Preface

xi

1. Genomic Imprinting in Plants: What Makes the Functions of Paternal and Maternal Genes Different in Endosperm Formation?	1
Takayuki Ohnishi, Daisuke Sekine, Tetsu Kinoshita	
1. Introduction	2
2. When Does Genomic Imprinting Occur?	4
3. Why Does Genomic Imprinting Occur?	6
4. How Does Genomic Imprinting Occur? Mechanisms of Genomic Imprinting	7
5. The Role of Genomic Imprinting in Plants: Function as a Reproductive Barrier	16
6. Perspectives	19
Acknowledgments	20
References	20
2. MicroRNAs and Epigenetics in Adult Neurogenesis	27
Tamami Wakabayashi, Ryo Hidaka, Shin Fujimaki, Makoto Asashima, Tomoko Kuwabara	
1. Effects of MicroRNAs on Neurogenesis	28
2. Neurogenesis Regulation by Specific miRNAs	30
3. Oligodendrocyte Differentiation and miRNAs	33
4. Astrocyte Differentiation and miRNAs	34
5. Impact of Environmental Factors on Adult Neurogenesis	35
6. miRNAs and Neuronal Disorders	37
References	39
3. An Epigenetic Switch of the Brain Sex as a Basis of Gendered Behavior in <i>Drosophila</i>	45
Kosei Sato, Daisuke Yamamoto	
1. Courtship Behavior of <i>Drosophila melanogaster</i>	46
2. <i>Fru</i> Is a Sex-Determination Gene	48
3. <i>Fru</i> Proteins as Putative Transcription Factors	50
4. <i>Fru</i> and <i>Dsx</i> Proteins Specify Sex Types of Single Neurons	51
5. The mAL Neural Cluster as a Model to Study Single-Cell Sex Differences	53
6. Chromatin Modification as a Plausible Mechanistic Basis for the Actions of <i>FruM</i>	54

7. FruM Plays a Role in the All-or-None Sex Switching of Single Neurons	56
8. Are the Two Stable States Attained by Graded Changes in FruM Activity?	56
9. Prospects	58
Acknowledgments	59
References	60
 4. Neural Transposition in the <i>Drosophila</i> Brain: Is It All Bad News?	65
Scott Waddell, Oliver Barnstedt, Christoph Treiber	
1. Introduction	65
2. Fruit Fly Transposons	67
3. Methods to Study Mobile Element Activity	71
4. Host Cell Defense Mechanisms	74
5. Impact of Transposons on the Host Cell	77
6. Timing of Transposon Activity	79
7. Transposons in Neurological Disease and Decline	81
8. Cellular Mosaicism and Behavioral Individuality	83
9. Is There Anything Good to Say?	84
Acknowledgments	85
References	85
 5. Fine-Tuning Notes in the Behavioral Symphony: Parent-of-Origin Allelic Gene Expression in the Brain	93
Laura J. Sittig, Eva E. Redei	
1. Epigenetics: Shaping Behavior	94
2. <i>Dio3</i> : A Case Study	96
3. Evolutionary Significance of Varied Allelic Expression in Brain	101
References	104
 6. Influencing the Social Group: The Role of Imprinted Genes	107
Gráinne I. McNamara, Anthony R. Isles	
1. Introduction	107
2. Regulation	109
3. Imprinted Genes Implicated in Social Behaviors	111
4. Imprinted Genes: Action or Reaction?	118
5. Summary and Conclusions	125
Acknowledgments	126
References	126

7. The Potential Role of SRY in Epigenetic Gene Regulation During Brain Sexual Differentiation in Mammals	135
Ryohei Sekido	
1. Introduction	136
2. SRY and Sex Determination	138
3. Sexual Differentiation in the Brain	139
4. Epigenetics of Brain Sexual Differentiation	144
5. Discussion	153
6. Perspectives	156
References	157
8. The Biological Basis of Human Sexual Orientation: Is There a Role for Epigenetics?	167
Tuck C. Ngun, Eric Vilain	
1. Introduction	168
2. The Genetics of Sexual Orientation	169
3. Epigenetics and Sexual Orientation in Humans	172
4. Molecular Mechanisms Underlying the Long-term Effects of Hormones	176
5. Conclusion	178
References	180
9. Repetitive Elements and Epigenetic Marks in Behavior and Psychiatric Disease	185
Miranda M. Darby, Sarven Sabuncuyan	
1. Repetitive Elements	189
2. Pathology of Transposition	197
3. Benefits of Transposition	199
4. Function of Repeat Elements in the Normal Brain and Behavior	203
5. Epigenetics	205
6. Summary and Conclusions	236
References	238
10. Epigenetic Modifications Underlying Symbiont-Host Interactions	253
Sassan Asgari	
1. Introduction	254
2. Unicellular Symbiotic Associations	255
3. Plant-Symbiont Associations	256

4. Coral-Algae Interaction	257
5. Insects	258
6. Vertebrate Gut Microbiota	264
7. MicroRNAs As Epigenetic Regulators of Symbiotic Associations	265
8. Conclusions	269
Acknowledgments	271
References	271
 11. Integrating Early Life Experience, Gene Expression, Brain Development, and Emergent Phenotypes: Unraveling the Thread of Nature via Nurture	277
Ian C.G. Weaver	
1. Early Life Development and Transmission of Phenotype	278
2. Epigenetic Control of Gene Expression: Molecules of Cellular Programming and Inheritance	280
3. The Primary Epigenetic Mark: Gene Silencing by DNA Methylation	281
4. DNA Methylation Reversed: Active DNA Demethylation in the Nervous System	283
5. Histone Modifications: Regulation of Chromatin Structure and Fine-Tuning of Gene Function	284
6. Interpretation of Epigenetic Modifications: Toward Cracking the Code	285
7. Epigenetic Marks: Linking Maternal Nutrition and Child Health and Beyond	286
8. Maternal Care and Epigenetic Programming of Phenotypic Differences in Behavior	288
9. Conserved Epigenetic Sensitivity to Early Life Experience in Humans: It is in Your Blood	291
10. Regulation of Synaptic Transmission, Neuronal Plasticity, and Cognitive Function	293
11. Influence of Chromatin Plasticity on Major Neuropsychiatric Disease	295
12. Concluding Remarks	297
Acknowledgments	298
Competing Interests Statement	298
References	298
