Biography	xiii
CHAPTER 1 Scientific Notation and Metric Prefixes	1
Introduction	1
1.1 Significant Digits	1
1.1.1 Rounding Off Significant Digits in Calculations	2
1.2 Exponents and Scientific Notation	3
1.2.1 Expressing Numbers in Scientific Notation	4
1.2.2 Converting Numbers From Scientific Notation to Decimal Notation	6
1.2.3 Adding and Subtracting Numbers Written in Scientific Notation	7
1.2.4 Multiplying and Dividing Numbers Written in Scientific Notation	8
1.3 Metric Prefixes	10
1.3.1 Conversion Factors and Canceling Terms	11
Chapter Summary	14
CHAPTER 2 Solutions, Mixtures, and Media	15
Introduction	15
2.1 Calculating Dilutions: A General Approach	15
2.2 Concentrations by a Factor of X	17
2.3 Preparing Percent Solutions	19
2.4 Diluting Percent Solutions	20
2.5 Moles and Molecular Weight—Definitions	24
2.5.1 Molarity	25
2.5.2 Preparing Molar Solutions in Water With Hydrated Compounds	27
2.5.3 Diluting Molar Solutions	30
2.5.4 Converting Molarity to Percent	31
2.5.5 Converting Percent to Molarity	32
2.6 Normality	33
2.7 pH	34
2.8 pK_a and The Henderson—Hasselbalch Equation	40
Chapter Summary	42

CHAPTER 3 Cell Growth	43
3.1 The Bacterial Growth Curve	43
3.1.1 Sample Data	47
3.2 Manipulating Cell Concentration	48
3.3 Plotting OD ₅₅₀ Versus Time on a Linear Graph	51
3.4 Plotting the Logarithm of OD ₅₅₀ Versus Time on a Linear Graph	52
3.4.1 Logarithms	52
3.4.2 Sample OD ₅₅₀ Data Converted to Log Values	52
3.4.3 Plotting Log OD ₅₅₀ Versus Time	52
3.5 Plotting the Log of Cell Concentration Versus Time	54
3.5.1 Determining Log Values	54
3.6 Calculating Generation Time	55
3.6.1 Slope and the Growth Constant	55
3.6.2 Generation Time	56
3.7 Plotting Cell Growth Data on a Semilog Graph	57
3.7.1 Plotting OD ₅₅₀ Versus Time on a Semilog Graph	58
3.7.2 Estimating Generation Time From a Semilog Plot of OD ₅₅₀ Versus Time	59
3.8 Plotting Cell Concentration Versus Time on a Semilog Graph	60
3.9 Determining Generation Time Directly From a Semilog Plot of Cell Concentration Versus Time	61
3.10 Plotting Cell Density Versus OD ₅₅₀ on a Semilog Graph	62
3.11 The Fluctuation Test	63
3.11.1 Fluctuation Test Example	65
3.11.2 Variance	66
3.12 Measuring Mutation Rate	68
3.12.1 The Poisson Distribution	69
3.12.2 Calculating Mutation Rate by Using the Poisson Distribution	70
3.12.3 Using a Graphical Approach to Calculate Mutation Rate From Fluctuation Test Data	71
3.12.4 Mutation Rate Determined by Plate Spreading	76
3.13 Measuring Cell Concentration on a Hemocytometer	77
Chapter Summary	78
Reference	79

CHAPTER 4 Working with Bacteriophage	81
Introduction	81
4.1 Multiplicity of Infection	81
4.2 Probabilities and Multiplicity of Infection	83
4.3 Measuring Phage Titer	89
4.4 Diluting Bacteriophage	91
4.5 Measuring Burst Size	93
Chapter Summary	96
CHAPTER 5 Nucleic Acid Quantification	97
5.1 Quantification of Nucleic Acids by Ultraviolet Spectroscopy	97
5.2 Determining the Concentration of Double-Stranded DNA	98
5.2.1 Using Absorbance and an Extinction Coefficient to Calculate Double-Stranded DNA Concentration	100
5.2.2 Calculating DNA Concentration as a Millimolar Amount	102
5.2.3 Using PicoGreen® to Determine DNA Concentration	104
5.3 Determining the Concentration of Single-Stranded DNA Molecules	107
5.3.1 Single-Stranded DNA Concentration Expressed in $\mu\text{g/mL}$	107
5.3.2 Determining the Concentration of High-Molecular-Weight Single-Stranded DNA in Picomoles per Microliter	108
5.3.3 Expressing ssDNA Concentration as a Millimolarity Amount	109
5.4 Oligonucleotide Quantification	109
5.4.1 Optical Density Units	109
5.4.2 Expressing an Oligonucleotide's Concentration in $\mu\text{g/mL}$	110
5.4.3 Oligonucleotide Concentration Expressed in Picomoles per Microliter	111
5.5 Measuring RNA Concentration	114
5.6 Molecular Weight, Molarity, and Nucleic Acid Length	114
5.7 Estimating DNA Concentration on an Ethidium Bromide-Stained Gel	120
5.8 Dye-Labeled Nucleic Acids	121
5.9 Limit of Detection and Limit of Quantitation	124
Chapter Summary	128
CHAPTER 6 Labeling Nucleic Acids With Radioisotopes	131
Introduction	131
6.1 Units of Radioactivity: The Curie	131
6.2 Estimating Plasmid Copy Number	132

CHAPTER 6	6.3 Labeling DNA by Nick Translation	134
	6.3.1 Determining Percent Incorporation of Radioactive Label From Nick Translation	135
	6.3.2 Calculating Specific Radioactivity of a Nick Translation Product	135
	6.4 Random Primer Labeling of DNA	136
	6.4.1 Random Primer Labeling—Percent Incorporation	137
	6.4.2 Random Primer Labeling—Calculating Theoretical Yield	138
	6.4.3 Random Primer Labeling—Calculating Actual Yield	139
	6.4.4 Random Primer Labeling—Calculating Specific Activity of the Product	140
	6.5 Labeling 3' Termini With Terminal Transferase	141
	6.5.1 3'-End Labeling With Terminal Transferase—Percent Incorporation	141
	6.5.2 3'-End Labeling With Terminal Transferase—Specific Activity of the Product	142
	6.6 Complementary DNA Synthesis	143
	6.6.1 First Strand Complementary DNA Synthesis	143
	6.6.2 Second Strand Complementary DNA Synthesis	147
	6.7 Homopolymeric Tailing	149
	6.8 In Vitro Transcription	155
	Chapter Summary	157
CHAPTER 7	Oligonucleotide Synthesis	161
	Introduction	161
	7.1 Synthesis Yield	162
	7.2 Measuring Stepwise and Overall Yield by the Dimethoxytrityl Cation Assay	164
	7.2.1 Overall Yield	165
	7.2.2 Stepwise Yield	166
	7.3 Calculating Micromoles of Nucleoside Added at Each Base Addition Step	167
	Chapter Summary	168
CHAPTER 8	The Polymerase Chain Reaction	171
	Introduction	171
	8.1 Template and Amplification	171
	8.2 Exponential Amplification	173
	8.3 Polymerase Chain Reaction Efficiency	176
	8.4 Calculating the T_m of the Target Sequence	179
	8.5 Primers	182

8.6	Primer T_m	187
8.6.1	Calculating T_m Based on Salt Concentration, G/C Content, and DNA Length.....	187
8.6.2	Calculating T_m Based on Nearest-Neighbor Interactions.....	188
8.7	Deoxynucleoside Triphosphates.....	194
8.8	DNA Polymerase.....	196
8.8.1	Calculating DNA Polymerase's Error Rate.....	197
8.9	Quantitative PCR.....	199
	Chapter Summary	211
	References	213
	Further Reading	213
CHAPTER 9	Real-Time PCR	215
	Introduction	215
9.1	The Phases of a Real-Time Polymerase Chain Reaction.....	216
9.2	Controls	218
9.3	Absolute Quantification by the TaqMan Assay	220
9.3.1	Preparing the Standards.....	220
9.3.2	Preparing a Standard Curve for Quantitative Polymerase Chain Reaction Based on Gene Copy Number.....	224
9.3.3	The Standard Curve.....	228
9.3.4	Standard Deviation	229
9.3.5	Linear Regression and the Standard Curve.....	233
9.4	Amplification Efficiency.....	235
9.5	Measuring Gene Expression.....	239
9.6	Relative Quantification: The $\Delta\Delta C_T$ Method	241
9.6.1	The $2^{-\Delta\Delta C_T}$ Method—Deciding on an Endogenous Reference	242
9.6.2	The $2^{-\Delta\Delta C_T}$ Method—Amplification Efficiency	253
9.6.3	The $2^{-\Delta\Delta C_T}$ Method: Is the Reference Gene Affected by the Experimental Treatment?	261
9.7	Relative Standard Curve Method	276
9.7.1	Standard Curve Method for Relative Quantitation	276
9.8	Relative Quantification by Reaction Kinetics	294
9.9	The R_0 Method of Relative Quantification.....	300
9.10	The Pfaffl Model	303
9.11	Digital Polymerase Chain Reaction.....	306
9.11.1	Confidence Interval.....	312
	Chapter Summary	315
	References	319
	Further Reading	320

CHAPTER 10 Recombinant DNA	321
Introduction	321
10.1 Restriction Endonucleases	321
10.1.1 The Frequency of Restriction Endonuclease Cut Sites	323
10.2 Calculating the Amount of Fragment Ends	324
10.2.1 The Amount of Ends Generated by Multiple Cuts	325
10.3 Ligation	327
10.3.1 Ligation Using λ -Derived Vectors	329
10.3.2 Packaging of Recombinant λ Genomes	334
10.3.3 Ligation Using Plasmid Vectors	337
10.3.4 Transformation Efficiency	341
10.4 Genomic Libraries—How Many Clones Do You Need?	343
10.5 cDNA Libraries—How Many Clones Are Enough?	344
10.6 Expression Libraries	345
10.7 Screening Recombinant Libraries by Hybridization to DNA	
Probes	347
10.7.1 Oligonucleotide Probes	349
10.7.2 Hybridization Conditions	350
10.7.3 Hybridization Using Double-Stranded DNA Probes	356
10.8 Sizing DNA Fragments by Gel Electrophoresis	357
10.9 Generating Nested Deletions Using Nuclease BAL 31	365
Chapter Summary	369
References	373
CHAPTER 11 Protein	375
Introduction	375
11.1 Calculating a Protein's Molecular Weight From Its Sequence	375
11.2 Determining a Protein's Molecular Weight by Sodium Dodecyl Sulfate Polyacrylamide Gel Electrophoresis	379
11.3 Protein Quantification by Measuring Absorbance at 280 nm	382
11.4 Using Absorbance Coefficients and Extinction Coefficients to Estimate Protein Concentration	383
11.4.1 Relating Absorbance Coefficient to Molar Extinction Coefficient	386
11.4.2 Determining a Protein's Extinction Coefficient	388
11.5 Relating Concentration in Milligrams per Milliliter to Molarity	390
11.6 Protein Quantitation Using A_{280} When Contaminating Nucleic Acids Are Present	391
11.7 Protein Quantification at 205 nm	392

Biography

11.8	Protein Quantitation at 205 nm When Contaminating Nucleic Acids Are Present	393
11.9	Labeling Proteins With Fluorescent Dyes	394
11.10	Measuring Protein Concentration by Colorimetric Assay—The Bradford Assay	397
11.11	Thin-Layer Chromatography and R_f	399
11.12	Estimating a Protein's Molecular Weight by Gel Filtration	401
11.13	Protein Volume	406
11.14	Using β -Galactosidase to Monitor Promoter Activity and Gene Expression	408
11.14.1	Assaying β -Galactosidase in Cell Culture	408
11.14.2	Specific Activity	410
11.14.3	Assaying β -Galactosidase From Purified Cell Extracts	411
11.15	The Chloramphenicol Acetyltransferase Assay	412
11.15.1	Calculating Molecules of Chloramphenicol Acetyltransferase	415
11.16	Use of Luciferase in a Reporter Assay	416
11.17	DNA Polymerase Activity	417
11.18	In Vitro Translation—Determining Amino Acid Incorporation	421
11.19	The Isoelectric Point of a Protein	422
	Chapter Summary	425
	References	428
	Further Reading	429
CHAPTER 12	Centrifugation	431
	Introduction	431
12.1	Relative Centrifugal Force (g Force)	431
12.1.1	Converting g Force to Revolutions per Minute	433
12.1.2	Determining g Force and Revolutions per Minute by Use of a Nomogram	434
12.2	Calculating Sedimentation Times	436
	Chapter Summary	438
	Further Reading	438
CHAPTER 13	Forensics and Paternity	439
	Introduction	439
13.1	Alleles and Genotypes	440
13.1.1	Calculating Genotype Frequencies	441
13.1.2	Calculating Allele Frequencies	442

13.2	The Hardy—Weinberg Equation and Calculating Expected Genotype Frequencies	443
13.3	The Chi-Square Test—Comparing Observed to Expected Values	446
13.3.1	Sample Variance	449
13.3.2	Sample Standard Deviation	450
13.4	The Power of Inclusion	451
13.5	The Power of Discrimination	452
13.6	DNA Typing and a Weighted Average	453
13.7	The Multiplication Rule	454
13.8	The Paternity Index	454
13.8.1	Calculating the Paternity Index When the Mother's Genotype Is Not Available	456
13.8.2	The Combined Paternity Index	458
	Chapter Summary	459
	More Problems	460
	References	462
	Further Reading	462
	Appendix A: Using Microsoft Excel's Graphing Utility	465
	Index	477
