|---------------------------------------------------------------------------------------------|-----|
| PREFACE.....                                                                                | xi  |
| <b>CHAPTER 1</b> Of Cockroaches and Wolves: Framing Animal Behavior.....                    | 1   |
| 1.1 Introduction: Animal Behavior.....                                                      | 2   |
| 1.2 Wolves: Lessons in Social Behavior.....                                                 | 5   |
| 1.3 Cockroaches: Models for Animal Behavior.....                                            | 8   |
| 1.4 The Four Questions Revisited.....                                                       | 10  |
| 1.5 Evolution: A Review.....                                                                | 13  |
| 1.6 The Study of Animal Behavior: Where Did It Come From?.....                              | 19  |
| 1.7 <i>Umwelt</i> : The World in Which Animals Behave.....                                  | 24  |
| Summary.....                                                                                | 24  |
| Study Questions.....                                                                        | 25  |
| <b>CHAPTER 2</b> Neurobiology and Endocrinology for Animal Behaviorists.....                | 27  |
| 2.1 Neurobiology, Endocrinology, and Sensory Systems: An Overview.....                      | 28  |
| 2.2 What Does an Animal Behaviorist Need to Know About Neurobiology?.....                   | 29  |
| 2.3 What Does an Animal Behaviorist Need to Know About Endocrinology?.....                  | 40  |
| 2.4 What Does an Animal Behaviorist Need to Know About Sensory Systems?.....                | 54  |
| Summary.....                                                                                | 68  |
| Study Questions.....                                                                        | 69  |
| <b>CHAPTER 3</b> Behavioral Genetics.....                                                   | 71  |
| 3.1 Introduction: Principles of Behavioral Genetics.....                                    | 72  |
| 3.2 The Nature Versus Nurture Debate.....                                                   | 77  |
| 3.3 Domestication.....                                                                      | 80  |
| 3.4 Phylogeny.....                                                                          | 80  |
| 3.5 Classical and Mendelian Genetics.....                                                   | 84  |
| 3.6 Quantitative and Biometrical Genetics.....                                              | 89  |
| 3.7 Evolutionary and Population Genetics.....                                               | 100 |
| 3.8 Molecular Genetics.....                                                                 | 102 |
| Summary.....                                                                                | 104 |
| Study Questions.....                                                                        | 105 |
| <b>CHAPTER 4</b> Homeostasis and Time Budgets.....                                          | 109 |
| 4.1 Introduction.....                                                                       | 110 |
| 4.2 Drive Theory and Homeostasis.....                                                       | 113 |
| 4.3 Behavioral Syndromes, Personality, Emotion, and Mood.....                               | 121 |
| 4.4 Biological Clocks and Circadian Rhythms.....                                            | 127 |
| 4.5 Modern Concepts of Homeostatic Regulation.....                                          | 131 |
| 4.6 Time Budgets and Trade-Offs: Balancing Demands in How Animals<br>Budget Their Time..... | 137 |
| Summary.....                                                                                | 141 |
| Study Questions.....                                                                        | 142 |
| <b>CHAPTER 5</b> Learning.....                                                              | 145 |
| 5.1 Introduction.....                                                                       | 146 |
| 5.2 Learning and Memory.....                                                                | 148 |
| 5.3 Basic Models for Learning.....                                                          | 152 |

|                  |                                                                                         |            |
|------------------|-----------------------------------------------------------------------------------------|------------|
| 5.4              | Social Learning: Traditions and "Cultural" Transmission of Information in Animals ..... | 163        |
| 5.5              | Play, Learning, and Development .....                                                   | 166        |
|                  | Summary .....                                                                           | 169        |
|                  | Study Questions .....                                                                   | 170        |
| <b>CHAPTER 6</b> | <b>Cognition .....</b>                                                                  | <b>175</b> |
| 6.1              | Introduction: What Is Cognition .....                                                   | 176        |
| 6.2              | The Concept of Self .....                                                               | 186        |
| 6.3              | Thought, Foresight, and Problem Solving .....                                           | 191        |
| 6.4              | Intelligence and Social Cognition .....                                                 | 199        |
| 6.5              | The Frontal Lobe and Impulse Control .....                                              | 201        |
| 6.6              | Animal Emotions .....                                                                   | 202        |
| 6.7              | Are Cognitive Abilities Under- or Over-Attributed to Animals? .....                     | 204        |
|                  | Summary .....                                                                           | 205        |
|                  | Study Questions .....                                                                   | 206        |
| <b>CHAPTER 7</b> | <b>Communication .....</b>                                                              | <b>211</b> |
| 7.1              | Introduction: Communication Theory .....                                                | 212        |
| 7.2              | Evolution of Communication .....                                                        | 216        |
| 7.3              | Modes of Communication .....                                                            | 218        |
| 7.4              | Multimodal Signaling and Encoding Complex Messages .....                                | 238        |
| 7.5              | Runaway Sexual Selection and Signaling .....                                            | 240        |
| 7.6              | Deceit Versus Honest Signaling .....                                                    | 241        |
| 7.7              | Game Theory and Communication .....                                                     | 244        |
| 7.8              | Interspecific Signaling .....                                                           | 246        |
|                  | Summary .....                                                                           | 247        |
|                  | Study Questions .....                                                                   | 247        |
| <b>CHAPTER 8</b> | <b>Movement: Search, Navigation, Migration, and Dispersal .....</b>                     | <b>253</b> |
| 8.1              | Introduction .....                                                                      | 254        |
| 8.2              | Sources of Navigational Information .....                                               | 259        |
| 8.3              | Sensing the Environment in Time and Space .....                                         | 262        |
| 8.4              | How to Respond to Sensory Information: A Toolbox for Finding the Way .....              | 265        |
| 8.5              | Search .....                                                                            | 273        |
| 8.6              | Homing .....                                                                            | 274        |
| 8.7              | Migration .....                                                                         | 277        |
| 8.8              | Dispersal .....                                                                         | 285        |
|                  | Summary .....                                                                           | 288        |
|                  | Study Questions .....                                                                   | 289        |
| <b>CHAPTER 9</b> | <b>Foraging .....</b>                                                                   | <b>293</b> |
| 9.1              | Introduction .....                                                                      | 294        |
| 9.2              | Diet Choice and Food Selection .....                                                    | 295        |
| 9.3              | How Animals Get Food .....                                                              | 297        |
| 9.4              | Willing Food .....                                                                      | 306        |
| 9.5              | Manipulation of Prey .....                                                              | 307        |
| 9.6              | Parasitic Life Cycles .....                                                             | 308        |
| 9.7              | Foraging and Optimality Theory .....                                                    | 311        |
| 9.8              | Optimal Patch Choice .....                                                              | 313        |
| 9.9              | Optimal Prey Choice .....                                                               | 317        |
| 9.10             | Nutritional Constraints .....                                                           | 318        |
|                  | Summary .....                                                                           | 319        |
|                  | Study Questions .....                                                                   | 320        |

|                   |                                                                                |     |
|-------------------|--------------------------------------------------------------------------------|-----|
| <b>CHAPTER 10</b> | Self-Defense .....                                                             | 325 |
| 10.1              | Introduction .....                                                             | 326 |
| 10.2              | Cryptic Behavior: Camouflage.....                                              | 328 |
