Preface	xvii	The Overview of Three Different Phases of Replication	30
Acknowledgments	xix	Semidiscontinuous DNA Replication Mechanism	32
		Eukaryotic DNA Replication	32
1. Nucleic Acids: DNA and RNA		Proteins Required for DNA Replication in <i>E. coli</i>	32
DNA/RNA Is Genetic Material	1	Helicase and Single-Strand DNA Binding Proteins	32
Transformation in Bacteria	1	DNA Gyrase	34
DNA Is the Genetic Material for Bacteria	2	Primase	35
DNA Is the Genetic Material for Bacteriophage	2	DNA Polymerase	36
RNA Is the Genetic Material for Viruses	6	Coupling DNA Replication	38
The Components of Nucleic Acids	6	The Replisome	38
Nitrogenous Base	6	The Assembly of the Replisome	38
Pentose Sugar	6	Replication Patterns	39
Phosphate Group	6	Bidirectional Replication	39
The Formation of a Nucleotide	6	Rolling Circle Replication	39
The Structure of DNA Molecules	9	Termination of Replication	40
Chargaff's Rules	9	Replication at the Telomere	42
The Arrangement of Each Subunit in the DNA Structure	11	Mitochondrial Replication	43
Alternative Forms of DNA Exist	13	Fidelity of DNA Replication	44
Various Forms of RNA	14	Proofreading Mechanism	44
Physical Properties of Nucleic Acids	15	Polymerase Exonuclease Activity	44
DNA Denaturation	15	DNA Mutation	45
Secondary Structure of DNA	15	Point Mutation	45
Tertiary Structure of DNA	15	Insertion and Deletion	45
Secondary and Tertiary Structure of RNA	18	Tautomeric Shifts	45
DNA Topoisomerase Catalytic Mechanisms	20	Mismatch Repair	46
Type I Topoisomerases	20	DNA Damage	47
Type II Topoisomerases	23	Base Analogs	48
The Cellular Roles of the Various Topoisomerases	23	Alkylating Agents	48
Kinetics of RNA Folding	24	UV Radiation	49
		Ionizing Radiation	49
		Byproducts Damage	50
		Damage Repair: Single-Strand Damage Repair	50
		DNA Repair Through Undoing the Damage	50
		Excision Repair System	50
		Postreplication Repair and SOS Repair System	52
		Damage Repair: Double-Strand Break Repair	53
		Homologous Recombination	55
		Nonhomologous End Joining (NHEJ)	56
2. Nucleic Acid-Based Cellular Activities			
DNA Replication	27		
The DNA Replication Hypothesis	28		
DNA Replication Follows the Semiconservative Replication Mechanism	29		
The Process of DNA Replication	30		

3. Gene Expression: Transcription of the Genetic Code

General Features of RNA Synthesis	59
Template Strand	59
Coding Strand	59
Promoters	60
Promoter Structure—Consensus Sequences	60
Promoter Structure—UP Element	61
RNA Polymerase in <i>Escherichia coli</i>	61
The Content of the Holoenzyme	61
The Role of Sigma (σ) in Transcription	61
The Process of Transcription	61
Initiation	61
Elongation	65
Termination	65
The Regulation of Prokaryotic Transcription	66
Alternative σ Factors	66
RNA Polymerase Switching	67
Antitermination	67
Operons	69
Enhancers	71
Transcription Attenuation	73
Riboswitches	73
Transcription in Eukaryotes	74
Eukaryotic RNA Polymerase	74
Promoter Structure	74
RNA Polymerase I and III-Directed Transcription	74
The Order of Events in Eukaryotic Transcription	
Initiation	75
The Role of Transcription Factors—General Transcription Factors	75
The Role of Transcription Factors—Transcription Activators	77
Epigenetic Regulation of Eukaryotic Transcription	78
Transcription Elongation Through the Nucleosomal Barrier	79
Nucleosome Mobilization	81
H2A-H2B Dimer Removal	81
Posttranscriptional Modification of mRNA	81
The Cap at the 5' End of Eukaryotic mRNA	81
Capping and Polyadenylation Processes	82
RNA Splicing	83
Noncoding RNAs	84
The mRNA Degradation Mechanism Directed by siRNA	84
The mRNA Degradation Mechanism Directed by miRNA	85
Both siRNA and miRNA Can Repress Transcription	86

4. Gene Expression: Translation of the Genetic Code

The Structure and Properties of Amino Acids	87
General Structure of Amino Acids	87
Enantiomeric Molecules	88
Classifications of Amino Acids	89
Nonpolar Amino Acids	89
Neutral (Uncharged) but Polar Amino Acids	91
Acidic Amino Acids That Have a Net Negative Charge at pH 7.0	92
Basic Amino Acids That Have a Net Positive Charge at pH 7.0	92
Alternative Classification of Amino Acids	92
Amino Acids Can Join Through Peptide Bonds to Form polymers	92
Zwitterions	93
Protein Structure	93
Primary Structure	93
Secondary Structure	93
Tertiary Structure	96
Quaternary Structure	96
Folding into Three-Dimensional Protein Structure	97
Fibrous Proteins	97
Globular Proteins	98
Membrane Proteins	99
Protein Denaturation	100
The Genetic Code	100
Ribonucleotide Bases Are Used as Letters in the Genetic Code	100
Wobble Rules	100
Translational Machinery: Ribosome	102
The Components of Ribosomes	102
Ribosomal Structure	103
Translational Machinery: tRNA	104
The Structure of tRNA	104
The Secondary Structure of tRNA	104
The Active Form of tRNA	104
Preparation for the Translation	106
Activation of tRNA	106
Dissociation of Ribosomes	106
Aminoacyl-tRNA Synthetases	107
Classification of Aminoacyl-tRNA Synthetase	107
Second Genetic Code	107
Proofreading Activity of Aminoacyl-tRNA Synthetases	109
Prokaryotic Translation	109
Translation Initiation	109
Translation Elongation	110
Translation Termination	112
Coupled Translation	113

Eukaryotic Translation	113	Moderately Repetitive Sequences: Tandem	133
Initiation	113	Repeated DNA—VNTRs and STRs	134
Elongation	113	Highly Repetitive Sequences	135
Termination	114	Eukaryotic Genome Carries DNA	
Posttranslational Modification Proteins	114	Sequences That Do Not Encode	
Molecular Chaperones	114	Functional Genes	135
Ubiquitinylation: A Process of Protein		Organelle Genomes	135
Degradation	115	Genome Evolution	135
Sumoylation	115	Introduction of Mutation	135
		Fixation of Mutation	136
		Evolutionary Rate	136
5. The Genome		Mechanisms of Genome Evolution	136
The Eukaryotic Cell Cycle and Chromosome		Duplication	136
Dynamics	117	<i>De Novo</i> Origination	138
The Cell Cycle	117	Horizontal Gene Transfer	139
Chromosome Dynamics During the		Gene Recombination	139
Cell Cycle	118	New Gene Regulatory Systems	139
The Genome in Bacteria and Viruses	118	Transposable Elements	139
Bacterial Genome	118	Molecular Evolution of Repetitive	
The Organization and Dynamics of		Sequences	139
Bacterial Chromosome	120	Evolution Rate of Repetitive DNA Sequences	140
Nucleoid-Associated Proteins	120	Evolution of the Prokaryotic Genome	140
Viral Genome	121	Genome Reduction: The Streamlining	
Eukaryotic Chromosome Structure	121	Hypothesis	141
Human Chromosome: An Example of a		Genome Reduction: The Muller Ratchet	141
Eukaryotic Genome	121	The Impact of Genome Reduction on	
Assembly of the Nucleosome Structure	122	Host-Associated Bacteria	141
Histone Variants	123		
Higher Order Chromatin Structure	124	6. Extraction and Purification	
30-nm Chromatin Fiber	124	of Nucleic Acids and Proteins	
Loops and Coils	126	The Importance of DNA Extraction	143
Variation in Chromatin Structure:		DNA Extraction From Whole Blood Sample	144
Euchromosome and Heterochromosome	126	Ficoll-Directed Density Gradient Through	
Mitotic Chromosome and Its Structural		Centrifugation	144
Organization	127	Quick Extraction Through Proteinase K and	
Unique Animal Chromosomes	127	Phenol	144
Lampbrush Chromosome	128	DNA Extraction From Dry Blood Spots	145
Polytene Chromosomes	128	Dry Blood Spot Preparation	145
Specialized DNA Sequences in Eukaryotic		Release the DNA From the Dry Blood Spot	145
Chromosomes	129	Noninvasive Human DNA Isolation	146
Origin of Replication	129	Genomic DNA Purification From Hair	146
Centromere	130	Genomic DNA Purified From Saliva	146
Telomere	131	Genomic DNA Extraction From Urine	
Complexity and Gene Number	131	Sample	146
Gene Number	131	Comparison of Different Extraction	
Genome Size	132	Methods	146
The Genome Size Is Not Necessarily		DNA Preparation From Microorganisms	147
Related to the Gene Number in Eukaryotes	133	Chemical Methods	147
The Features of Genomic Sequences	133	Chelex-100 Method	147
Nonrepetitive DNA	133	Nucleic Acid Purification	147
Moderately Repetitive Sequences:		Organic Purification	148
Interspersed Elements—Repetitive		Inorganic Purification	149
Transposed Sequences	133		

Solid-Phase Nucleic Acid Extraction	149	Conformation of DNA Molecules and the Mobility	174
Diatomaceous Earth Extraction	149	Gel Buffer	174
Affinity Extraction	149	DNA Size Tracking Dye and Density Agents	175
Anion-Exchange Extraction	151	Visualization of DNA	176
DNA Preparation From Formalin-Fixed, Paraffin-Embedded Tissues	151	Polyacrylamide Gels	176
The Mechanism of Fixation by Formaldehyde	152	The Chemistry of Polyacrylamide Gel	177
Deparaffinization	153	The Principle of Polyacrylamide Gel	177
RNA Preparation	154	Mobility of DNA Molecules in Acrylamide Gel	177
Handling RNA	154	Special Application of Polyacrylamide Gel Electrophoresis: Denaturing Gradient Gel Electrophoresis (DGGE)	178
Effects of Storage Conditions on RNA Quality	154	Pulsed-Field Gel Electrophoresis for Large DNA Molecules	179
Extraction of RNA	155	The Basic Principle of Pulsed Field Types of PFGE	181
Guanidinium Thiocyanate Phenol-Chloroform Extraction	156	Application of PFGE	182
Spin Column Method	156	Capillary Electrophoresis	182
Isolation of Poly(A) ⁺ RNA	157	Setup of the Capillary Electrophoresis	183
Removal of rRNA	158	Mobility of the Analytes	183
Protein Preparation	159	Separation of DNA Molecules	184
Gentle Cell Disruption	159		
Mechanical Rupture	159	8. Quantification and Analysis of Proteins	
Cell Lysis Conditions	160		
Enzymatic Degradation During Cell Lysis	160	Protein Quantitation	187
Lysis Buffer	160	UV Spectroscopy Method: Detecting Proteins With Absorbance at 280nm	188
Protein Quality Under Different Lysis Conditions	161	UV Spectroscopy Measurement: Detecting Proteins With Absorbance at 205nm	190
Preparation of Clean Protein Samples	161	Spectrofluorometric Measurement: Detecting Proteins by Intrinsic Fluorescence Emission	191
Contaminant Removal by Precipitation	161	Colorimetric Protein Assay Techniques	191
Acetone Precipitation	161	Biuret Reaction	191
TCA Precipitation	162	Lowry Method	191
Methanol-Chloroform Precipitation	163	Bradford Method	192
Problems Caused by the Precipitation	163	Bicinchoninic Acid Assay (BCA) Method	192
Protein Extraction From Archival Formalin-Fixed Paraffin-Embedded Tissues	163	Standards and Assay Validation	192
Problems Caused by the Formalin in Tissue Extraction	164	Fluorescent Dye-Based Assays	193
Possible Solutions for PPFE Sample Extraction: Heat-Induced Antigen Retrieval (AR) for Tissue Extraction	164	Microplate Detection Method	193
		Cuvette Detection Method	193
7. Detection and Analysis of Nucleic Acids		The Limitations of Using Fluorescent Dyes	193
Determining DNA Purity and Yield	167	The Choice of Measurement Format	193
UV Spectrometry	167	Cuvette Measurement Method	193
NanoDrop Spectrometry	169	Cuvette Cleaning Method	194
Fluorometric Methods	170	Microplate Method	194
Real-Time PCR Method	171	Preparation of Samples for Measurement	194
Molecular Separation of DNA	172	Molecular Separation of Protein Molecules Through Column Chromatography	194
Basic Principles of Electrophoresis	172	Size Exclusion Chromatography	194
Agarose Gel Electrophoresis	172	Ion-Exchange Chromatography	194
The Gel Matrix	173	Affinity Chromatography	196
Orientation of the Agarose Gel	173	Hydrophobic Interaction Chromatography	198
Size of DNA Molecules and the Mobility	173		

Molecular Separation Through Electrophoresis	198	Multiplex Polymerase Chain Reaction	219
Sodium Dodecyl Sulfate-Polyacrylamide Gel Electrophoresis (SDS-PAGE)	198	Digital Polymerase Chain Reaction	220
Gel Staining After Electrophoresis: Colorimetric Staining Methods	199	Parameters That Affect PCR	220
Gel Staining After Electrophoresis: Fluorescence Staining Method	199	The Size of the PCR Product	220
Gel-Based Proteomics: Protein Separation	199	The Lengths of the Primers	221
Two-Dimensional Gel Electrophoresis	200	Annealing Temperature	221
First Dimension Electrophoresis: Conventional Isoelectric Focusing	200	Quantitative PCR	223
First Dimension Electrophoresis: Immobilized pH Gradient (IPG)	202	The Comparison Between qPCR and Conventional PCR	224
First Dimension Electrophoresis: Nonequilibrium pH Gel Electrophoresis	202	Real-Time PCR Instruments	224
Second Dimension SDS-PAGE	202	Real-Time PCR Detection Chemistry	224
Postelectrophoresis	202	DNA Intercalating Dyes for qPCR	225
The Analysis of 2DE Images	203	Principles of the Intercalating Dyes	225
Modification of 2DE: Two-Dimensional Difference Gel Electrophoresis	203	Comparison Between SYBR Green and EvaGreen	226
Sample Buffer Constituents for 2DE	206	Fluorophore-Labeled Oligonucleotides for qPCR	226
Chaotropic Agents	207	The Principle of Fluorophore-Labeled Oligonucleotides	226
Detergents	207	Types of Fluorophores Used in qPCR	227
Reducing Agents	207	Fluorophore-Labeled Oligonucleotides: Primer-Probe Chemistries	227
Carrier Ampholytes	208	Hairpin Primer-Probes	227
Removal of Interfering Contaminants	208	Cyclicon Primer-Probes	229
Gel Free Proteomics Techniques: Capillary Electrophoresis	208	Angler Primer-Probes	230
The Principles of Capillary Electrophoresis	208	Fluorophore-Labeled Oligonucleotides: Probes-Based Chemistry	231
Microchip Electrophoresis	208	Hydrolysis Probes	231
Gel Free Proteomics Techniques: Liquid Chromatography	209	Hybridization Probes	232
Reversed-Phase HPLC	209	Fluorophore-Labeled Oligonucleotides: Nucleic acid Analogues	234
Affinity HPLC	211	PNAs	234
Gel-Permeation HPLC	211	LNA	234
Ligand-Exchange HPLC	211	ZNA	234
Capillary Electrochromatography	211	Nonnatural Bases: Plexor Primers	234
Comparison of Various Chromatographic Methods	212	Isothermal Amplification Techniques	234
Protein Analysis: Mass Spectrometer	213	Nucleic Acid Sequence-Based Amplification (NASBA)	236
ESI-MS	213	Signal-Mediated Amplification of RNA Technology (SMART)	237
MALDI-TOF	213	Strand Displacement Amplification (SDA)	238
		Rolling Circle Amplification	240
		Loop-Mediated Isothermal Amplification (LAMP)	240
		Isothermal Multiple Displacement Amplification	242
		Single Primer Isothermal Amplification	243
		Helicase-Dependent Amplification (HDA)	243
9. Amplification of Nucleic Acids		10. Characterization of Nucleic Acids and Proteins	
Conventional Amplification Technique: The Polymerase Chain Reaction	215	Nucleases	249
Three Steps of a PCR Reaction	216	Endonucleases for Cutting DNA: Restriction Enzymes	251
Analysis of PCR Products	218		
Modified Nucleic Acid Amplification Techniques	218		
Reverse-Transcriptase Polymerase Chain Reaction	218		
Nested Polymerase Chain Reaction	219		

Whole Transcriptome Analysis With Sequencing Methods and Technologies	312	13. Molecular Diagnosis of Chromosomal Disorders	
Transcriptome Sequencing: Whole Transcriptome Shotgun Sequencing—EST (Expressed Sequence Tag) Sequencing		Chromosome Morphology	331
Procedure	312	The Role of Centromere	331
Source of EST Library	312	Location and Classification of Centromere	332
Preparation of EST Library	312	Cytogenetic Methods for Chromosome	332
Transcriptome Sequencing: Whole Transcriptome Shotgun Sequencing—RNA-seq Procedure	312	The Karyotype	332
The Principle and the Procedure	312	The Methods to Prepare the Karyotype	333
Comparison Between EST and RNA-seq	314	Conventional Cytogenetics	333
Analysis of RNA-seq	314	The Conventional Approach to Prepare the Karyotype	333
Challenges of RNA-seq Analysis	315	Banding Patterns	333
Whole Transcriptome Tag/Target Sequencing With Restriction Digestion—SAGE (Serial Analysis of Gene Expression)	315	Detection of Genome and Chromosomal Mutations	335
Increase of the Number of Tags Can Simplify SAGE Analysis Procedures	315	Molecular Cytogenetics: Fluorescence In Situ Hybridization (FISH)	335
Elongation of Tag/Target Sizes in SAGE Analysis	317	The In Situ Hybridization (ISH)	335
Problem With Restriction Digestion and the Solution	317	The Fluorescence In Situ Hybridization (FISH)	336
Whole Transcriptome Tag/Target Sequencing Without Restriction Digestion	318	The Metaphase FISH	337
Transcriptome Profiling of 3'-Ends With Enrichment of PolyA+ RNA	318	Detection Techniques	337
Transcriptome Profiling of 3'-Ends With Enrichment of PolyA+ cDNA	319	Interphase FISH	338
Transcriptome Profiling of 3'-Ends With Custom Primers Containing Oligo(dT) at 3' End for Sequencing	320	FISH Probes	338
Whole Transcriptome Analysis With Sequencing: Profiling of Nonpolyadenylated RNAs	323	WCP Probes	338
Whole Transcriptome Analysis With Sequencing	324	Centromeric Enumeration Probes	339
Profiling of Circular RNAs	324	Locus-Specific Identifier (LSI) Probes	339
Profiling of RNA Methylation	324	Advances in FISH Technology	340
Profiling of 5'-Ends With Enrichment of 5'-G-CAP	325	MFISH and SKY	341
The RNA Structurome	325	Multicolor Banding (MCB)	342
Transcriptome-Wide RNA Structural Probing In Vivo	326	Comparative Genomic Hybridization (CGH)	342
Process for In Vivo RNA Structures		Array CGH	343
Transcriptome-Wide Techniques	326	FISH Applications in Prenatal and Postnatal Diagnostics and Research	345
Metabolomics for Genome-Wide Association Studies: Linking the Genome to the Metabolome	328	The Advantage of Using FISH in Clinical Diagnosis	345
The Principle of Metabolomics	328	The Limitation of Using FISH in Diagnosis	346
Genome-Wide Association Studies With Metabolomics (mGWAS)	329	Applications of CGH Analysis	346
		aCGH in Detecting Chromosomal Imbalance	346
		aCGH in Cancer Detection	346
		Prenatal Genetic Diagnosis Using aCGH	346
		Comparison of Different Rapid Prenatal Screening and Diagnosis	347
		aCGH in Preimplantation Genetic Diagnosis	347
		Chromosomal Disorders: Numerical Chromosome Abnormalities	349
		Trisomy 21	349
		Trisomy 18	350
		Trisomy 13	351
		Prader-Willi Syndrome	352

Chromosomal Disorders: Sex Chromosome Abnormalities	352	Mitochondria Disorders	383
Turner Syndrome	353	Diseases Caused by Mutations in Mitochondrial Dynamics Machinery	384
Klinefelter Syndrome	354	Dominant Optic Atrophy (DOA)	384
Chromosomal Disorders: Structural		Mitochondrial Dynamics in Neurodegenerative Diseases:	
Chromosome Abnormalities	354	Parkinson's Disease	385
Structural Variants	355		
SNP	356		
Types of Chromosomal Rearrangements	356		
The Causes of Chromosome Abnormalities	358		
Errors in Cell Division	358		
Maternal Age	358		
14. Molecular Diagnosis of Mutation and Inherited Diseases		15. Molecular Diagnosis of Infectious Diseases	
Variations That Cause Human Disease	359	Detection of Bacterial Pathogens, Fungal Pathogens, and Viruses	387
Single-Nucleotide Variants	359	Diagnosis Using NAATs	387
Small Insertions and Deletions	360	Diagnosis With Sequencing	389
Structural Variants	360	Detection of Bacteria	390
Alterations in Mitochondrial DNA and Hemizygous Genes	360	<i>Bartonellae</i> Species	390
Human Epigenetic Alterations	361	<i>Borrelia</i> Species	390
Choice of Techniques	361	<i>Chlamydia trachomatis</i>	392
The Application of PCR in Direct Mutation Tests	361	<i>Clostridium difficile</i>	393
Techniques Used in Unknown Mutations	363	<i>Mycoplasma pneumoniae</i>	393
Techniques Used in Detecting Gene Structural Changes	363	<i>Rickettsia</i> Species	394
Techniques Used for Many Unknown Mutations or an Unknown Gene	365	<i>Staphylococcus aureus</i>	394
Whole-Genome Analysis Techniques	366	<i>Streptococcus pneumoniae</i>	396
Single-Cell Sequencing	366	<i>Streptococcus pyogenes</i>	396
Single-Gene Disorders	367	<i>Streptococcus agalactiae</i>	396
Achondroplasia	367	Molecular Detection and Characterization of Fungal Pathogens	397
Alpha-1 Antitrypsin Deficiency	368	PCR Probes and PCR Formats	397
Autosomal Dominant Polycystic Kidney Disease	369	The Application of Sequencing Techniques	399
Cystic Fibrosis	371	Molecular Detection of <i>Aspergillus</i>	399
Duane's Retraction Syndrome	371	Detection of Viruses	400
Duchenne Muscular Dystrophy	371	Diagnoses of Human Immunodeficiency Virus Infection	400
Fragile X Syndrome	372	Molecular Detection of Human Papillomavirus	401
Hemophilia	373	Molecular Detection of Hepatitis Viruses	405
Huntington's Disease	373	The Detection of HBV	406
Marfan Syndrome	374	Emerging Technology: MALDI-TOF MS for Microbial Species Identification	406
Sickle Cell Disease	375	The Principle of MALDI-TOF MS in Clinical Analysis	409
Thalassemia	376	Sample Preparation	410
Tay-Sachs Disease	376		
Polygenic Disorders and Gene Clustering	377	16. Guidance for Molecular Clinical Laboratory	
Alcohol Dependence	378	The Need for Molecular Analysis	413
Charcot-Marie-Tooth Disease	379	The Request of Molecular Testing	413
Cri du chat Syndrome	382	Workflow of Molecular Test	414
Cardiovascular Disease (CVD)	382	Preanalytical Standards	414
		Reduction of Identification Errors	414
		Sample Receipt and Handling	414

Minimization of Cross-Contamination	415	Standardization and Quality Management	422
Quality Control Metrics	415	Quality Management (QM) and Quality Assurance (QA)	422
Specimen Requirements	415	Equipment Maintenance	423
DNA Requirements	415	Safety	424
Library Qualification and Quantification Requirements for NGS	416	Biological Hazards	424
Choice of Analytical Method	416	Chemical Hazards	425
Analytical Phase	417	Accreditation	427
DNA and RNA Extraction	417	External Quality Assessment (EQA) Scheme	428
Storage of DNA and RNA	418	Molecular Diagnosis Checklist	428
Standard Devices for Sample Quality Assessment	418	Monitor of the Quality	429
Validation of Comprehensive Molecular Assays	418	Challenges for Molecular Diagnosis in a Clinical Laboratory	429
