Foreword	xiii
Preface	xv

1. Fundamentals of Neurogenesis and Neural Stem Cell Development

Robert Beattie, Tanzila Mukhtar and Verdon Taylor

1.1	Neurulation: Formation of the Central Nervous System Anlage	1
1.2	Neurulation and Neural Tube Formation	1
1.3	Regionalization of the Mammalian Neural Tube	2
1.3.1	Molecular Basis of Regionalization	2
1.3.2	Structural Organization of Cellular Compartments and Boundaries in the Developing Neural Tube	4
1.4	Onset of Neurogenesis in the Telencephalon	4
1.5	The Transition of the Neurepithelium to Neural Stem Cells	4
1.5.1	Asymmetric versus Symmetric Cell Divisions	6
1.6	Progenitor Fate Commitment and Restriction	6
1.6.1	The Common Progenitor Model	6
1.6.2	Multiple Progenitor Model	6
1.7	Molecular Mechanisms of Neural Stem Cell Maintenance	7
1.7.1	Notch Signaling as a Key Regulator in Maintenance of NSCs	7
1.8	Interneuron Generation from the Ventral Telencephalon	8
1.9	Formation of the Cerebral Isocortex and Cortical Layering	9
1.10	Oligodendrogenesis and Astrogenesis	9
1.10.1	Human Neocortico-genesis	10
	References	11

2. A Brief Introduction to Neural Flow Cytometry from a Practical Perspective

Geoffrey W. Osborne

2.1	Introduction	15
2.2	What Is Flow Cytometry?	15

2.3	Challenges and Opportunities of Neural Flow Cytometry	17
2.4	Cell Sorting of Neural Cells—Step by Step	18
2.5	Flow Cytometric Analysis of NSCs	20
2.6	Flow Cytometry of Neurons	20
2.7	Flow Cytometric Analysis of Glial Cell Types	22
2.8	Conclusion	24
	References	24

3. CD36, CD44, and CD83 Expression and Putative Functions in Neural Tissues

Isaias Glezer, Serge Rivest and André Machado Xavier

3.1	Introduction	27
3.2	The Putative CD36 Functions in the CNS: A Multifunctional Scavenger Receptor and Lipid Sensor	27
3.2.1	CD36 Structure and General Functions	27
3.2.2	Cd36 Gene Expression Maps to Olfactory Relays and Reproductive Behavior-Associated Brain Regions	29
3.2.3	CD36 Functions in the Nervous System	29
3.3	The Expression of CD44 Adhesion Molecule in Neural Cells	30
3.3.1	CD44 Structure and General Functions	30
3.3.2	Constitutive Murine Cd44 Gene Expression Maps to Intralaminar Nuclei of the Thalamus and Few Other Limited Nuclei of the CNS	31
3.3.3	CD44 Glycoprotein Expression and Functions in the Nervous System	32
3.4	The Glycoprotein CD83	33
3.4.1	CD83 Structure and General Functions	33
3.4.2	Neuronal Cd83 Gene Expression is Widespread in Murine Brain, albeit Not Ubiquitous	34
3.4.3	Possible CD83 Functions in the Nervous System	34
3.5	Concluding Remarks	36
	References	36

4. Life and Death in the CNS: The Role of CD95

Si Chen, Robert Hermann, Enric Llorens-Bobadilla and Ana Martin-Villalba

4.1	Introduction	41
4.2	CD95 Expression in the Healthy and Diseased Brain	42
4.2.1	CD95 Expression in the Developing and Healthy Adult Brain	42
4.2.2	CD95 Expression after Brain Injury	43
4.2.3	CD95 Expression in Brain Tumors	43
4.2.4	Controversies Regarding CD95 Detection	43
4.3	Functions and Signaling of CD95 in the CNS	43
4.3.1	CD95-Mediated Neurite Growth in Neurons	43
4.3.2	Functional Relevance of CD95 in the Injured CNS	44
4.3.3	Role of CD95 in Neural Progenitors	45
4.3.4	Multifaceted Functions of CD95 in Brain Tumors	46
4.4	Conclusions	51
	References	51

5. Role of Fundamental Pathways of Innate and Adaptive Immunity in Neural Differentiation: Focus on Toll-like Receptors, Complement System, and T-Cell-Related Signaling

Hélène Boudin and Antoine Louveau

5.1	Molecules from Innate Immunity	55
5.1.1	Toll-Like Receptors	55
5.1.2	Complement System	58
5.2	Molecules from Adaptive Immunity	59
5.2.1	Major Histocompatibility Complex Molecules	59
5.2.2	Costimulatory Molecules	60
5.2.3	CD3 ζ	60
5.3	Conclusion	62
	References	62

6. Neuropilins in Development and Disease of the Nervous System

Mathew Tata, Miguel Tillo and Christiana Ruhrberg

6.1	Introduction	65
6.2	Neuropilins Associate with Plexins to Mediate Semaphorin Signaling	65
6.3	Neuropilins and Plexins Cooperate to Confer Specificity to Semaphorin Signaling	66
6.4	Neuropilin-Mediated Repulsion in Axon Guidance	66

6.5	Neuropilins Can Mediate Attractive Responses by Axons to Semaphorins	67
6.6	Neuropilins Organize Axon Projections to Provide a Substrate for Migrating Neurons	67
6.7	Semaphorin Signaling through Neuropilins in Neurons Promotes Neuronal Migration	67
6.8	VEGF-A as an Alternative Neuropilin Ligand in the Nervous System	68
6.9	Differential VEGF-A Isoform Affinity for the Two Neuropilins	68
6.10	VEGF-A Signaling through Neuropilin 1	68
6.11	NRP1 in CNS Angiogenesis	70
6.12	VEGF-A/NRP1 Signaling Promotes Contralateral Axon Projection across the Optic Chiasm	70
6.13	VEGF-A Signals through NRP1 to Promote Neuronal Migration	70
6.14	Semaphorin Signaling through NRP1 Impairs CNS, but not PNS Regeneration	71
6.15	VEGF Signaling through NRP1 Promotes Survival of Developing Neurons	71
6.16	Neuropilin in Synaptogenesis and Plasticity	71
6.17	Outlook	72
	References	72

7. Growth and Neurotrophic Factor Receptors in Neural Differentiation and Phenotype Specification

Talita Glaser, Ágatha Oliveira, Laura Sardà-Arroyo and Henning Ulrich

7.1	Introduction	77
7.2	Neurotrophins	77
7.3	Nerve Growth Factor	79
7.4	Brain-Derived Neurotrophic Factor	82
7.5	Neurotrophin-3	82
7.6	Epidermal Growth Factor	83
7.7	Fibroblast Growth Factor	83
7.8	Glial Cell Line-Derived Neurotrophic Factor	84
7.9	Insulin-like Growth Factor	85
7.10	Conclusion	86
	References	86

8. Glycolipid Antigens in Neural Stem Cells

Yutaka Itokazu and Robert K. Yu

8.1	Introduction	91
8.1.1	Glycosphingolipids and Development	91
8.1.2	Gangliosides	91

8.2	Stage-Specific Embryonic Antigen-1 (CD15)	93
8.2.1	SSEA-1 in Early Embryogenesis	93
8.2.2	SSEA-1 in Neural Stem Cells	94
8.2.3	SSEA-1 and Integrin	94
8.2.4	SSEA-1 and Notch Signaling	95
8.3	SSEA-4	95
8.4	GD3 Ganglioside	95
8.4.1	GD3 as a Specific Marker for NSCs	95
8.4.2	GD3-Synthase-KO NSCs	95
8.4.3	GD3 and Endocytosis	96
8.5	9-O-acetyl GD3	96
8.6	GM1 Ganglioside	96
8.6.1	GM1 and Its Epigenetic Regulation	96
8.6.2	Integrin-Focal Adhesion Kinase Signaling	97
8.7	The C-series Gangliosides	97
8.8	GalCer and Sulfatide	97
8.9	Sialosyl Galactosylceramide	97
8.10	Phosphatidylglucoside	98
8.11	Conclusions and Prospective Studies	98
	Acknowledgments	99
	References	99

9. NG2 (Cspg4): Cell Surface Proteoglycan on Oligodendrocyte Progenitor Cells in the Developing and Mature Nervous System

Akiko Nishiyama, Aaron Lee and Christopher B. Brunquell

9.1	Introduction	103
9.2	The Structure of NG2	103
9.2.1	NG2 in Different Species	104
9.3	Expression of NG2 in the Nervous System	105
9.3.1	NG2 in the Central Nervous System	105
9.3.2	NG2 in the Peripheral Nervous System	106
9.4	The Role of NG2 in Cell Attachment and Migration	106
9.5	The Role of NG2 in Axon-NG2 Cell Interactions	107
9.5.1	NG2 and Developing Axons	107
9.5.2	NG2 and Axons in the Injured CNS	107
9.6	The Role of NG2 in Cell Proliferation	108
9.7	The Role of NG2 in Intracellular Signaling	109
9.7.1	Activation of Rho Family GTPases	109
9.7.2	Extracellular Signal-Regulated Kinase Signaling	109
9.7.3	Akt Signaling	110
9.8	Concluding Remarks	110
	References	110

10. Comprehensive Overview of CD133 Biology in Neural Tissues across Species

József Jászai, Denis Corbeil and Christine A. Fargeas

10.1	Introduction	113
10.1.1	CD133	113
10.1.2	Detecting Mammalian (Mouse and Human) CD133	115
10.1.3	CD133: A Unique Cell Surface Antigen for Cell-Based Therapy and Tissue Engineering	117
10.2	Cell Biology of CD133 Protein in the Nervous System	117
10.2.1	CD133 ⁺ Membrane Particles	117
10.2.2	Symmetric versus Asymmetric Distribution of CD133	118
10.3	Compartmentalization of CD133 in Mammalian Neural Tissues	118
10.3.1	Developing Mammalian Brain	119
10.3.2	Adult Mammalian Brain	119
10.4	CD133 ⁺ Neural Stem and Progenitor Cells across Species	120
10.5	CD133 ⁺ Cells and Regeneration	122
10.6	CD133 and Neural Diseases	122
10.7	CD133 and Photoreceptor Neuron Morphogenesis	123
	Acknowledgments	124
	References	124

11. Fundamentals of NCAM Expression, Function, and Regulation of Alternative Splicing in Neuronal Differentiation

Ana Fiszbein, Ignacio E. Schor and Alberto R. Kornblihtt

11.1	Introduction	131
11.2	NCAM Gene and Alternative Splicing Isoforms	131
11.3	Molecular Structure and Function of NCAM	133
11.4	Alternative Splicing Regulation	134
11.5	Chromatin Structure Regulates Alternative Splicing	135
11.6	Background in NCAM Alternative Splicing Regulation	136
11.7	Regulation of NCAM Alternative Splicing by Chromatin Changes in Neuronal Differentiation	136
11.8	Conclusions	137
	Acknowledgments	138
	References	138

12. Role of the Clustered Protocadherins in Promoting Neuronal Diversity and Function

Takeshi Yagi

12.1 Introduction	141
12.2 The Cadherin Superfamily and the Clustered Pcdhs	141
12.3 Genomic Structures of the Clustered Pcdh Genes	142
12.4 Gene Expression of the Clustered Pcdhs	143
12.5 Gene Regulation of the Clustered Pcdhs	144
12.6 Cell Adhesion Activity of the Clustered Pcdhs	147
12.7 Cell Signaling Mediated by the Clustered Pcdhs	147
12.8 Roles of Clustered Pcdhs in the Nervous System	148
12.9 Conclusions	148
References	149

13. β 1-Integrin Function and Interplay during Enteric Nervous System Development

Sylvie Dufour, Florence Broders-Bondon and Nadège Bondurand

13.1 Introduction	153
13.2 Functions of the ECM and Integrins during ENS Development	154
13.2.1 ECM and Integrin Expression during ENS Development	154
13.2.2 Integrin Function during ENCC Migration and ENS Development	155
13.3 Effectors of the Integrin Signaling Pathway during ENS Development	156
13.3.1 Phactr-4 and Integrin Signaling	156
13.3.2 Role of Phosphatase and Tensin Homolog	157
13.3.3 Roles of Integrin-Linked Kinase and Pinch	157
13.3.4 Role of FAK	158
13.4 β 1-Integrin Crosstalk with ENS Genes and N-Cadherin during ENS Development	158
13.4.1 Interplay between β 1-Integrins and SOX10	158
13.4.2 β 1-Integrins and GDNF/RET Crosstalk	158
13.4.3 β 1-Integrins and N-Cadherin Crosstalk	159
13.5 Control of Integrin Gene Expression	161
13.5.1 Organization of 5' Regions/Promoters	161

13.5.2 Control of Integrin Gene Expression by SP1 and Interacting TFs	161
13.5.3 Control of Integrin Gene Expression by other TFs	161
13.5.4 Posttranscriptional Control of Integrin Expression by MicroRNAs	162

13.6 Conclusion	162
References	162

14. Neural Flow Cytometry – A Historical Account from a Personal Perspective

Henry J. Klassen

14.1 Surface Markers on Neural Progenitor Cells	168
14.2 CD15	169
14.3 CD133	169
14.4 GD2 Ganglioside	169
14.5 Tetraspanins: CD9 and CD81	169
14.6 MHC	170
14.7 Fas/CD95	171
14.8 Retinal Progenitor Cells	171
14.9 Further Studies of Surface Markers	171
14.10 Conclusions	171
References	172

15. Multimarker Flow Cytometric Characterization, Isolation and Differentiation of Neural Stem Cells and Progenitors of the Normal and Injured Mouse Subventricular Zone

Krista D. Buono, Matthew T. Goodus, Lisamarie Moore, Amber N. Ziegler and Steven W. Levison

15.1 Introduction	175
15.2 Neural Stem Cells and Progenitors	175
15.3 Flow Cytometric Studies on Neural Precursors – Technical Considerations	176
15.4 Flow Cytometry Studies of the Fetal Mouse Forebrain	178
15.5 Studies Using Flow Cytometry on the Neonatal SVZ	178
15.6 Studies Using Flow Cytometry on the Adult SVZ	181
15.7 Using Flow Cytometry to Evaluate Effects of Cytokines and Growth Factors on Neural Precursors	182
15.8 Using Flow Cytometry to Evaluate Effects of Neurological Injuries and Diseases on Neural Precursors	183
15.9 Using Flow Cytometry to Better Understand Glioblastoma	184
15.10 Conclusion	184
References	185

16. Multiparameter Flow Cytometry Applications for Analyzing and Isolating Neural Cell Populations Derived from Human Pluripotent Stem Cells

Nil Emre, Jason G. Vidal, Christopher Boyce, Lissette Wilensky, Mirko Corselli and Christian T. Carson

16.1	Introduction	187
16.2	Methods for Neural Differentiation of Human Pluripotent Stem Cells	187
16.3	Cell Surface Signatures for Neural Cell Isolation from Pluripotent Stem Cells	188
16.4	Neural Applications for Multiparameter Flow Cytometry	190
16.4.1	Neural Fate Determination	190
16.4.2	In vitro Disease Modeling	190
16.5	Cell Transplantation	192
16.6	The Detection of Intracellular Antigens by Flow Cytometry	192
16.7	The Utility of Flow Cytometry for Analyzing Human PSC-Derived Neural Cells	193
16.8	Cell Surface Marker Screening Applications for Nonneural Stem Cell Populations	193
16.9	Pluripotent Stem Cells and Their Derivatives	194
16.10	Adult Stem Cells	195
16.11	Cancer Stem Cells	195
16.12	Conclusions and Future Considerations	196
	References	196

17. Flow-Cytometric Identification and Characterization of Neural Brain Tumor-Initiating Cells for Pathophysiological Study and Biomedical Applications

Sujeivan Mahendram, Minomi K. Subapanditha, Nicole McFarlane, Chitra Venugopal and Sheila K. Singh

17.1	Introduction to Neural Stem Cells	199
17.2	Tumors of the Central Nervous System	199
17.2.1	Glioblastoma Multiforme	200
17.2.2	Medulloblastoma	200
17.3	Cancer Stem-Cell Hypothesis	201
17.4	Brain Tumor Initiating Cells	201
17.5	Identification of Neural Surface Antigens	201
17.5.1	CD133	201
17.5.2	CD15	202
17.5.3	CD271	202

17.5.4	High Aldehyde Dehydrogenase Activity	203
--------	--------------------------------------	-----

17.6	Flow-Cytometric Identification and Characterization	203
17.7	Limitations of Current CSC Markers	204
17.7.1	Hypoxia	204
17.7.2	Cell Dissociation Methods	205
17.7.3	Dynamic Growth	206
17.8	Applications of Functional BTIC Assays	206
17.8.1	Neurosphere Formation	206
17.8.2	In vivo Serial Transplantation	207
17.9	Conclusion	208
	References	208

18. Using Cell Surface Signatures to Dissect Neoplastic Neural Cell Heterogeneity in Pediatric Brain Tumors

Tamra Werbowetski-Ogilvie

18.1	Cell Surface Markers to Distinguish Heterogeneity in the Neural Lineage Hierarchy	213
18.2	Medulloblastoma: An Example of Genomic, Molecular, and Cellular Heterogeneity	214
18.3	The CSC Hypothesis and Brain Tumors	214
18.4	In Search of New Markers: The Case for CD271/p75NTR	215
18.5	CD271: Its Role in Neurodevelopment and Progenitor/Stem Cell Function	216
18.6	Extending beyond CD133: Using High-Throughput Flow Cytometry to Identify Novel Markers of Neural Tumor Cell Phenotypes	218
18.7	Clinical Implications of Cell Surface Signatures in MB and Other Brain Tumor Pathologies	218
	References	219

19. Synopsis and Epilogue: Neural Surface Antigen Studies in Biology and Biomedicine—What We Have Learned and What the Future May Hold

Jan Pruszk

19.1	Introduction	223
19.2	Progress in Neural Stem Cell and Cancer Biology Hinges Upon Understanding Cell–Cell Interactions	223
19.3	Neural Flow Cytometry and Cell Isolation Are Tricky, but Feasible	224
19.4	Neural Surface Antigens Are Critical Mediators of Cellular Crosstalk in Neurobiology	224

19.5 Expression of Even Some of the Better-Characterized Neural Surface Antigens Is Exceedingly Complex	225	19.8 What's Around the Corner?	226
19.6 Toward an Integrated View of Neural Surface Antigen Signaling	226	19.9 Conclusion	227
19.7 Neural Surface Antigens Serve as Valuable Markers for Cell Analysis and Cell Selection	226	Acknowledgments	227
		References	227
		Index	229
18. Using Cell Surface Signatures to Dissect Neoplastic Neural Cell Heterogeneity in Pediatric Brain Tumors	228	17. Flow-Cytometric Identification and Characterization of Neural Brain Tumor-Initiating Cells for Pathophysiological Study and Biomedical Applications	229
18.1 Introduction	228	17.1 Introduction to Neural Stem Cells	229
18.2 Methods for Neural Differentiation of Human Pluripotent Stem Cells	228	17.2 Tumors of the Central Nervous System	230
18.3 Cell Surface Signatures for Neural Cell Isolation from Pluripotent Stem Cells	228	17.3.1 Glioblastoma Multiforme	230
18.4 Neural Applications for Multiparameter Flow Cytometry	229	17.3.2 Medulloblastoma	230
18.5 Neural Fate Determination	229	17.3.3 Cancer Stem-Cell Hypothesis	230
18.6 In vitro Disease Modeling	229	17.4 Brain Tumor-Initiating Cells	230
18.7 Cell Transplantation	229	17.5 Identification of Neural Surface Antigens	230
18.8 The Detection of Intracellular Antigens by Flow Cytometry	229	17.5.1 CD133	230
18.9 The Utility of Flow Cytometry for Analyzing Human TSC-Derived Neural Cells	229	17.5.2 CD15	230
18.10 Cell Surface Marker Screening	229	17.5.3 CD25	230
18.11 Applications for Nonneural Stem Cell Populations	229		
18.12 Pluripotent Stem Cells and Their Derivatives	229		
18.13 Adult Stem Cells	229		
18.14 Cancer Stem Cells	229		
18.15 Conclusions and Future Considerations	229		
18.16 References	229		
18.17 Clinical Implications of Cell Surface Signatures in MB and Other Brain Tumor Pathologies	229		
18.18 Cell Phenotypes	229		
18.19 Identity Novel Marker of Neural Tumor	229		
18.20 High-Throughput Flow Cytometry to Extending beyond CD133: Using	229		
18.21 and Prolongation Stem Cell Function	229		
18.22 CD133: Its Role in Neurodevelopment	229		
18.23 for CD133/PSNTR	229		
18.24 In Search of New Markers: The Case	229		
18.25 The CSC Hypothesis and Brain Tumors	229		
18.26 Genomic Molecular and Cellular Heterogeneity	229		
18.27 Medulloblastoma: An Example of Heterogeneity	229		
18.28 Medulloblastoma: A Heterogeneous Malignancy	229		
18.29 Heterogeneity in the Neural Lineage	229		
18.30 Cell Surface Markers to Distinguish	229		
18.31 Tumor Widespread-Origins	229		
18.32 Using Cell Surface Signatures to Dissect Neoplastic Neural Cell Heterogeneity in Pediatric Brain Tumors	229		
19. Synopsis and Epilogue: Neural Surface Antigen Studies in Biology and Biomedicine—What We Have Learned and What the Future May Hold	230		
19.1 Introduction	230		
19.2 Progress in Neural Stem Cell and Cancer Biology Hinges Upon	230		
19.3 Understanding Cell-Cell Interactions	230		
19.4 Neural Flow Cytometry and Cell Isolation Are Feasible	230		
19.5 Neural Surface Antigens Are Critical	230		
19.6 Mediators of Cellular Crosstalk in Neurobiology	230
