ix

1. Comparative Biology of the Pentraxin Protein Family: Evolutionarily Conserved Component of Innate Immune System 1

Peter B. Armstrong

1. Introduction	2
2. Characteristics of the Pentraxin Proteins	4
3. Acute-Phase Response	12
4. Contribution of the Pentraxins to Immune Defense	13
5. Pentraxins Contribute to Tissue Injury Repair, Tissue Remodeling, and Tissue Stability	31
6. Summary and Prospects for Future Research	36
Acknowledgments	39
References	40

2. New Insights into the Role of Ficolins in the Lectin Pathway of Innate Immunity 49

Yuichi Endo, Misao Matsushita, Teizo Fujita

1. Introduction	50
2. General Features of the Ficolin Family	52
3. Unique Function of Ficolins in Activation of Complement	67
4. Innate Immune Function of Ficolins in Endogenous Homeostasis	77
5. Association of Ficolins with Diseases	81
6. Phylogeny of the Ficolin Family and Evolution of Complement System	86
7. Concluding Remarks	95
Acknowledgments	97
References	97

3. Leguminous Plants: Inventors of Root Nodules to Accommodate Symbiotic Bacteria 111

Takuya Suzuki, Emiko Yoro, Masayoshi Kawaguchi

1. Introduction	112
2. Nodule Developmental Process	113
3. Rhizobial Invasion Process	126

4. Concluding Remarks and Future Perspectives	144
Acknowledgments	145
References	145
4. New Insights into the Mechanisms of Mammalian Erythroid Chromatin Condensation and Enucleation	159
Peng Ji	
1. Introduction	160
2. Chromatin Condensation and Terminal Erythropoiesis	162
3. Membrane and Cytoskeleton Changes during Terminal Erythropoiesis and Enucleation	164
4. Extracellular Environment in Enucleation	173
5. Concluding Remarks	176
Acknowledgments	177
References	178
5. Store-Operated Calcium Entry: Unveiling the Calcium Handling Signalex	183
Pedro C. Redondo, Juan A. Rosado	
1. Introduction	184
2. Store-Operated Calcium Entry: Initial Hypothesis	186
3. STIM1-Orai1 Model	200
4. Regulation of SOCE by Membrane Domains and Scaffold Proteins	207
5. Concluding Remarks	210
Acknowledgments	211
References	211
6. Endoplasmic Reticulum Stress Signaling in Mammalian Oocytes and Embryos: Life in Balance	227
Keith E. Latham	
1. Introduction	228
2. Overview of UPR and ERSS	229
3. Interactions with Other Signaling Pathways	232
4. Chemical Activators and Inhibitors of ER Stress	234
5. Relationship of ERSS Pathways to Oocyte Maturation and Early Embryogenesis	239
6. Activation and Inhibition of ER Stress in Oocytes and Embryos	240

7. Unique Considerations for ERSS in Oocytes and Embryos—Developmental Outcomes	247
8. Concluding Remarks	249
Acknowledgments	250
References	250

7. Molecular, Cellular, and Physiological Significance of N-Terminal Acetylation 267

Henriette Aksnes, Kristine Hole, Thomas Arnesen

1. Introduction	268
2. N-Terminal Acetyltransferases	269
3. Nt-Acetylation: A Widespread Protein Modification	272
4. Proteins are Differentially Affected by Nt-Acetylation	274
5. Cellular Phenotypes of NAT Deletion and Depletion	280
6. NATs in Physiological Processes	289
7. Methods to Study Nt-Acetylation	294
8. Concluding Remarks	296
References	297
