ix

1. How Rab Proteins Determine Golgi Structure	1
Shijie Liu, Brian Storrie	
1. Introduction	2
2. Rab Proteins and Their Subfamilies	3
3. Golgi Apparatus and Its Organization	5
4. Two Major Functional/Phenotypic Classes of Rab Proteins Based on Their Effects on Golgi Ribbon Organization	7
5. Mechanistic Effect of Rab Proteins on Golgi Ribbon Organization	13
6. Conclusions and Perspectives	17
Acknowledgments	18
References	18
2. Amyotrophic Lateral Sclerosis as a Spatiotemporal Mislocalization Disease: Location, Location, Location	23
Noga Gershoni-Emek, Michael Chein, Shani Gluska, Eran Perlson	
1. Introduction	24
2. Amyotrophic Lateral Sclerosis	25
3. Axonal Transport	28
4. RNA-Binding Proteins	38
5. Neurotrophic Factors and Their Precursor Forms	43
6. Death Signals	46
7. Amyloid Precursor Protein	51
8. Concluding Remarks	52
Acknowledgments	55
References	55
3. Malleable Mitochondrion of <i>Trypanosoma brucei</i>	73
Zdeněk Verner, Somsuvro Basu, Corinna Benz, Sameer Dixit, Eva Dobáková, Drahomíra Faktorová, Hassan Hashimi, Eva Horáková, Zhenqiu Huang, Zdeněk Paris, Priscila Peña-Díaz, Lucie Ridlon, Jiří Týč, David Wildridge, Alena Zíková, Julius Lukeš	
1. Introduction	74
2. Maintenance and Expression of Genetic Information	76

3. Mitochondrial Import	94
4. Mitochondrial Metabolism	104
5. Structural Proteins and Fission	124
6. Concluding Remarks	126
Acknowledgments	127
References	127
4. Heredity and Self-Organization: Partners in the Generation and Evolution of Phenotypes	153
Nicolas Malagon, Ellen Larsen	
1. Introduction	154
2. Self-Organization in Biology	156
3. Internal Descriptions, Developmental Limitations and Buffering Variation	169
4. Conclusions	177
Acknowledgments	178
References	178
5. Nuclear Compartments, Genome Folding, and Enhancer-Promoter Communication	183
Sergey V. Ulianov, Alexey A. Gavrilov, Sergey V. Razin	
1. Introduction	184
2. Juxtaposition of Genome Regulatory Elements: Active Chromatin Hub or Active Nuclear Compartment?	186
3. Dynamic Contacts rather than Rigid Complexes	190
4. Driving Forces of Communication within Cell Nucleus	194
5. Functional Compartmentalization of Eukaryotic Cell Nucleus	206
6. Nuclear Compartmentalization and Chromosome Folding: Attempt to Present Integral View	218
7. Concluding Remarks	224
Acknowledgments	226
References	226
6. Modifiers of Membrane Dipole Potentials as Tools for Investigating Ion Channel Formation and Functioning	245
Olga S. Ostroumova, Svetlana S. Efimova, Valery V. Malev	
1. Introduction	246
2. Lipid Bilayers and Methods Used for Studying Effects of Dipole-Modifying Agents on Membrane Conductance	250

3. Factors Affecting Magnitude of Membrane Dipole Potential	254
4. Effect of Dipole Potential on Channel-Forming Activity of Antimicrobial Agents	263
5. Effects Resulting from Modulation of Other Physical Properties of Lipid Bilayers by Dipole-Modifying Agents	272
6. Interaction between Dipole Modifiers and Channel-Forming Molecules	282
7. Concluding Remarks	286
Acknowledgments	286
References	286
7. Link between Aneuploidy and Chromosome Instability	299
Joshua M. Nicholson, Daniela Cimini	
1. Introduction	299
2. Effect of Aneuploidy on Cellular Homeostasis	300
3. Effect of Aneuploidy on Chromosome Stability	304
4. Role of Aneuploidy and CIN in Adaptation and Disease	308
5. Conclusions and Perspectives	311
Acknowledgments	312
References	313
<i>Index</i>	319
