Editor's Foreword	xi
Preface: Defining Polarity	xiii

1. Cell Polarity in Oocyte Development

Denise Oh, Douglas W. Houston

Introduction	1
Oogenesis and the Establishment of Animal–Vegetal Polarity	3
Origin of Animal–Vegetal Polarity During Oogenesis	6
<i>Xenopus</i>	8
Zebrafish	8
Mouse	9
Polarity and the Ovarian Stem Cell	10
Structural Basis for Mitochondrial Cloud/Balbani Formation	11
Macf1	12
Buckyball	12
Generation of Cortical Polarity in the Oocyte and Egg	14
Cortical Polarity and Sperm Entry	15
Apical–Basal Polarization of the <i>Xenopus</i> Egg	16
Cortical Polarity and Superficial Cell Fate	17
Concluding Remarks	19
Acknowledgments	20
References	20

2. Pluripotency—What Does Cell Polarity Have to Do With It?

Tristan Frum, Amy Ralston

Mammalian Pluripotency	31
Cell Polarity in the Mammalian Embryo	33
The Emergence of Pluripotency in the Mouse Embryo	33
Cell Polarity in the Mammalian Early Embryo	38
How Cell Polarity Regulates Establishment of Pluripotency in the Mouse Embryo	43

Cell Polarity and Embryo-Derived Pluripotent Stem Cell Lines	47
Multiple States of Pluripotency	48
Polarization of Pluripotent Stem Cell Lines	49
Cell Polarization During Somatic Cell Reprogramming	50
Conclusions	51
Acknowledgments	51
References	52
 3. Cell Polarity and Asymmetric Cell Division by the Wnt Morphogen	
Austin T. Baldwin, Bryan T. Phillips	
Introduction	61
Binary Cell Fate Specification via Asymmetric Cell Division	61
PAR Proteins Polarize <i>Caenorhabditis elegans</i> Zygotes	63
Delta/Notch Signaling Drives Asymmetric Cell Division in Fly Neuroblasts	64
Morphogens as Cell Polarizers	65
Wnt/ β -Catenin Signal Transduction	66
Wnt/ β -Catenin Asymmetry and Asymmetric Cell Division in <i>Caenorhabditis elegans</i>	72
The <i>Caenorhabditis elegans</i> Epidermal Seam Stem Cell Lineage Undergoes Reiterative Asymmetric Cell Divisions	76
Asymmetric Cell Divisions in the <i>Caenorhabditis elegans</i> Seam Require Wnt Signaling	78
SYS-1/ β -Catenin Inheritance Is Limited by Centrosomal Degradation	81
<i>Caenorhabditis elegans</i> /Asymmetric Cell Division-Specific Phenomena	82
PRY-1/Axin Is Upstream of the Destruction Complex	82
KIN-19 Versus GSK-3 Function in β -Catenin Regulation	84
The Future of Wnt/ β -Catenin and Asymmetric Cell Division	85
APR-1 as the Key Regulator of Differential W β A Outputs	85
Dishevelled Balances Wnt/ β -Catenin Asymmetry Outputs	87
Wnt Ligands and Receptors	89
Concluding Remarks	89
Acknowledgments	91
References	91
 4. Cell Polarity in Morphogenesis—Planar Cell Polarity	
Noopur Mandrekar, Baihao Su, Raymond Habas	
Introduction	103
The Planar Cell Polarity Pathway	106
Wnts	106
Asymmetric Protein Localization: From Flies to Vertebrates	107

Role of Cytoskeletal Components During Gastrulation	111
Actin	111
Microtubules	112
Planar Cell Polarity Regulation: Cross Talk Between Cytoskeletal Components	113
Planar Cell Polarity in Vertebrates	113
Conclusions	114
References	115
 5. Polarized Membrane Trafficking in Development and Disease: From Epithelia Polarization to Cancer Cell Invasion	
<i>Erik Linklater, Cayla E. Jewett, Rytis Prekeris</i>	
Introduction	121
Epithelial Polarity and Lumen Formation	122
Membrane Transport and Polarization of Individual Epithelial Cells	122
Polarized Membrane Transport and Apical Lumen Formation During Epithelial Tissue Morphogenesis	125
Regulation of De Novo Lumen Formation In Vivo	128
Polarized Membrane Transport During Cancer Metastasis and Development	130
Podosomes and Cell Migration	130
Invadopodia and Cancer Cell Metastasis	132
Membrane Transport and MMP Targeting During Invadopodia Formation	134
Concluding Remarks	138
Acknowledgments	139
References	139
 6. Planar Cell Polarity and the Cell Biology of Nervous System Development and Disease	
<i>J. Robert Manak</i>	
Introduction	147
Breaking the Rules	149
Effectors of Planar Cell Polarity Genes	150
Axonal Determination/Polarization: Connections to Polarity Genes	150
Planar Cell Polarity Mutants Exhibit Axonal Extension Defects	153
Axonal Extension and the Dynamics of the Cytoskeleton	154
Lamellipodia and Filopodia Use Different Actin Nucleators	156
Neuronal Cell Migration Uses the Same Players as During Axonal Polarization	157

The Adherens Junction: A Convergence of Interdependent Signaling Complexes	158
Focal Adhesions: Reinventing the Adherens Junction for Cellular Movement and Migration	166
Convergence Extension Defects Leading to Open Neural Tube	168
Conclusions	168
Acknowledgments	169
References	169
7. Planar Cell Polarity in Ciliated Epithelia	
<i>Peter Walentek, Camille Boutin,* Laurent Kodjabachian</i>	
Introduction	177
Initiation and Coordination of Tissue-Level Planar Polarity in Ciliated Epithelia	181
<i>Xenopus</i> Embryonic Epidermis	181
Mouse Trachea	187
Mouse Ependyma	188
Transmission of Planar Cell Polarity to Basal Bodies in Multiciliated Cells	191
The <i>Xenopus</i> Mucociliary Epidermis	192
Mouse Trachea	196
Mouse Ependyma	197
Future Challenges	200
General Conclusion	202
Acknowledgments	202
References	203
Index	211
