## 1. Mammalian Olfactory Receptors: Molecular Mechanisms of Odorant Detection, 3D-Modeling, and Structure-Activity Relationships

1

Marie-Annick Persuy, Guenhaël Sanz, Anne Tromelin,

Thierry Thomas-Danguin, Jean-François Gibrat, and Edith Pajot-Augy

- |                                                                                                   |    |
|---------------------------------------------------------------------------------------------------|----|
| 1. Mammalian Olfactory Receptors: From Genes to Proteins                                          | 2  |
| 2. Olfactory Receptor Activity Regulation: Homodimerization, Binding Cooperativity, and Allostery | 9  |
| 3. Olfactory Receptor 3D Modeling and Use for Virtual Screening                                   | 12 |
| 4. Odorant Ligands Structure-Activity Relationships                                               | 23 |
| References                                                                                        | 25 |

## 2. Olfactory Signaling in Insects

37

Dieter Wicher

- |                               |    |
|-------------------------------|----|
| 1. Introduction               | 38 |
| 2. Insect Olfactory Receptors | 40 |
| 3. Role of Orco               | 49 |
| 4. Final Remarks              | 50 |
| Acknowledgments               | 50 |
| References                    | 51 |

## 3. Advances in the Identification and Characterization of Olfactory Receptors in Insects

55

Nicolas Montagné, Arthur de Fouchier, Richard D. Newcomb,  
and Emmanuelle Jacquin-Joly

- |                                                                                                                   |    |
|-------------------------------------------------------------------------------------------------------------------|----|
| 1. Introduction: The Molecular Bases of Odor Detection in Insects                                                 | 56 |
| 2. Identification of Complete Insect OR Repertoires Could Only Be Achieved by Genome and Transcriptome Sequencing | 58 |
| 3. Toward the Development of High Throughput Methods for the Functional Characterization of Insect ORs            | 67 |
| 4. Conclusion                                                                                                     | 73 |
| References                                                                                                        | 73 |
