

CONTENTS

<i>Contributors</i>	ix
<i>Preface</i>	xiii
<i>Acknowledgments</i>	xv
1. PUPIL: A Software Integration System for Multi-Scale QM/MM-MD Simulations and Its Application to Biomolecular Systems	1
Juan Torras, Benjamin P. Roberts, Gustavo M. Seabra, and Samuel B. Trickey	
1. Introduction	2
2. QM/MM-MD Methodology	7
3. The PUPIL Framework	10
4. Biomolecular Applications	19
5. Recent Developments	23
6. Conclusions	27
Acknowledgments	27
References	28
2. Efficient Calculation of Enzyme Reaction Free Energy Profiles Using a Hybrid Differential Relaxation Algorithm: Application to Mycobacterial Zinc Hydrolases	33
Juan Manuel Romero, Máriano Martín, Claudia Lilián Ramírez, Victoria Gisel Dumas, and Marcelo Adrián Martí	
1. Introduction	34
2. Computational Methods	39
3. Results	45
4. Discussion	58
5. Conclusions	62
Acknowledgments	62
References	62
3. A Practical Quantum Mechanics Molecular Mechanics Method for the Dynamical Study of Reactions in Biomolecules	67
Jesús I. Mendieta-Moreno, Iñigo Marcos-Alcalde, Daniel G. Trabada, Paulino Gómez-Puertas, José Ortega, and Jesús Mendieta	
1. Introduction	68
2. Description of the Method	69

3. Dynamical Analysis of Reactions in Biomolecules	75
4. Catalytic Mechanism of TIM	78
5. Conclusions	85
Acknowledgments	86
References	86
4. Explicit Drug Re-positioning: Predicting Novel Drug-Target Interactions of the Shelved Molecules with QM/MM Based Approaches	89
Ankur Omer, Venkatesan Suryanarayanan, Chandrabose Selvaraj, Sanjeev Kumar Singh, and Poonam Singh	
1. Introduction	90
2. The Principle	93
3. Subtractive QM/MM Coupling	94
4. Additive QM/MM Coupling	95
5. Ligand Polarization	96
6. Protein Polarization	97
7. QM/MM Molecular Dynamics	99
8. Geometry Optimization	99
9. Applications of QM/MM Methods to Structure-Based Drug Design	100
10. Five Years View Point: Future of QM/MM-Based Repositioning	104
11. Conclusion	106
Acknowledgments	106
References	107
5. Enzymatic Halogenases and Haloperoxidases: Computational Studies on Mechanism and Function	113
Amy Timmins and Sam P. de Visser	
1. Introduction	114
2. Classification of Halogenases	115
3. General Mechanism of α -Ketoglutarate-Dependent Halogenases	125
Acknowledgments	144
References	144

6. The Importance of the MM Environment and the Selection of the QM Method in QM/MM Calculations: Applications to Enzymatic Reactions	153
Eric André C. Bushnell, Victoria Erica J. Berryman, James W. Gauld, and Russell J. Boyd	
1. Introduction	154
2. Case Studies	159
3. Conclusions	176
4. Future Directions	177
Acknowledgments	178
References	178
7. QM and QM/MM Methods Compared: Case Studies on Reaction Mechanisms of Metalloenzymes	187
Tomasz Borowski, Matthew Quesne, and Maciej Szaleniec	
1. Introduction	188
2. Advantages of QM/MM	190
3. Disadvantages of QM/MM	192
4. Steric Constrains in QM Versus QM/MM Approach	194
5. Influence of the Embedding Scheme on the Reaction Chemistry: Case of EbDH	195
6. The Size of QM-Part and the Over Polarization Effect	201
7. How Can a Specific Enzymes Environment Alter the Intrinsic Nature of a Reaction?	202
8. Novel Modifications in Enzyme Structures May Produce Reactivity Patterns Only Observed Using QM/MM	209
9. Ring Hydroxylation and Rearrangement by 4-Hydroxyphenylpyruvate Dioxygenase	214
10. Conclusions	217
Acknowledgments	218
References	218
8. QM/MM Studies Reveal How Substrate-Substrate and Enzyme-Substrate Interactions Modulate Retaining Glycosyltransferases Catalysis and Mechanism	225
Hansel Gómez, Fernanda Mendoza, José M. Lluch, and Laura Masgrau	
1. Introduction	226
2. Methodological Overview	228

3. Retaining GTs Mechanism	234
4. Conclusions	248
Acknowledgments	249
References	250
9. Excited States and Photochemistry of Chromophores in the Photoactive Proteins Explored by the Combined Quantum Mechanical and Molecular Mechanical Calculations	255
Lihong Liu, Ganglong Cui, and Wei-Hai Fang	
1. Introduction	256
2. Method	259
3. Implementation of the QM/MM Approach in Protein	261
4. Conclusion and Perspective	276
References	278
