Biography	xi
Preface	xiii
Acknowledgments	xix
1. DNA Molecules Mechanical Properties and Models	
1.1 Mechanical Properties	1
1.2 Discrete, Flexible Chains, and Atomistic Models: WLC, FJC, DPC, WLRC, HW, ZZM	5
1.3 Continuum and Approximation Models	15
1.4 Dynamics and Fluctuation	18
1.5 Persistence Length Features	23
1.6 A, B, Z DNA Forms, S- and P-DNA Phases	27
1.7 Polymer Materials	30
1.8 DNA Technical Applications	30
1.9 DNA Size and Mass Conversion	31
1.10 Deflection at Equilibrium	32
References	33
2. Force Application, Measurement, and Manipulation Accessories	
2.1 Stretching Micropipette, Glass Microneedles, and Hydrodynamics	39
2.2 Optical Trap and Tweezers	40
2.2.1 The Radiation Pressure of Light	41
2.2.2 Experimental Test	42
2.3 Small-Angle X-ray Scattering Interference (SAXSI)	42
2.4 Magnetic Tweezers	43
2.4.1 Magnetic Influence Field	45
2.4.2 Magnetostriction	45
2.5 Atomic Force Microscopy	45
2.5.1 Micro-Nano-Cantilevers	46
2.5.2 Cantilever Preferred Shape	49
2.5.3 Effective Mass Factor	51
2.5.4 The Largest Attainable Natural Frequencies	57
2.5.5 Spring Constants	60

2.5.6	AFM Dynamics Parameters	65
2.5.7	Contact Dynamics of Tapping Mode	67
2.5.8	Nanocontact Mechanics in Manipulation	68
2.6	Concave Notch Hinges	72
2.6.1	Inverse Conformal Mapping of Approximating Contour	76
2.6.2	Circular Notch Hinge	78
2.6.3	Elliptical Notch Hinge	80
2.6.4	Computerized Approximation of Concave Contours	82
2.6.5	Instantaneous Center of Rotation	86
2.6.6	Segmented Hinges	92
	References	96
3.	AFM with Higher Mode Oscillations and Higher Sensitivity	
3.1	Effects of the Resonance Modes.	
	Kinetostatic Method	101
3.1.1	Vibrating Beams	101
3.2	Effective Spring Constants Ratio	110
3.3	Cantilever End Inclination Spring Constants	112
3.4	Quality Factor Influence	114
3.4.1	AFM Tapping Mode Dynamics in Liquid	116
3.5	End Extended Mass (V-Shaped Cantilever)	116
3.5.1	Outline of the Theory. <i>Boundary Conditions</i>	117
3.5.2	Frequency Equation	118
3.5.3	Ratios of Spring Constants	119
3.5.4	Sensitivity to Additional Mass at Higher Modes	126
3.6	Shift of Resonant Frequency	128
3.7	Actuators and Detectors	129
3.7.1	Nanotubes (Hollow Cylinders)	130
3.7.2	Nonlocal and Asymmetric Elasticity	131
3.8	Internal and External Damping	134
3.8.1	Ambient Influence and Protection	135
3.8.2	Methods for the Design of Vibro-Isolation Means	142
3.9	Calibration	149
3.9.1	Quantum Effects	149
3.9.2	Information Criterion of Expended Uncertainty	
	Negligibility	151
	References	152
4.	Kinematics and Nonlinear Motion Transformation in Elastic Helicoids	
4.1	Helix Parameters	157
4.2	Motion Stability	162
4.3	Transmission Nonlinearity	164
4.4	Motion Transformation in a Thin Helicoidal Strip	170
4.4.1	Stress Parameters, Dangerous Points	176
4.4.2	Strip Parameters Deflection	177

4.5	Coiled Ribbon Helicoids	180
4.6	Transmission Relations	185
4.7	Fatigue Options and Statistical Fluctuations	195
	References	197

5. Dynamics of the Elastic Systems with Helicoids

5.1	Dynamic Functions	199
5.2	Helicoids Dynamics	200
5.2.1	Conditional Radius	202
5.3	Vibration of a Thin Helicoid	203
5.3.1	The General Relations	205
5.3.2	Helicoidal String	205
5.3.3	Function of Impedance	207
5.3.4	The Elastic Longitudinal Links	213
5.3.5	Nonlinear Elasticity and Inertia	214
5.4	Internal Friction (Damping) in a Helicoid	215
5.4.1	Microplastic Shifts	219
5.5	Shells and Quasi-Helicoids	221
5.5.1	The Coiled Ribbon Helicoids	221
5.5.2	Combined Spring Calibration	223
5.5.3	The Pretwisted Helicoidal Tube	224
5.6	Dynamic Rate in Helicoidal Sensors	224
5.6.1	Photoelectric Sensors	224
5.6.2	Versions of String Helicoidal Multivibrators	227
5.7	Flexural Wave Propagation	228
5.8	Limits of the Transmission Entropic Fluctuations	228
	References	230

6. Double-Stranded DNA Elasticity

6.1	Helix Chain	233
6.2	Properties of Explicit Helicoidal Model (EHM)	233
6.3	Twist-Stretch Coupling	236
6.4	Statistical Fluctuation	237
6.5	Stretch Stiffness and Poisson's Ratio	238
6.6	Persistence Length Relations and Poisson's Ratio	239
6.7	Overwinding Options	241
6.7.1	"Toy" Model	241
6.7.2	Explicit Helicoidal Model (EHM)	243
6.7.3	P-DNA Phase	246
6.8	Nonlinear Length Fluctuations	246
6.8.1	Remeasuring the Double Helix	246
6.8.2	Negation of Nonlinear Fluctuation	248
6.8.3	EHM Estimate	249
6.9	Speed Factor	255
	References	258

7. DNA Elasticity with Transition

7.1	Discrete Persistence Chain (DPC)	261
7.2	Reverse WLC Modeling	262
7.3	Approximation by Sequence of Linear Springs	263
7.4	Explicit Helicoidal Model (EHM) Transition	266
7.4.1	Force-Stretch Formula	267
7.4.2	Calculation Results	268
7.5	Buckling of DNA Molecule	270
7.6	Elasticity of ssDNA, ZZM, DPC, and EHMR Models	271
7.6.1	Zigzag (ZZM) and DPC Models	272
7.6.2	Application of Coiled Ribbon	272
7.7	Mechanical Stability	276
7.7.1	Experimental Data	276
7.7.2	EHM with Stretch and Relaxation Difference	276
7.8	Nonlinear Dynamics and Traveling Waves	279
7.9	EHM in Chains	280
	References	285
