Preface

xix

1. Next-Generation AUC Adds a Spectral Dimension: Development of Multiwavelength Detectors for the Analytical Ultracentrifuge 1

Joseph Z. Pearson, Frank Krause, Dirk Haffke, Borries Demeler,
Kristian Schilling, and Helmut Cölfen

1. Introduction	2
2. Development of MWL Absorbance Detectors	4
3. Hardware and Control System of Second-Generation MWL Detectors	6
4. MWL Data From AUC	11
5. Data Visualization and Experimental Results	12
6. Discussion	20
7. Summary and General Discussion of the Impacts of MWL AUC Data in the Field of Biopolymers	24
Acknowledgments	25
Supplemental Information	25
References	25

2. Next-Generation AUC: Analysis of Multiwavelength Analytical Ultracentrifugation Data 27

Gary E. Gorbet, Joseph Z. Pearson, Aysha K. Demeler, Helmut Cölfen,
and Borries Demeler

1. Introduction	28
2. Computational Treatment of Multiwavelength Data	29
3. Applications	40
4. Discussion	42
5. Conclusion	45
Acknowledgments	46
References	46

3. Sedimentation Velocity: A Classical Perspective 49

John J. Correia and Walter F. Stafford

1. Early History	50
2. Irreversible Thermodynamics	52

3. Sedimentation Velocity	53
4. Balanced Forces in Diffusion	54
5. Balanced Forces in Sedimentation	56
6. Derivation of the Lamm Equation	58
7. Heterogeneous Paucidisperse Systems	58
8. Nonideal Systems	60
9. Interacting Systems	63
10. Solutions of the Lamm Equation	65
11. Equipment and Optical Systems	67
12. Sedimentation Velocity Experimental Design	69
Acknowledgments	74
References	74
4. Hydrodynamic Modeling and Its Application in AUC	81
Mattia Rocco and Olwyn Byron	
1. Introduction	82
2. AUC and Hydrodynamics	83
3. The Hydration Issue	86
4. Segmental Flexibility and Intrinsically Disordered Structures	88
5. Available Programs for Rigid Body HM	89
6. Comparing the Performance of Various Methods	96
7. A Step-by-Step Guide to Performing Correct HM Using Atomic Coordinates	98
8. Selected Literature Examples	100
9. Concluding Remarks	103
References	103
5. Calculations and Publication-Quality Illustrations for Analytical Ultracentrifugation Data	109
Chad A. Brautigam	
1. Introduction	110
2. General Features of GUSI	111
3. Utility Functions of GUSI	116
4. Summary	130
Acknowledgments	130
References	130
6. Sedimentation Equilibrium Analysis of ClpB Self-Association in Diluted and Crowded Solutions	135
Carlos Alfonso, Urko del Castillo, Ianire Martín, Arturo Muga, and Germán Rivas	
1. Introduction	136

2. Experimental Approaches and Analysis	139
3. Summary of Experimental Results	148
4. ClpB Association Equilibrium and Disaggregase Activity	156
5. Concluding Remarks	157
Acknowledgments	158
References	158

7. Analysis of Linked Equilibria 161

JiaBei Lin and Aaron L. Lucius

1. Introduction	161
2. Determination of $L_{n,0}$ for an Assembling System	168
3. Global Fitting of Sedimentation Velocity Data as a Function of Protein Concentration Kinetic Considerations	169
4. Global Analysis Using the 1-2-4-6 Model with Rapid Dissociating Oligomers	175
5. Global Analysis Using the 1-2-4-6 Model with Slow Dissociation of Oligomers	180
6. Global Analysis with Rate Constants in the Detectable Range	181
7. Conclusions	183
References	185

8. Elucidating Complicated Assembling Systems in Biology Using Size-and-Shape Analysis of Sedimentation Velocity Data 187

Catherine T. Chaton and Andrew B. Herr

1. Techniques for Studying Macromolecular Mixtures	188
2. An Overview of the Standard Sedimentation Coefficient Distribution Approach	190
3. Two-Dimensional Size-and-Shape Analysis	194
4. Case Study: Cyclic GMP-AMP Synthase Oligomerization	196
5. Case Study: IRF-3 Phosphorylation by TBK-1	199
6. Conclusions	201
Acknowledgments	202
References	202

9. Quaternary Structure Analyses of an Essential Oligomeric Enzyme 205

Tatiana P. Soares da Costa, Janni B. Christensen, Sebastien Desbois,
Shane E. Gordon, Ruchi Gupta, Campbell J. Hogan, Tao G. Nelson,
Matthew T. Downton, Chamodi K. Gardhi, Belinda M. Abbott, John Wagner,
Santosh Panjekar, and Matthew A. Perugini

1. Introduction	206
2. Catalytic Function of DHDPs	207

3. Structure of DHDPS	208
4. Conclusions	220
References	222
10. Characterization of Intrinsically Disordered Proteins by Analytical Ultracentrifugation	225
David J. Scott and Donald J. Winzor	
1. Introduction	226
2. Ultracentrifugal Procedures	226
3. Extent of Structural Information Obtained	233
4. Concluding Remarks	237
References	238
11. Sedimentation Velocity Analysis of the Size Distribution of Amyloid Oligomers and Fibrils	241
Yee-Foong Mok, Geoffrey J. Howlett, and Michael D.W. Griffin	
1. Introduction	242
2. Preparative Ultracentrifugation	243
3. Analytical Ultracentrifugation	246
4. Heterogeneous Systems	251
5. Summary	254
Acknowledgments	254
References	254
12. AUC and Small-Angle Scattering for Membrane Proteins	257
Aline Le Roy, Kai Wang, Béatrice Schaack, Peter Schuck, Cécile Breyton, and Christine Ebel	
1. Introduction	258
2. Membrane Proteins in AUC	260
3. Membrane Proteins in SAXS and SANS	274
Acknowledgments	283
References	283
13. Hydrodynamic Models of G-Quadruplex Structures	287
Jonathan B. Chaires, William L. Dean, Huy T. Le, and John O. Trent	
1. Introduction	288
2. Correlating Molecular Structure with Experimental Solution Hydrodynamic Measurements—General Comments	290
3. HYDROPRO Software	291
4. Getting Structure Files and Building Models	291

5. Software for Model Building	291
6. Protocol for Running HYDROPRO on Quadruplex Nucleic Acid Structure Files	292
7. Extending the Static Hydrodynamic Bead Model By Analyzing Molecular Dynamics Trajectories	294
8. Accelerated Molecular Dynamics Can Explore More Conformational Space	295
9. Examining Higher Order Quadruplexes from the Human Telomere Sequence	297
10. Experimental Determination by Analytical Ultracentrifugation	298
11. The Partial Specific Volume Problem	300
12. Correlation of Calculated and Measured Hydrodynamic Properties	301
References	302
14. Analytical Ultracentrifugation as a Tool to Study Nonspecific Protein-DNA Interactions	305
Teng-Chieh Yang, Carlos Enrique Catalano, and Nasib Karl Maluf	
1. Introduction	306
2. Nonspecific Interaction Model	307
3. Case Studies	314
4. Summary	328
Acknowledgments	328
References	329
15. Characterization of Homogeneous, Cooperative Protein-DNA Clusters by Sedimentation Equilibrium Analytical Ultracentrifugation and Atomic Force Microscopy	331
Ingrid Tessmer and Michael G. Fried	
1. Introduction	332
2. Measurement of DNA Binding	334
3. AFM Tests of the HBC Model	338
Acknowledgments	345
References	345
16. Sedimentation Velocity Analysis of Large Oligomeric Chromatin Complexes Using Interference Detection	349
Ryan A. Rogge and Jeffrey C. Hansen	
1. Introduction	350
2. Theory	350
3. Equipments	352
4. Setting Up the Interferometer Laser: Laser Delay and Duration	352

5. Radial Calibration of Interference Detector	353
6. Final Considerations for Interference Sedimentation Velocity Run	353
7. Experimental	354
8. Data Analysis	357
9. Discussion	358
References	360
17. Dissecting Steroid Receptor Function by Analytical Ultracentrifugation	363
David L. Bain, Rolando W. De Angelis, Keith D. Connaghan, Qin Yang, Gregory D. Degala, and James R. Lambert	
1. Introduction	364
2. AUC Analysis of Steroid Receptor Self-Assembly	366
3. Integrating AUC Results into Understanding Receptor–Promoter Interactions	374
4. Implications for Receptor-Mediated Transcriptional Regulation	383
5. Conclusions and Future Directions	386
Acknowledgments	386
References	387
18. Ultracentrifuge Methods for the Analysis of Polysaccharides, Glycoconjugates, and Lignins	391
Stephen E. Harding, Gary G. Adams, Fahad Almutairi, Qushmua Alzahrani, Tayyibe Erten, M. Samil Kök, and Richard B. Gillis	
1. Introduction	392
2. Polysaccharides	394
3. Glycoconjugates	396
4. Lignins	396
5. Relevant Recent Advances in AUC and Related Procedures	397
6. Examples of Applications to Specific Carbohydrate Systems	411
7. Analytical Ultracentrifuge Analysis of Interactions Involving Carbohydrate Polymers	412
8. Conclusions	427
References	428
19. Analytical Ultracentrifugation and Its Role in Development and Research of Therapeutic Proteins	441
Jun Liu, Sandeep Yadav, James Andya, Barthélemy Demeule, and Steven J. Shire	
1. The Development of Analytical Ultracentrifugation and Its Role in Biology and Biotechnology	442

2. Analysis of Aggregates by AUC	444
3. Early Studies of the Use of AUC in Determining Molecular Weight and Size Distribution of Protein Drugs	447
4. AUC and Formulation Development	455
5. Using AUC to Characterize Immune Complexes	456
6. Assessment of Dosing of Anti-IgE by AUC Competitive Binding Experiments	459
7. Using the Competitive Binding AUC Method to Critically Evaluate SPR Measurements	463
8. Investigation of Protein-Protein Interactions and Impact on Viscosity	466
9. Summary and Conclusions	471
References	472
20. Guidance to Achieve Accurate Aggregate Quantitation in Biopharmaceuticals by SV-AUC	477
Kelly K. Arthur, Brent S. Kendrick, and John P. Gabrielson	
1. Introduction	478
2. Applications of SV-AUC	479
3. Optimizing SV-AUC Method Parameters and Applying Real-Time Controls	483
4. Method Lifecycle Maintenance: Monitoring and Controlling SV-AUC Method Performance Over Time	487
5. Conclusions	499
References	499
21. Protein Assembly in Serum and the Differences from Assembly in Buffer	501
John J. Hill and Thomas M. Laue	
1. Introduction	502
2. Materials and Methods	504
3. Results	509
4. Conclusions	523
Acknowledgments	525
References	525
Author Index	529
Subject Index	553
