Preface	xvii

Part I Development of Secondary Xylem

1. The Vascular Cambium of Trees and its Involvement in Defining Xylem Anatomy

*Uwe Schmitt, Gerald Koch, Dieter Eckstein, Jeong-Wook Seo,
Peter Prislan, Jožica Gričar, Katarina Čufar, Horst Stobbe,
Risto Jalkanen*

Introduction and Outline	3
Seasonal Variation of Cambial Activity	4
Mechanical Injury of the Cambium and its Restoration	8
Microscopic Xylem Features Defined by the Cambium	13
Macroscopically Visible Storied Structures	14
Microscopically Visible Storied Structures	15
Width and Size of Rays	18
Special Cell Types	19
Conclusions	22
References	22

2. Xylogenesis in Trees: From Cambial Cell Division to Cell Death

*Ryo Funada, Yusuke Yamagishi, Shahanara Begum, Kayo Kudo,
Eri Nabeshima, Widyanto Dwi Nugroho, Md. Rahman Hasnat,
Yuichiro Oribe, Satoshi Nakaba*

Introduction	25
Changes from Cambial Dormancy to Activity	26
Formation of Cell Wall	29
Formation of Modified Structure	35
Cell Death	36
Future Prospectives	38
References	39

3. Xylogenesis and Moisture Stress

Eryuan Liang, Lorena Balducci, Ping Ren, Sergio Rossi

Introduction (Plants and Water)	45
The Xylogenetic Process	47
Timings of Xylogenesis and Water Deficit	47
Xylem Growth and Moisture Stress	50
Quantification of Moisture Availability	52
Further Research	53
Conclusions	54
References	54

4. Abiotic Stresses on Secondary Xylem Formation

Jörg Fromm, Silke Lautner

Introduction	59
Effects of Nutrient Deficiency on Wood Formation	60
Influence of Drought Stress	64
Salinity-Induced Changes of Wood Formation	65
High and Low Temperature	66
Effects of Rising Ozone Levels on Diameter Growth of Trees	67
Conclusions	68
References	68

5. Flexure Wood: Mechanical Stress Induced Secondary Xylem Formation

Frank W. Telewski

Introduction	73
Reaction Wood	74
Wulstholz or "Beadwood"	76
Flexure Wood	76
Radial Growth	77
Structure	81
Chemical Composition	82
Biomechanics	83
Early Genetic Evaluation for Wood Quality and Wind Firmness	84
Forest Products Containing Flexure Wood	84
Conclusions	85
References	86

6. Reaction Wood

Lloyd A. Donaldson, Adya P. Singh

Introduction	93
Compression Wood	94
Formation	94

Structure	95
Genetics	98
Mechanism of Stress Generation	98
Wood Properties	99
Tension Wood	100
Formation	100
Structure	101
Genetics	103
Mechanism	104
Properties	105
References	106

Part II

Function and Pathogen Resistance of Secondary Xylem

7. Bordered Pit Structure and Cavitation Resistance in Woody Plants

Yuzou Sano

Introduction	113
Structure of Bordered Pit Membranes	115
Bordered Pit Membranes in Conifers	115
Bordered Pit Membranes in Angiosperms	118
Cavitation Resistance	124
Air Seeding	124
Pit Structure and Cavitation Resistance in Conifers	126
Pit Structure and Cavitation Resistance in Angiosperms	127
Conclusions	127
References	128

8. Fungal Degradation of Wood Cell Walls

Geoffrey Daniel

General Background	131
Wood Structure and Importance of Wood Chemistry on Decay	132
Fungal Colonization of Wood	134
Blue Stain (Sapstain) and Mold Fungi on Wood	139
True Wood-Degrading Fungi	141
Wood Cell Wall Degradation by White Rot Fungi	141
Wood Cell Wall Degradation by Brown Rot Fungi	146
Wood Cell Wall Degradation by Soft Rot Fungi	149
Fungal Enzymatic Systems Involved in Wood Decay	152
White Rot Fungi: Enzymes Involved and Some Biochemical Aspects of Decay	153
Brown Rot Fungi: Enzymes Involved and Some Biochemical Aspects of Decay	155

Soft Rot Fungi: Enzymes Involved and Some Biochemical Aspects of Decay	158
References	160

9. Bacterial Degradation of Wood

Adya P. Singh, Yoon Soo Kim, Tripti Singh

Introduction	169
Wood-Degrading Bacteria and Degradation Patterns	171
Slime	171
Colonization	172
Cell Wall Degradation	172
Tunneling Bacteria and Tunneling Type Degradation	172
TB Movement and Tunneling of Cell Wall	173
Enzymes, Vesicles, Radicals	176
Occurrence in Nature and Wood Substrates	177
Tunneling is a Unique Adaptation	177
Environmental and Ecological Significance	178
Erosion Bacteria and Erosion Type Degradation	178
Comparison of EB and TB	178
Cell Wall Degradation and Erosion Channel Formation	179
Enzymes, Vesicles, Radicals	183
Occurrence in Nature and Wood Substrates	183
Environmental and Ecological Significance	184
Chemical Characterization	184
Conclusions	185
Potential Biotechnological Applications of Wood-Degrading Bacteria	186
Cellulolytic Bacteria	186
Pit Membrane Degrading Bacteria	186
Rumen Bacteria	187
References	187

Part III

Economic Application of Secondary Xylem

10. Genetic Engineering for Secondary Xylem Modification: Unraveling the Genetic Regulation of Wood Formation

Jae-Heung Ko, Won-Chan Kim, Daniel E. Keathley, Kyung-Hwan Han

Introduction	193
Secondary Growth and Wood Formation	194
Reaction Wood	196
Seasonal Regulation of Cambial Growth	198

Genetic Control of Secondary Xylem (i.e., Wood) Formation	199
Secondary Wall Biosynthesis During Wood Formation	201
Genetic Regulation of Secondary Wall Biosynthesis	202
Genetic Modification of Wood Property	203
References	204
11. Secondary Xylem for Bioconversion	
<i>Shiro Saka, Hyeun-Jong Bae</i>	
Introduction	213
Bioconversion of Woody Biomass by Chemical Procedures	214
Acid Hydrolysis	214
Alkali Hydrolysis	215
Ionic Liquid	216
Hydrothermal Treatment	216
Bioconversion of Woody Biomass	221
Introduction	221
Cellulosic Conversion	221
Hemicellulosic Conversion	225
Concluding Remarks	228
References	228
12. Wood as Cultural Heritage Material and its Deterioration by Biotic and Abiotic Agents	
<i>Yoon Soo Kim, Adya P. Singh</i>	
Wooden Cultural Heritages and Their Property Diagnosis	233
Wooden Cultural Heritages	233
Property Diagnosis of WCH	235
Application of Wood Science in WCH Studies	236
Physical and Chemical Characteristics of WCH	238
Physical Characteristics of WCH	238
Chemical Characteristics of WCH	239
Abiotic Agents in the Deterioration of Moveable and Immoveable WCH	243
Discoloration	244
Cracks	244
Erosion of Wood Mass	245
Biotic Agents in the Deterioration of Moveable and Immoveable WCH	246
Deterioration of Moveable and Immoveable WCH by Insects	246
Deterioration of Moveable and Immoveable WCH by Microorganisms	248
Deterioration of Underwater WCH by Biotic Agents	249
Some Remarks on the Conservation of WCH	252
References	253

13. Biomaterial Wood: Wood-Based and Bioinspired Materials

*Ingo Burgert, Tobias Keplinger, Etienne Cabane,
Vivian Merk, Markus Rüggeberg*

Introduction	259
Wood Cell Wall Assembly Characterization	262
Scanning Probe Microscopy Techniques	263
Raman Spectroscopy of Wood Cell Walls	264
Recent Advances in Wood Cell and Cell Wall Modification	266
Chemical Modification Toward Wood Materials with Extended Lifetime	267
Modification Toward Functional Wood-Based Materials	269
Wood Functionalization Toward Actuation	271
Magnetic Hybrid-Wood Materials	271
Bioinspired Hydro-Actuated Wood	273
Conclusions and Outlook	275
References	276

14. Biological, Anatomical, and Chemical Characteristics of Bamboo

Benhua Fei, Zhimin Gao, Jin Wang, Zhijia Liu

Biological Characteristics of Bamboo	284
Vegetative Growth	284
Reproductive Growth	285
Molecular Biology	286
Anatomical Characteristics of Bamboo Culm	287
Macrostructure	287
Microstructure	289
Ultrastructure	293
Chemical Characteristics of Bamboo	296
Chemical Composition	296
Surface Chemical Characteristics of Bamboo	299
Utilization of Bamboo Extractives	300
The Key Scientific Research in the Future	303
References	303

Part IV

Advanced Techniques for Studying Secondary Xylem

15. Microscope Techniques for Understanding Wood Cell Structure and Biodegradation

Geoffrey Daniel

General Background: Microscope Analysis of Wood Structure and Biodegradation	310
Sample Preparation for Microscopy	311

Importance of Sample Selection and Preparation – General Aspects	311
Optical Microscopy: General Background and Applications	312
Scanning Electron Microscopy of Wood	318
Preparation Approaches for SEM and Ancillary Techniques	319
Conventional SEM and Field-Emission SEM	321
E-SEM, FE-E-SEM, FE-SEM, and Cryo-FE-SEM	325
Cryo-SEM and Cryo-FE-SEM	326
Transmission Electron Microscopy (Conventional TEM)	327
TEM Sample Preparation (Chemical Fixation, Dehydration, Resin Embedding, etc.)	329
TEM-Immunocytochemical/Immunogold Techniques for Labeling Extracellular Proteins and Wood Components	331
TEM-Viewing of Cellulose Microfibrils and Macrofibrils	332
Some Recent Developments in TEM Analysis of Wood Cell Structure: TEM-Tomography	333
Rapid Freezing Approaches	334
Development of Rapid Freezing Techniques for Wood Samples	334
Application of Analytical Techniques (SEM-EDX, TEM-EDX) for Understanding Wood Structure and Wood Degradation	335
Additional Techniques for Studying Wood Cell Wall Structure and Biodegradation	337
Confocal Microscopy	337
Spectroscopy: Fourier Transform Infrared Spectroscopy, X-Ray Photoelectron Spectroscopy and Time of Flight Secondary Ion Mass Spectrometry	338
References	339

16. **Rapid Freezing and Immunocytochemistry Provide New Information on Cell Wall Formation in Woody Plants**

Keiji Takabe, Jong Sik Kim

Introduction	345
Rapid Freezing Provides New Information on Cell Wall Formation in Woody Plants	346
Localization of Enzymes Involved in Cell Wall Formation Revealed by Immunocytochemistry	351
Immunocytochemistry Reveals the Deposition Process of Hemicelluloses in Normal Wood Cell Walls	353
Deposition of Hemicelluloses in Pit Membrane	355
Deposition of Polysaccharides in Compression Wood Cell Walls Revealed by Immunocytochemistry	358
Conclusions	358
References	359

17. Distribution of Cell Wall Components by TOF-SIMS

Dan Aoki, Kaori Saito, Yasuyuki Matsushita, Kazuhiko Fukushima

Current Situation of Microscopic Analyses	363
General Aspects of TOF-SIMS	364
Plant Analyses by TOF-SIMS	365
Polysaccharides	365
Lignin: Fragmentation Behavior	367
Lignin: Microscopic and Semiquantitative Evaluation	370
Inorganics	372
Extractives	372
Cryo-TOF-SIMS to Approach the Living-State Visualization	374
Conclusions and Prospects	376
References	376

Index	381
