Preface

xix

Section I

Membrane Protein Engineering, Solubilization and Purification

1. Multicolor Fluorescence-Based Screening Toward Structural Analysis of Multiprotein Membrane Complexes 3

Simon Trowitzsch and Robert Tampé

1. Introduction 4
2. Production of Fluorescently Labeled TAP Complexes in *P. pastoris* 12
3. Production of Fluorescently Labeled TAP Complexes in Mammalian Cells 16
4. Multicolor Fluorescence-Based Screening Approaches 17
5. Summary 21
- Acknowledgments 21
- References 21

2. A Novel Screening Approach for Optimal and Functional Fusion of T4 Lysozyme in GPCRs 27

Elizabeth Mathew and Mark E. Dumont

1. Introduction 28
2. Overall Strategy 30
3. Plasmids, Yeast Strains, and Media 32
4. Library Construction 33
5. Expression Screening and Functional Assays 37
6. Results for the Yeast α -Factor Receptor Ste2p 39
- Acknowledgments 40
- References 40

3. Membrane Preparation and Solubilization 45

Ankita Roy

1. Introduction 46
2. Membrane Preparation 47
3. Solubilization 50
- References 55

4. Amphipathic Agents for Membrane Protein Study	57
Aiman Sadaf, Kyung Ho Cho, Bernadette Byrne, and Pil Seok Chae	
1. Introduction	58
2. MP Stability in Membrane Architecture	58
3. Conventional Detergents	60
4. Novel Amphipathic Systems	65
5. Summary of Detergent Properties	85
6. Detergent Selection	86
7. Future Direction	87
References	88
5. Quantification of Detergent Using Colorimetric Methods in Membrane Protein Crystallography	95
Chelsy Prince and Zongchao Jia	
1. Detergent in Membrane Protein Crystallography	96
2. 2,6-Dimethylphenol Assay for Sugar-Based Detergents	97
3. Molybdate Assay for Total Phosphate	103
4. Assay of Bile Salt with Sulfuric Acid	106
5. Applications of Detergent Measurement	108
6. Concluding Remarks	113
Acknowledgments	114
References	114
6. Solubilization of G Protein-Coupled Receptors: A Convenient Strategy to Explore Lipid-Receptor Interaction	117
Amitabha Chattopadhyay, Bhagyashree D. Rao, and Md. Jafurulla	
1. G Protein-Coupled Receptors	118
2. Membrane Lipids in GPCR Organization and Function	118
3. Cholesterol: An Important Modulator of GPCR Function	119
4. Membrane Protein Solubilization: An Essential Step Toward Purification	120
5. Solubilization as a Strategy to Monitor Lipid-Protein Interactions	125
6. Conclusions and Future Perspectives	129
Acknowledgments	130
References	130
7. Overexpression, Isolation, Purification, and Crystallization of NhaA	135
Etana Padan and Manish Dwivedi	
1. Introduction	136
2. Overexpression	138

3. Isolation of Membranes from Strain Expressing His-tagged NhaA	140
4. Affinity Purification of His-tagged NhaA	141
5. Analysis of Protein Quality	142
6. Crystallization of His-tagged NhaA	143
7. Functional Assay	143
8. Preparation of Solutions	145
Acknowledgments	146
References	146

8. Purification, Refolding, and Crystallization of the Outer Membrane Protein OmpG from *Escherichia coli* **149**

Stefan Köster, Katharina van Pee, and Özkan Yildiz

1. Introduction	150
2. OmpG Production and Purification	152
3. Protein Analysis	155
4. Crystallization of OmpG	158
5. Summary	164
References	164

9. Biophysical Approaches to the Study of LeuT, a Prokaryotic Homolog of Neurotransmitter Sodium Symporters **167**

Satinder K. Singh and Aritra Pal

1. Introduction	168
2. LeuT Expression, Purification, Crystallization, and Structure Determination	169
3. Functional Characterization	183
4. Transport Mechanism Unveiled from Structure, Function, and Computational Biology	192
5. Summary	194
Acknowledgments	194
References	195

Section II

Generation and Use of Antibody Fragments Against Membrane Proteins

10. Generation of Recombinant Antibody Fragments for Membrane Protein Crystallization **201**

Syed H. Mir, Claudia Escher, Wei-Chun Kao, Dominic Birth, Christophe Wirth, and Carola Hunte

1. Introduction	202
-----------------	-----

2. Generation of Antibodies for Structural Characterization of Membrane Proteins	206
Acknowledgments	215
References	215
11. Phage Display Selections for Affinity Reagents to Membrane Proteins in Nanodiscs	219
Pawel K. Dominik and Anthony A. Kossiakoff	
1. Introduction	220
2. Materials and Equipment	222
3. Methods	224
4. Notes	241
Acknowledgments	244
References	244
12. Antibody Fragments for Stabilization and Crystallization of G Protein-Coupled Receptors and Their Signaling Complexes	247
Arun K. Shukla, Charu Gupta, Ashish Srivastava, and Deepika Jaiman	
1. Introduction	248
2. The Genesis of Antibody Fragment-Mediated Membrane Protein Crystallization	249
3. Nanobody Technology—Trapping Active GPCR Conformations	252
4. Antibody Fragments in Visualizing GPCR Signaling Complexes	254
5. Conclusion and Future Perspective	256
Acknowledgments	257
References	257
Section III	
Biophysical Studies of Membrane Proteins	
13. Conformational Analysis of G Protein-Coupled Receptor Signaling by Hydrogen/Deuterium Exchange Mass Spectrometry	261
Sheng Li, Su Youn Lee, and Ka Young Chung	
1. Introduction	262
2. Experimental Procedure	266
3. Conclusion and Perspectives	275
Acknowledgments	276
References	276

14. EPR Studies of Gating Mechanisms in Ion Channels	279
Sudha Chakrapani	
1. SDSL and EPR Spectroscopy to Study Gating Mechanisms in Ion Channels	281
2. Voltage-Gated Ion Channels	284
3. Ligand-Gated Ion Channels	291
4. Future Directions	299
Acknowledgments	300
References	300
15. Magic-Angle-Spinning Solid-State NMR of Membrane Proteins	307
Lindsay A. Baker, Gert E. Folkers, Tessa Sinnige, Klaartje Houben, Mohammed Kaplan, Elwin A.W. van der Crujisen, and Marc Baldus	
1. Introduction	308
2. Production of Recombinant Proteins in <i>Escherichia coli</i>	310
3. Isolation of Cells and Cellular Membranes	316
4. Purification and Reconstitution of MPs for ssNMR	318
5. Dedicated ssNMR Experiments	322
6. Conclusions	325
Acknowledgments	325
References	325
16. Solution NMR Structure Determination of Polytopic α-Helical Membrane Proteins: A Guide to Spin Label Paramagnetic Relaxation Enhancement Restraints	329
Linda Columbus and Brett Kroncke	
1. Site-Directed Spin Labeling	332
2. PRE Measurements	336
3. Structure Calculation with PRE Restraints	338
4. Assessment of Structure Quality	341
5. Future Developments	342
6. Summary	343
References	343
Section IV	
Crystallization of Membrane Proteins	
17. Inducing Two-Dimensional Crystallization of Membrane Proteins by Dialysis for Electron Crystallography	351
Yusuf M. Uddin and Ingeborg Schmidt-Krey	
1. Introduction	351

2. 2D Crystallization by Dialysis	353
3. EM Screening of 2D Crystallization Conditions	356
4. Optimization of 2D Crystallization and Protein Purification	358
5. Conclusion	360
References	360
18. Crystallization of Membrane Proteins by Vapor Diffusion	363
Jared A. Delmar, Jani Reddy Bolla, Chih-Chia Su, and Edward W. Yu	
1. Introduction	364
2. Membrane Protein Expression	365
3. Membrane Protein Purification	368
4. Membrane Protein Crystallization via Vapor Diffusion	372
5. Case Studies	377
6. Concluding Remarks	388
Acknowledgment	388
References	388
19. Bicelles Coming of Age: An Empirical Approach to Bicelle Crystallization	393
Sandra Poulos, Jacob L.W. Morgan, Jochen Zimmer, and Salem Faham	
1. Introduction	394
2. Protein Function and Folding in Lipid Bicelles	396
3. Bicelle Crystallization of MPs	398
4. User Guide to Bicelle Crystallization	398
5. Bicelle Crystallization General Protocol	401
6. Successful Crystallization Conditions	403
7. Case Study of Cellulose Synthase Crystallization	409
8. Alternative Approaches	411
9. Summary	411
Acknowledgments	412
References	412
20. Fluorescence Recovery After Photobleaching in Lipidic Cubic Phase (LCP-FRAP): A Precrystallization Assay for Membrane Proteins	417
Gustavo Fenalti, Enrique E. Abola, Chong Wang, Beili Wu, and Vadim Cherezov	
1. Introduction	418
2. Experimental Components and Considerations for LCP-FRAP Assays	419

3. Examples of Using LCP-FRAP to Guide GPCR Crystallization	428
4. Protocols for LCP-FRAP Assays	430
Acknowledgments	435
References	435

21. Crystallization of Proteins from Crude Bovine Rod Outer Segments **439**

Bo Y. Baker, Sahil Gulati, Wuxian Shi, Benlian Wang, Phoebe L. Stewart,
and Krzysztof Palczewski

1. Introduction	440
2. Experimental Procedures	442
3. Pilot Experimental Results	446
4. Conclusions	454
Acknowledgments	455
References	456

22. Crystallization of Photosystem II for Time-Resolved Structural Studies Using an X-ray Free Electron Laser **459**

Jesse Coe, Christopher Kupitz, Shibom Basu, Chelsie E. Conrad,
Shatabdi Roy-Chowdhury, Raimund Fromme, and Petra Fromme

1. Introduction	460
2. Isolation of Photosystem II	462
3. Crystallization for Studies with FELs	463
4. Detection and Characterization of Nano- and Microcrystals	466
5. Time-Resolved Crystallography of PSII Using FELs	468
6. Summary	478
Acknowledgments	479
References	479

Section V

Computational Approaches to Understand Membrane Proteins

23. Major Intrinsic Protein Superfamily: Channels with Unique Structural Features and Diverse Selectivity Filters **485**

Ravi Kumar Verma, Anjali Bansal Gupta, and Ramasubbu
Sankararamakrishnan

1. Introduction	486
2. Structural Biology of MIP Channels	489

3. MIPModDB Database: A Database of MIP Models	496
4. Unique Structural Features Within the TM Region	498
5. Residues Forming Ar/R SF are Diverse	504
6. Conclusion	512
Acknowledgments	512
References	512
24. Comparative Sequence-Function Analysis of the Major Facilitator Superfamily: The "Mix-and-Match" Method	521
M. Gregor Madej	
1. Introduction	522
2. Helix-Triplets	526
3. Detection of Functionally Homologous Positions	528
4. Examples	533
5. Conclusion	543
Acknowledgments	544
References	544
25. Elucidating Ligand-Modulated Conformational Landscape of GPCRs Using Cloud-Computing Approaches	551
Diwaker Shukla, Morgan Lawrenz, and Vijay S. Pande	
1. Introduction	552
2. What are Markov State Models?	554
3. How Do MSMs Enable Novel Insight?	560
4. How Can MSMs Be Used for Improved Drug Design?	564
5. Conclusions	569
Acknowledgments	570
References	570
Author Index	573
Subject Index	611
