Contributors	ix
Foreword	xi
Introduction to <i>Advances in Insect Physiology: Genomics, Physiology and Behaviour of Social Insects</i>	xiii
1. Old Threads Make New Tapestry—Rewiring of Signalling Pathways Underlies Caste Phenotypic Plasticity in the Honey Bee, <i>Apis mellifera</i> L.	1
Klaus Hartfelder, Karina R. Guidugli-Lazzarini, Mario S. Cervoni, Douglas E. Santos, and Fernanda C. Humann	
1. Introduction	2
2. Differential Feeding of Honey Bee Larvae	3
3. The Secrets of Royal Jelly	5
4. The Role of JH in Honey Bee Caste Development	7
5. IIS, TOR and Egfr Pathway Activities in Honey Bee Caste Development	13
6. Endogenous Hypoxia in Worker Larvae—Convergence of Nutrient Signalling and Oxidative Metabolism	20
7. Epigenetics and Caste Development	22
8. Are There Commonalities Between Context-Dependent Signalling Pathways in Larval Caste Development and Adult Caste Function?	24
9. Conclusions	26
Acknowledgements	29
References	29
2. The Physiological and Genomic Bases of Bumble Bee Social Behaviour	37
Etya Amsalem, Christina M. Grozinger, Mario Padilla, and Abraham Hefetz	
1. Introduction	38
2. Kin Conflict over Sex Ratios in Bumble Bees	44
3. Behavioural, Physiological, and Genetic Traits Associated with the Solitary Phase	45
4. Behavioural, Physiological, and Genetic Traits Associated With the Eusocial Phase	51
5. Worker–Worker Conflict over Reproduction	58
6. Larval Development and Mechanisms Underlying Caste Determination	72
7. Conclusions and Future Directions	81
References	83

3. Physiological and Genomic Mechanisms of Social Organization in Wasps (Family: Vespidae)	95
Jennifer M. Jandt and Amy L. Toth	
1. Introduction	96
2. Larval Development and Adult Reproductive State	101
3. Adult Reproductive State and Caste	105
4. Adult Worker Division of Labour	110
5. Towards a Synthesis: Understanding Wasp Social Evolution from a Mechanistic Perspective	113
6. Gaps in our Understanding and Future Directions	120
7. Conclusions	123
Acknowledgements	124
References	124
4. Juvenile Hormone: A Central Regulator of Termite Caste Polyphenism	131
Judith Korb	
1. Introduction	132
2. JH: A Major Regulator of Termites' Post-Embryonic Larval Development	137
3. JH and Caste Differentiation into the Two Synapomorphic Termite Castes: The Soldiers and Neotenic Reproductives	139
4. JH, Fecundity and Reproductive Division of Labour	147
5. Conclusions	151
Acknowledgements	152
References	152
5. The Physiology and Genomics of Social Transitions in Aphids	163
Patrick Abbot	
1. Introduction	164
2. Background on Social Aphids	165
3. An Aphid Genome	169
4. Two Axes of Social Transitions in Aphids	171
5. Conclusions	183
Acknowledgements	183
References	183
6. Insect Reward Systems: Comparing Flies and Bees	189
Eirik Søvik, Clint J. Perry, and Andrew B. Barron	
1. Introduction	190
2. What Do We Mean by Reward?	191

3. Reward Systems in Honey Bees and Flies	194
4. Reward Systems and Social Evolution	213
5. Concluding Remarks	217
Acknowledgements	218
References	218
7. Epigenetics in Social Insects	227
Karl M. Glastad, Linh M. Chau, and Michael A.D. Goodisman	
1. Social Insects and Developmental Plasticity	228
2. Epigenetic Inheritance	229
3. DNA Methylation	231
4. Histone Modifications and Variants	241
5. Noncoding RNAs	247
6. Future Directions	254
References	254
8. The Molecular and Evolutionary Genetic Implications of Being Truly Social for the Social Insects	271
Timothy A. Linksvayer	
1. Introduction to IGEs	276
2. Survey of Studies of IGEs in Social Insects	277
3. IGEs are Expected to be Ubiquitous in Social Insects	279
4. Implications for the Molecular Genetic Underpinnings of Social Insect Trait Expression	280
5. Why Should Social Insect Researchers Consider the IGE Framework?	282
6. Conclusions	285
References	285
9. Population Genomic and Phylogenomic Insights into the Evolution of Physiology and Behaviour in Social Insects	293
Clement F. Kent and Amro Zayed	
1. Introduction	294
2. A Primer on Tests of Selection Using Sequence Data	296
3. A Summary of Molecular Population Genetics, Phylogenomics and Population Genomic Studies of Social Insects	304
4. The Future and the Next-Gen Synthesis	314
Acknowledgements	317
References	318

10. Understanding Honey Bee Worker Self-Sacrifice: A Conceptual-Empirical Framework	325
Emma K. Mullen and Graham J. Thompson	
1. Introduction	326
2. Honey Bees as a Model Insect Society	327
3. Gap Between Gene Theory and Genes	329
4. Towards a Molecular Understanding of Worker Self-Sacrifice	329
5. Prediction 1: Genes for Altruism Should Satisfy Hamilton's Rule	330
6. Prediction 2: Genes for Altruism Should Be Environmentally Sensitive	332
7. Prediction 3: Genes for Altruism Should Increase in Number and Complexity With Social-Behavioral Sophistication	339
8. Prediction 4: Genes for Altruism Should Co-evolve With, or Depend on, the Previous Evolution of Genes for Kin Recognition	340
9. Prediction 5: Genes for Altruism Reside in Regions of Low Recombination, Exhibit Co-expression and Show Modular Genetic Architecture	342
10. Prediction 6: Genes for Altruism Should Have At least Partially Additive Effects	344
11. Prediction 7: Genes for Altruism Should Show Strong Pleiotropy	345
12. Summary	346
