Section I

Spin Labeling Studies of Proteins

1. Saturation Recovery EPR and Nitroxide Spin Labeling for Exploring Structure and Dynamics in Proteins

3

Zhongyu Yang, Michael Bridges, Michael T. Lerch, Christian Altenbach, and Wayne L. Hubbell

1. Introduction

4

2. Theoretical Background and the Measurement of T_{1e} with SR

6

3. Instrumentation and Practical Considerations

9

4. Applications of Long-Pulse SR

11

5. Summary and Future Directions

22

References

23

2. High-Pressure EPR and Site-Directed Spin Labeling for Mapping Molecular Flexibility in Proteins

29

Michael T. Lerch, Zhongyu Yang, Christian Altenbach, and Wayne L. Hubbell

1. Introduction

30

2. Variable-Pressure CW EPR

37

3. Pressure-Resolved DEER

42

4. Example Applications and Perspectives

44

5. Summary and Future Directions

52

References

53

3. Exploring Structure, Dynamics, and Topology of Nitroxide Spin-Labeled Proteins Using Continuous-Wave Electron Paramagnetic Resonance Spectroscopy

59

Christian Altenbach, Carlos J. López, Kálmán Hideg, and Wayne L. Hubbell

1. Introduction

60

2. Site-Directed Spin Labeling

62

3. Analysis of EPR Spectra in Terms of R1 Nitroxide Motion

63

4. Measurement of R1 Solvent Accessibility With Power Saturation

68

5. CW-Based Interspin Distance Measurements

72

6. Determination of Secondary Structure and Features of the Tertiary Fold from R1 Mobility and Accessibility	80
7. Backbone Dynamics	85
8. Identifying Slow Conformational Exchange and Detecting Conformational Changes	90
9. Other Applications of CW EPR	93
10. Conclusion and Future Directions	94
References	95
4. Bifunctional Spin Labeling of Muscle Proteins: Accurate Rotational Dynamics, Orientation, and Distance by EPR	101
Andrew R. Thompson, Benjamin P. Binder, Jesse E. McCaffrey, Bengt Svensson, and David D. Thomas	
1. Introduction	102
2. Methods of BSL Labeling	104
3. Rotational Dynamics	105
4. Orientation	108
5. Distance	113
6. Discussion	116
References	120
5. EPR Distance Measurements in Deuterated Proteins	125
Hassane El Mkami and David G. Norman	
1. Introduction and Overview	126
2. Deuteration	143
3. The Pulse EPR Experiment	145
4. Data Analysis	147
5. Concluding Remarks	149
Acknowledgments	150
References	150
6. Spin labeling and Double Electron-Electron Resonance (DEER) to Deconstruct Conformational Ensembles of HIV Protease	153
Thomas M. Casey and Gail E. Fanucci	
1. Perspective—Conformational Sampling of HIV-1 Protease	154
2. Site-Directed Spin-Labeling Electron Paramagnetic Resonance Spectroscopy	156
3. DEER Distance Profiles Reflect the Fractional Occupancies of HIV-1PR Conformational States	165
4. "DEERconstruct," a Tool for Statistical Analysis of DEER Distance Profiles	170
References	183

Section II

Spin Labeling Studies of Membrane and Membrane-Associated Proteins

7. Ionizable Nitroxides for Studying Local Electrostatic Properties of Lipid Bilayers and Protein Systems by EPR	191
Maxim A. Voinov and Alex I. Smirnov	
1. Introduction	192
2. EPR Characterization of pH-Sensitive Thiol-Specific Nitroxide Labels for Mapping Local Protein Electrostatics	196
3. pH-Sensitive Spin-Labeled Lipids for Measuring Surface Electrostatics of Lipid Bilayers by EPR	202
4. Conclusions and Outlook	211
Acknowledgments	212
References	213
8. Peptide-Membrane Interactions by Spin-Labeling EPR	219
Tatyana I. Smirnova and Alex I. Smirnov	
1. Introduction	220
2. Peptide Labeling with EPR Active Probes and Preparation of Membrane Mimetic Systems	221
3. EPR Measurements of Membrane Peptide Binding	227
4. Analysis of Binding Isotherms	233
5. Topology of Membrane-Associated Peptides: Paramagnetic Relaxers Accessibility EPR Experiments	236
6. Detecting Membrane-Induced Aggregation and Agglomeration of Peptides	242
7. Conclusions and Outlook	250
Acknowledgments	251
References	251
9. Structural Characterization of Membrane-Curving Proteins: Site-Directed Spin Labeling, EPR, and Computational Refinement	259
Mark R. Ambroso, Ian S. Haworth, and Ralf Langen	
1. Introduction	260
2. SDSL, EPR, and Computational Refinement Are a Powerful Combination for Studying Membrane-Curving Proteins Bound to Membranes of Defined Curvature	261
3. Sample Preparation Methodology for SDSL	263
4. EPR Measurements	270
5. Computational Refinement	277

6. Outlook	284
Acknowledgment	285
References	285
10. Determining the Secondary Structure of Membrane Proteins and Peptides Via Electron Spin Echo Envelope Modulation (ESEEM) Spectroscopy	289
Lishan Liu, Daniel J. Mayo, Indra D. Sahu, Andy Zhou, Rongfu Zhang, Robert M. McCarrick, and Gary A. Lorigan	
1. Introduction	290
2. Integration of Membrane Peptides into Lipid Bilayer	294
3. ESEEM Spectroscopy on Model Peptides in a Lipid Bilayer	298
4. Development of ESEEM Secondary Structure Determination Approach	302
5. Summary and Future Direction	308
Acknowledgments	308
References	309
11. Spin Labeling Studies of Transmembrane Signaling and Transport: Applications to Phototaxis, ABC Transporters and Symporters	315
Johann P. Klare and Heinz-Jürgen Steinhoff	
1. Introduction	316
2. Applications to Membrane Proteins	322
3. Outlook	340
Acknowledgments	341
References	341
12. Navigating Membrane Protein Structure, Dynamics, and Energy Landscapes Using Spin Labeling and EPR Spectroscopy	349
Derek P. Claxton, Kelli Kazmier, Smriti Mishra, and Hassane S. Mchaourab	
1. Introduction	350
2. An EPR Primer	354
3. Principles of DEER Spectroscopy to Uncover Conformational Dynamics	361
4. Practical Considerations in Sample Preparation	372
5. Perspective	379
Acknowledgments	381
References	381
13. Spin Labeling of Potassium Channels	389
Dylan Burdette and Adrian Gross	
1. Introduction	390
2. General Considerations for Spin Labeling Studies of Potassium Channels	391

3. Examples of Labeling Methods	395
References	399

Section III

Spin Labeling Studies of Nucleic Acids

14. Advanced EPR Methods for Studying Conformational Dynamics of Nucleic Acids	403
---	------------

B. Endeward, A. Marko, V.P. Denysenkov, S.Th. Sigurdsson, and T.F. Prisner	
1. Introduction	404
2. Spin Labels	407
3. Theory for Orientation-Selective PELDOR	408
4. Experimental Procedure for Multifrequency/Multifield PELDOR	410
5. Analysis of Multifrequency/Multifield PELDOR Data	415
6. Summary and Outlook	418
Acknowledgments	421
References	421

15. An Integrated Spin-Labeling/Computational-Modeling Approach for Mapping Global Structures of Nucleic Acids	427
---	------------

Narin S. Tangprasertchai, Xiaojun Zhang, Yuan Ding, Kenneth Tham, Remo Rohs, Ian S. Haworth, and Peter Z. Qin	
1. Introduction	428
2. SDSL of Nucleic Acids Using a Nucleotide-Independent Nitroxide Probe	431
3. Measuring Inter-R5 Distances Using Double Electron-Electron Resonance Spectroscopy	439
4. Integration of DEER-Measured Distances with Computational Modeling	443
5. Conclusions	449
Acknowledgment	450
References	450

Section IV

EPR-NMR Methods and Applications

16. Overhauser Dynamic Nuclear Polarization Studies on Local Water Dynamics	457
--	------------

Ilia Kaminker, Ryan Barnes, and Songi Han	
1. Introduction	458
2. Theory	461
3. Hardware	469

4. Data Acquisition	472
5. Data Analysis	475
6. Examples of ODNP	477
7. Summary	479
Acknowledgments	479
References	479
17. Practical Aspects of Paramagnetic Relaxation Enhancement in Biological Macromolecules	485
G. Marius Clore	
1. Introduction	485
2. Paramagnetic Labels for PRE Measurements	487
3. Measurement of the PRE	487
4. Using the PRE in Structure Determination	489
5. Using the PRE to Detect Transient Sparsely Populated States	490
Acknowledgments	495
References	495
Section V	
<i>In Vivo</i> EPR Oximetry and Imaging	
18. <i>In Vivo</i> pO₂ Imaging of Tumors: Oximetry with Very Low-Frequency Electron Paramagnetic Resonance	501
Boris Epel and Howard J. Halpern	
1. Introduction: The Importance of Imaging Molecular Oxygen in Cancer Therapy	502
2. Summary	521
Acknowledgments	522
References	522
19. Direct and Repeated Measurement of Heart and Brain Oxygenation Using <i>In Vivo</i> EPR Oximetry	529
Nadeem Khan, Huagang Hou, Harold M. Swartz, and Periannan Kuppusamy	
1. Introduction	530
2. Principles of EPR Oximetry	532
3. Paramagnetic Oxygen-Sensitive Probes for pO ₂ Measurements by EPR	535
4. Application of EPR Oximetry in Ischemic Pathologies	540
5. Summary	546
Acknowledgments	546
References	547

20. Free Radical Imaging Using <i>In Vivo</i> Dynamic Nuclear Polarization-MRI	553
Hideo Utsumi and Fuminori Hyodo	
1. Introduction	554
2. Principle of DNP	556
3. Apparatus	558
4. Spin-Probe Technique for DNP-MRI	562
5. Application of DNP-MRI to the Intrinsic Molecular Imaging	566
6. Conclusion	568
Acknowledgments	568
References	568
Author Index	573
Subject Index	603

Michael Bridges

Department of Chemistry, University of California, Los Angeles, California, Los Angeles, California, USA

Dylan Burdette

Department of Biochemistry, University of Texas at Austin, Austin, Texas, USA

Thomas M. Casey

Department of Chemistry, University of Illinois, Urbana, Illinois, USA

Derek P. Clifton

Department of Molecular Biology and Pharmacology, Harvard Medical School, Boston, Massachusetts, USA

G. Marius Clive

Laboratory of Clinical Research, National Institute of Diabetes and Digestive and Kidney Diseases, National Institutes of Health, Bethesda, Maryland, USA

V.P. Denisov

Institute of Physics and Chemistry, Russian Academy of Sciences, Moscow, Russia

Yan Ding

Department of Chemistry, University of Illinois, Urbana, Illinois, USA

Hassan El Mawla

School of Physics and Astronomy, University of Illinois, Urbana, Illinois, USA

B. Endeward

Institute of Physical and Chemical Research, and Graduate School of Science and Technology, Kyoto University, Kyoto, Japan
