Preface

xxiii

1. Epigenetic Regulation by ATP-Dependent Chromatin-Remodeling Enzymes: SNF-ing Out Crosstalk 1

John S. Runge, Jesse R. Raab, and Terry Magnuson

- 1. Introduction 2
- 2. Remodeler Localization Genome-Wide 4
- 3. Accessory Subunits in Remodeler Activities 7
- 4. Conclusion 11
- References 11

2. Sea Urchin Morphogenesis 15

David R. McClay

- 1. Skeletal Patterning 20
- 2. Ectodermal Patterning Inputs 22
- References 26

3. Development of the Mammalian Kidney 31

Andrew P. McMahon

- 1. Structure-Function: An Overview of the Anatomy and Function of the Kidney 32
- 2. From Progenitors to Products: Assembling the Kidney 35
- 3. Man Versus Mouse 51
- 4. Translating Development Biology: Regenerative Approaches to Kidney Disease 53
- Acknowledgments 54
- References 54

4. Applied Developmental Biology: Making Human Pancreatic Beta Cells for Diabetics 65

Douglas A. Melton

5. The Dishevelled Protein Family: Still Rather a Mystery After Over 20 Years of Molecular Studies	75
Marek Mlodzik	
1. The Many Functions of Dishevelled's	76
2. Molecular Features and Interactions of Dishevelled	78
3. Kinases Associated with Dsh	81
4. Cellular Levels of Dsh and Redundancy in the Mouse Model	83
5. A Ciliary Function of Dsh	85
6. Other Functions of Dsh Family Members?	86
7. Concluding Remarks	87
Acknowledgments	88
References	88
6. When Family History Matters: The Importance of Lineage Analyses and Fate Maps for Explaining Animal Development	93
Steven L. Klein and Sally A. Moody	
1. The Advent of Analyzing Cell Fates	95
2. Creating Fate Maps	98
3. Lineage Mapping of Identified Founder Cells	101
4. Clonal Fate Maps	103
5. What Have We Learned?	108
Acknowledgments	108
References	109
7. Frizzled Receptors in Development and Disease	113
Yanshu Wang, Hao Chang, Amir Rattner, and Jeremy Nathans	
1. Introduction	114
2. Frizzled1, Frizzled2, and Frizzled7	116
3. Frizzled5 and Frizzled8	119
4. Frizzled9 and Frizzled10	120
5. Frizzled4	121
6. Frizzled3 and Frizzled6	126
7. Conclusion	131
Acknowledgments	132
References	132
8. The Developmental Genetics of Vertebrate Color Pattern Formation: Lessons from Zebrafish	141
Uwe Irion, Ajeet Pratap Singh, and Christiane Nüsslein-Volhard	
1. Introduction	142
2. The Striped Color Pattern of Zebrafish	146

3. Stripe Formation, a Self-organizing Process Involving the Interaction of All Three Cell Types	150
4. Developmental Origin of the Three Pigment Cell Types	152
5. Formation of a Series of Light and Dark Stripes by Patterned Aggregation of Iridophores	152
6. Genetic and Molecular Regulation of Color Pattern Formation	156
7. The Role of Tissue Environment in Regulating Color Pattern Formation	160
8. Evolution of Color Patterns	162
References	164
9. Defining "Development"	171
Thomas Pradeu, Lucie Laplane, Karine Prévot, Thierry Hoquet, Valentine Reynaud, Giuseppe Fusco, Alessandro Minelli, Virginie Orgogozo, and Michel Vervoort	
1. Introduction	172
2. Should We Try to Define "Development"? No, We Should Not	174
3. Should We Try to Define "Development"? Yes, We Should	175
4. Analysis of a Few Possible Definitions of "Development"	179
5. Conclusion	181
Acknowledgments	181
References	181
10. Concepts of Cell Lineage in Mammalian Embryos	185
Virginia E. Papaloannou	
1. Introduction	185
2. How to Trace Cell Lineage	187
3. The Classic Experimental Embryology Approach	188
4. The Rise of "Applied" Genetic Markers	190
5. Further Refinements for Gene Expression Lineage Tracing	192
6. Clonal Analysis Within Cell Lineages	193
7. Mutant Effects on Cell Lineage	194
8. Final Thoughts	195
Acknowledgments	196
References	196
11. Small Peptides as Newcomers in the Control of <i>Drosophila</i> Development	199
J. Zanet, H. Chanut-Delalande, Serge Plaza, and Francios Payre	
1. Introduction	200
2. CRP Peptides: From Early Discovery to Genome-Wide Profiling	201

3. The Pgc smORF Peptide Protects the Germline from Embryonic Transcriptional Activation	203
4. Control of Calcium Intracellular Trafficking by Regulatory Small Peptides	205
5. Multiple Functions of Mlpt/Tal/Pri smORF Peptides in the Control of Insect Development	207
6. Insights into the Molecular Function of Pri Peptides	211
7. Conclusions and Future Challenges	212
Acknowledgments	214
References	214
12. Toward a Systems Understanding of Signaling Pathway Function	221
David P. Doupé and Norbert Perrimon	
1. Introduction	221
2. Pathways as Complex Networks	222
3. Temporal Properties of Signal Transduction	225
4. Spatial Regulation of Signal Transduction	227
5. The Importance of Context	230
6. Conclusion	232
Acknowledgments	233
References	233
13. Implications of Developmental Gene Regulatory Networks Inside and Outside Developmental Biology	237
Isabelle S. Peter and Eric H. Davidson	
1. Implications for Causality in Developmental Biology	240
2. Why Should a Developmental Biologist Care about Gene Regulatory Networks?	241
3. Implications for Cross-Species Comparative Analysis of Apparently Homologous Developmental Processes	245
4. Implications for How Body Plans Evolve	246
5. Implications for Regulatory Genomics	249
Acknowledgments	250
References	250
14. Evo-Devo: Discovery of Diverse Mechanisms Regulating Development	253
Alys M. Cheatle Jarvela and Leslie Pick	
1. Discovery of <i>Hox</i> Genes Changed the Field of Developmental Biology	254
2. Conservation of <i>Hox</i> Genes Led to Identification of Other Families of Conserved Regulatory Genes	256

3. A Conserved "Genetic Toolkit" Controls the Development of Diverse Species	257
4. Understanding the Enormous Biodiversity on Our Planet Requires New Approaches	261
5. Lineage-Specific Genes Remain Understudied	263
6. Even for Model Systems, Much Remains to Be Learned	265
7. Life Beyond the Model System	266
8. More Variation Than Expected: Conserved Traits Controlled by Different Genes and Old Genes Take on New Functions	268
9. Concluding Remarks	270
Acknowledgments	270
References	270
15. Making the Mouse Blastocyst: Past, Present, and Future	275
Janet Rossant	
1. Introduction	275
2. What Is the Later Fate of the Inner Cell Mass and Trophectoderm?	276
3. What Is the Later Fate of the Epiblast and Primitive Endoderm?	277
4. What Is the Mechanism that Drives the Formation of the ICM and the TE?	280
5. What Are the Mechanisms Driving Segregation of EPI and PE Within the ICM?	284
6. Conclusions	285
Acknowledgments	286
References	286
16. Two Decades of Ascidian Developmental Biology: A Personal Research Story	289
Noriyuki Satoh	
1. Muscle Determinant	289
2. Timing Mechanisms	291
3. Marine Biological Laboratory at Woods Hole	292
4. From <i>Halocynthia</i> to <i>Ciona</i>	293
5. <i>Ciona</i> Genome Project	294
6. The <i>Ciona</i> System with a Mass of Gene Expression Data	297
7. On the Origin of Chordates	297
Acknowledgment	299
References	299

17. Lineage Segregation in the Totipotent Embryo	301
Guangming Wu and Hans R. Schöler	
1. Introduction	301
2. Establishment of Totipotency and Pluripotency	302
3. The First Lineage Segregation	305
References	313
 18. The Complexities and Unexpected Insights of Developmental Genetic Analysis	 319
Trudi Schupbach	
 19. Homeodomains, Hedgehogs, and Happiness	 331
Matthew P. Scott	
 20. Turning One Cell Type into Another	 339
Jonathan M.W. Slack	
1. Introduction	339
2. Changing Cell Type in Early Embryos	340
3. Changing and Not Changing Cell Types in Regeneration	345
4. Naturally Occurring Changes of Cell Type	347
5. Changing Cell Type by Brute Force	350
6. Conclusions	353
References	355
 21. Mechanotransduction During Vertebrate Neurulation	 359
Sergei Y. Sokol	
1. Introduction	359
2. Forces Operating During Vertebrate Neural Tube Closure	360
3. Morphogenetic Forces are Generated by Coordinated Cell Polarization	363
4. Mechanical Stresses can Shape Cells and Create Tissue Polarity	366
5. Regulation of Transcription by Mechanotransduction During Neurulation	368
Acknowledgments	371
References	371

22. Preformation Versus Epigenesis in Early Mammalian Development	377
Davor Solter	
1. Introduction	378
2. Egg Asymmetry and How It Affects the First Cleavage Division	381
3. Is There Evidence for Prepatterning in Development from the 2-Cell Stage to Blastocyst?	385
4. CODA	388
Acknowledgments	389
References	389
23. A Thousand and One Receptor Tyrosine Kinases: Wherein the Specificity?	393
Harish N. Vasudevan and Philippe Soriano	
1. Introduction	393
2. Starting at the Receptor: Multifunctional Phosphotyrosines	395
3. Intracellular Signaling Dynamics: All Roads Lead to ERK	398
4. One Context, Two Receptors, Two Responses: PDGF and FGF in the Midface	400
5. Concluding Remarks	401
Acknowledgments	403
References	403
24. The Carnegie Department of Embryology at 100: Looking Forward	405
Allan C. Spradling	
25. Organ Function as a Modulator of Organ Formation: Lessons from Zebrafish	417
Michelle M. Collins and Didier Y.R. Stainier	
1. Introduction	418
2. Overview of Heart Formation in Zebrafish	419
3. Intracardiac Forces That Are Required to Shape the Heart	421
4. Extracardiac Forces and Their Function During Heart Development	426
5. How Does Force Affect Formation?	427
6. Implications for Human Heart Development and Disease	428
7. Summary	429
Acknowledgments	430
References	430

26. Organizers in Development	435
Claire Anderson and Claudio D. Stern	
1. The "Spemann Organizer"	436
2. The Notochord and Floor Plate	439
3. Organizers and Brain Patterning	441
4. Patterning the Limb	444
5. Spemann's Experiments on the Lens	445
6. Common Features Between Organizers?	446
7. Conclusions	447
Acknowledgment	449
References	449
27. The Soft Touch: Low-Affinity Transcription Factor Binding Sites in Development and Evolution	455
Justin Crocker, Ella Preger-Ben Noon, and David L. Stern	
1. Introduction	456
2. Theory for the Role of Low-Affinity Binding Sites	456
3. Early Evidence for the Role of Low-Affinity Binding Sites	457
4. Functional Evidence for the Importance of Low-Affinity Binding Sites from Development	458
5. Genomic Evidence for the Importance of Low-Affinity Binding Sites	459
6. Potential Reasons for Abundance of Low-Affinity Transcription Factor Binding Sites	461
7. Clusters of Low-Affinity Binding Sites Can Lead to Rapid Evolution of Enhancers	464
8. Conclusions	465
Acknowledgments	466
References	466
28. Developmental Competence for Primordial Germ Cell Fate	471
Ufuk Günesdogan and M. Azim Surani	
1. Introduction	472
2. Acquisition of Developmental Competence	473
3. Interplay of Signaling Pathways	478
4. Combinatorial Action of Transcription Factors	481
5. Transcriptional Enhancer Elements	485
6. Concluding Remarks	489
Acknowledgments	489
References	490

29. Formation of the Embryonic Head in the Mouse: Attributes of a Gene Regulatory Network	497
Patrick P.L. Tam, Nicolas Fossat, Emilie Wilkie, David A.F. Loebel, Chi Kin Ip, and Mirana Ramialison	
1. Assembling the Progenitor Tissues of the Embryonic Head	498
2. Signaling Activity and Tissue Patterning	500
3. Lhx1: A Transcriptional Regulator of Head Morphogenesis	502
4. The Otx2-Lhx1-WNT Cascade	505
5. The Head Gene Regulatory Network	507
6. Future Perspectives	515
Acknowledgments	516
References	516
30. Developmental Biology: We Are All Walking Mutants	523
Paul A. Trainor	
31. A Bespoke Coat for Eggs: Getting Ready for Fertilization	539
Paul M. Wassarman and Eveline S. Litscher	
1. Introduction	539
2. ZP and VE Proteins	540
3. Evolution of ZP Genes	541
4. ZP Domain	541
5. Synthesis and Polymerization of ZP Proteins	543
6. Structure of the ZP	545
7. ZP Proteins and Fertilization	545
8. Final Comments	547
Acknowledgments	548
References	549
32. Germ Line Mechanics—And Unfinished Business	553
Gary M. Wessel	
1. Introduction	553
2. In Context	554
3. Is Nuage, or Germinal Granules, Essential for Animals Using Acquired Factors for Germ Line Determination?	558
4. The Broad Utility of Germ Line Factors in Somatic Cells and Cancer	559
5. Consequences of Early Germ Line Determination	561
6. Diversity in Mechanisms of Germ Line Formation	563

7. Final Comments	563
Acknowledgments	564
References	564
33. Positional Information and Cell Fate Determination in the Early <i>Drosophila</i> Embryo	567
Eric Wieschaus	
1. Origin and Formation of the Bicoid Gradient	569
2. The Information Content of the Bicoid Gradient	571
3. A Direct Relationship Between Bcd Concentration and Final Pattern?	573
4. How Much Positional Information Is Relevant?	574
5. Conclusions	576
References	577
34. Segment Identity and Cell Segregation in the Vertebrate Hindbrain	581
Megan Addison and David G. Wilkinson	
1. Introduction	582
2. Vertebrate Hindbrain Segmentation	582
3. Segment Identity	584
4. Cell Segregation	589
5. Summary and Future Perspectives	591
Acknowledgments	592
References	592
35. Positional Information and Pattern Formation	597
Lewis Wolpert	
36. The Birth of Animal Development: Multicellularity and the Germline	609
Hugh R. Woodland	
1. Introduction	609
2. The Origins of Animals	611
3. Sex and the Origins of Multicellularity	613
4. What Is the Germline?	615
5. The Germline-Soma in Simple Animals	616
6. Why Did Animals Lose Their Ubiquitous Neoblast-Like Cells?	619
7. How Do Germlines Achieve Immortality?	620

8. Previous Explanations of Multicellularity	622
9. Protecting the Germline	624
10. Conclusions	624
Acknowledgments	626
References	626
 37. Pli Selon Pli: Mechanochemical Feedback and the Morphogenetic Role of Contractility at Cadherin Cell-Cell Junctions	631
Bipul R. Acharya and Alpha S. Yap	
1. Introduction	632
2. Cadherins and the Contractile Cytoskeleton	632
3. The Elements of the System	634
4. Mechanochemical Feedback Among the Elements of the Cadherin-Actomyosin System	638
5. Emergent Properties of Mechanochemical Networks	640
6. Concluding Comments	642
Acknowledgments	643
References	643
 38. From Endoderm to Liver Bud: Paradigms of Cell Type Specification and Tissue Morphogenesis	647
Kenneth S. Zaret	
1. Distinct Embryonic and Adult Functions for the Same Tissue	648
2. Pioneer Factors as a Basis for Developmental Competence	650
3. Independent Progenitor Cell Sources for One Cell Type	653
4. Combinatorial Inductive Signaling and Alternative Fate Control	655
5. Connecting Inductive Signaling to Competent States of Chromatin and Cell Fate Control	659
6. Onset of Morphogenesis	661
7. The Future of Programming from Embryonic Stem Cells and Other Cell Types	663
References	664
 39. The Acquisition of Cell Fate in Mouse Development: How Do Cells First Become Heterogeneous?	671
Sarah J.L. Graham and Magdalena Zernicka-Goetz	
1. Introduction	671
2. Formation of the TE and Inner Cell Mass	674
3. What Controls the First Cell Fate Decision?	676

4. Formation of the EPI and PE	679
5. What Controls the Second Cell Fate Decision?	680
6. Early Heterogeneities that Bias Cell Fate	682
7. How Does Heterogeneity First Arise?	687
Acknowledgments	689
References	689
