1. Epigenetic Regulation of Open Chromatin in Pluripotent Stem Cells

H. Kobayashi, M. Lowe and N. Kikyo

Abbreviations	1
Introduction	2
Chromatin Decondensation at the Microscopic Level	2
Permissive Transcription	4
Chromatin Remodeling Complexes	4
Histone Modifications	5
DNA Methylation	6
Noncoding RNAs	7
Dynamic Movement of Chromatin Proteins	8
Nucleosome Accessibility and Positioning	9
Long-range Chromosomal Interactions	10
Future Perspectives	11
Acknowledgment	13
References	13

2. RNA Epigenetics (Epitranscriptomics)

N. Liu and T. Pan

Abbreviations	19
Introduction	19
Techniques Used to Study m ⁶ A in mRNA/lncRNA	21
m ⁶ A Writers	23
m ⁶ A Erasers	24
m ⁶ A Readers	24
m ⁶ A Switches	26
m ⁶ A Modification in Human Health and Disease	26
RNA Epigenetics Beyond m ⁶ A in mRNA/lncRNA	28
Concluding Remarks	29
Acknowledgments	30
References	30

3. The Nucleosome Remodeling and Deacetylase Complex in Development and Disease

J. Basta and M. Rauchman

Introduction	37
NuRD Biochemistry	41
Overview	41
NuRD Complex Structure and Assembly	43
Regulation of NuRD Activity	45
NuRD and ES Cells	46
Overview	46
MBD3 and ES Cells	46
Regulation of Pluripotency Versus Differentiation	47
Reprogramming Somatic Cells to Pluripotent Stem Cells	50
NuRD and Embryonic Development	52
Overview	52
Hematopoiesis	52
Formation of the Kidney	53
Formation of the Heart	54
Neural Development	54
NuRD and Human Birth Defect Syndromes	55
NuRD and Cancer	56
Overview	56
Breast Cancer	56
Uterine Cancer	58
Glioblastoma	59
Disrupting NuRD Association with Its Cofactors:	
A Potential Therapeutic Strategy	59
DNA Damage Response and Genome Integrity	60
Overview	60
Role of NuRD in DNA Repair Mechanisms	60
NuRD and Alternative Telomere Lengthening	62
NuRD and Aging	63
Conclusions	63
References	64

4. Epigenetics and Muscle Dysfunction in Chronic Obstructive Pulmonary Disease

E. Barreiro

Introduction	73
Skeletal Muscle Dysfunction in COPD	74
Multifactorial Etiology of Muscle Dysfunction in COPD	76
Peripheral Muscle Dysfunction	76
Respiratory Muscle Dysfunction	77
Epigenetic Events in Cells and Tissues	78
Development of Skeletal Muscle Fibers	80
Epigenetic Regulation in Normal Skeletal Muscles	81

Epigenetic Regulation in Skeletal Muscles of COPD Patients	83
Lower Limb Muscles	83
Respiratory Muscles	87
Systemic Levels of Muscle-Enriched miRNAs in COPD	89
Conclusions and Future Perspectives	89
Acknowledgments	90
References	90
5. Clinical Epigenetics of Lung Cancer	
<i>S.M. Langevin and K.T. Kelsey</i>	
Lung Cancer	97
Epigenetic Landscape of Lung Cancer	99
DNA Methylation	99
Histone Modifications	102
Noncoding RNA	104
Common Somatic Mutations in Epigenetic Regulators	106
Epigenetic Biomarkers for Lung Cancer	106
Biomarkers for Early Detection and Diagnosis	106
Prognostic Biomarkers in Early-Stage Lung Cancer	109
Epigenetic Therapy	110
Emerging Epigenetic Therapies	111
Dose De-Escalation	118
Timing of Treatment: Epigenetic Priming Versus Concurrent Administration	118
Pharmacoepigenetics	119
Summary	119
References	120
6. Epigenetics in Cardiovascular Disease	
<i>S. Aslibekyan, S.A. Claas and D.K. Arnett</i>	
Abbreviations	135
Introduction	136
Epigenetic Mechanisms in CVD	137
DNA Methylation	137
Histone Modifications	141
RNA-based Mechanisms	141
Translating Epigenetic Findings to Improved Outcomes	142
Conclusions and Future Directions	145
References	147
7. Epigenetics and Arterial Hypertension: Evidences and Perspectives	
<i>S. Friso, C.A. Carvajal, F. Pizzolo, C.E. Fardella and O. Olivieri</i>	
Abbreviations	159
Introduction	159

Arterial Hypertension and Epigenetics	159
Epigenetic Regulation Through DNA Methylation, Histone Modification, and MicroRNA	161
Global DNA Methylation in Hypertension	161
DNA Hydroxymethylation and Hypertension	163
Gene-Specific DNA Methylation in Hypertension	165
Histone Modifications and AH	170
Noncoding RNAs and AH	172
Conclusions	177
References	177
 8. Epigenetics in Chronic Pain	
<i>G. Bai, K. Ren and R. Dubner</i>	
Abbreviations	185
Introduction	186
DNA Methylation and Demethylation	188
DNA Methylation	188
Demethylation	188
Evaluation of DNA Methylation	189
Function of Methylated DNA	191
Preclinical Studies of DNA Methylation in Chronic Pain	192
Clinical Studies of DNA Methylation in Chronic Pain	196
Chromatin Remodeling	197
General Background	197
Evaluation of Chromatin Remodeling	197
Preclinical Studies	198
Clinical Studies	204
Noncoding RNA	204
MicroRNAs	205
Other ncRNAs	210
Summary and Future Directions	210
Acknowledgments	212
References	212
 9. Epigenomics of Alzheimer's Disease	
<i>D.A. Bennett, L. Yu, J. Yang, H.-U. Klein and P.L. De Jager</i>	
Abbreviations	227
Aging and Dementia	228
Clinical and Neuropathologic Features of AD	229
Clinical Manifestations	229
Pathologic Features of AD	229
Mixed Disease, AD Dementia and MCI	230
Heritability of AD	230
Family Studies	230
Twin Studies	231

Genetics of AD	231
Mutations and Cytogenetic Alterations	231
Polymorphisms	231
Biologic Mechanisms Linking Genomic Risk Factors to AD	232
Epigenetics of AD	233
DNA Methylation	233
Histone Acetylation	248
MicroRNA	254
Future Directions	255
Acknowledgments	262
References	262
 10. Prospective Epigenetic Paradigms and Models for Cellular Senescence and Epithelial–Mesenchymal Transition in Organismal Development and Aging	
<i>S. Kishi, P.E. Bayliss and J. Hanai</i>	
Introduction	280
EMT Versus MET in Development, Cancer, and Senescence	281
Importance of Epigenetic Transition and Conversion in “Rejuvenative Senescence”	283
Transcription Factors as Epigenetic Driving Forces Between EMT and MET in Cellular Senescence and Aging	284
Developmental Senescence and Biochronological Aging via the Pathophysiological EMT–MET Process in Epigenesis	286
New Paradigms of Basic Biological Models for The EMT–MET Process and Epigenetics	288
Concluding Remarks to Aim Future Therapeutic Interventions by Epigenetics on Aging	291
Acknowledgments	292
References	293
 Index	 299
