Section I

Labeling in Prokarya

1. Robust High-Yield Methodologies for ^2H and $^2\text{H}/^{15}\text{N}/^{13}\text{C}$ Labeling of Proteins for Structural Investigations Using Neutron Scattering and NMR 3

Anthony P. Duff, Karyn L. Wilde, Agata Rekas, Vanessa Lake, and Peter J. Holden

1. Introduction 4
2. Media Preparation 7
3. Unlabeled Protein Production 9
4. Deuterated Protein Production 14
5. Multiple Labeling of Proteins for NMR 17
6. Comments on the Method 18
7. Typical Deuteration Levels 22
- Acknowledgments 23
- References 23

2. Protein Labeling in *Escherichia coli* with ^2H , ^{13}C , and ^{15}N 27

J. Todd Hoopes, Margaret A. Elbertson, Renae J. Preston, Prasad T. Reddy, and Zvi Kelman

1. Introduction 28
2. Selection of Induction Method 29
3. Special Considerations When Labeling with Deuterium 30
4. Plasmid and *E. coli* Strain Selection 30
5. Determination of Isotope Incorporation 32
6. Acclimation of *E. coli* to Growth in D_2O 35
7. Media Preparation 36
8. Protein Expression 40
- Acknowledgments 43
- References 43

3. <i>Escherichia coli</i> Auxotroph Host Strains for Amino Acid-Selective Isotope Labeling of Recombinant Proteins	45
Myat T. Lin, Risako Fukazawa, Yoshiharu Miyajima-Nakano, Shinichi Matsushita, Sylvia K. Choi, Toshio Iwasaki, and Robert B. Gennis	
1. Introduction	46
2. <i>E. coli</i> Auxotrophs for Amino Acid-Selective Isotope Labeling	47
3. Methods	53
4. Conclusions	64
Acknowledgments	65
References	65
4. ^{19}F-Modified Proteins and ^{19}F-Containing Ligands as Tools in Solution NMR Studies of Protein Interactions	67
Naima G. Sharaf and Angela M. Gronenborn	
1. Introduction	68
2. Protocol 1: Biosynthetic Amino Acid Type-Specific Incorporation of ^{19}F -Modified Aromatic Amino Acids	73
3. Protocol 2: Site-Specific Incorporation of Fluorinated Amino Acids Using a Recombinantly Expressed Orthogonal Amber tRNA/tRNA Synthetase Pair in <i>E. coli</i>	79
4. General Considerations for ^{19}F -Observe NMR Experiments	84
5. ^{19}F -Modified Protein-Observe NMR Experiments	86
6. NMR Experiments with ^{19}F -Containing Ligands	89
Acknowledgments	91
References	92
5. Biopolymer Deuteration for Neutron Scattering and Other Isotope-Sensitive Techniques	97
Robert A. Russell, Christopher J. Garvey, Tamim A. Darwish, L. John R. Foster, and Peter J. Holden	
1. Introduction	98
2. Deuterated Biopolyesters	100
3. Deuterated Chitosan	106
4. Deuterated Cellulose	111
Acknowledgments	117
References	118

6. Production of Bacterial Cellulose with Controlled Deuterium-Hydrogen Substitution for Neutron Scattering Studies	123
Hugh O'Neill, Riddhi Shah, Barbara R. Evans, Junhong He, Sai Venkatesh Pingali, Shishir P. S. Chundawat, A. Daniel Jones, Paul Langan, Brian H. Davison, and Volker Urban	
1. Introduction	124
2. The Occurrence and Properties of Cellulose	127
3. Deuteration of Bacterial Cellulose	129
4. Characterization of Deuterated Cellulose	133
Acknowledgments	142
References	142
7. Isotopic Labeling of Proteins in <i>Halobacterium salinarum</i>	147
Thomas E. Cleveland IV and Zvi Kelman	
1. Introduction	148
2. Growth and Maintenance of <i>Halobacterium salinarum</i>	149
3. Purification of Proteins from <i>Halobacterium salinarum</i>	153
4. Summary	163
Acknowledgments	164
References	164
8. Amino Acid Selective Unlabeling in Protein NMR Spectroscopy	167
Chinmayi Prasanna, Abhinav Dubey, and Hanudatta S. Atreya	
1. Introduction	168
2. Method Description	171
3. Applications of Selective Unlabeling	182
4. Conclusions	186
Acknowledgments	187
References	187

Section II

Labeling in Eukarya

9. Isotope Labeling of Eukaryotic Membrane Proteins in Yeast for Solid-State NMR	193
Ying Fan, Sanaz Emami, Rachel Munro, Vladimir Ladizhansky, and Leonid S. Brown	
1. Introduction	194
2. Expression and Isotope Labeling in <i>P. pastoris</i> : Background	196

3. Isotope Labeling of Membrane Proteins in <i>P. pastoris</i>	197
4. Outlook	207
Acknowledgments	207
References	207
10. Development of Approaches for Deuterium Incorporation in Plants	213
Barbara R. Evans and Riddhi Shah	
1. Introduction	214
2. Challenges of Plant Cultivation in D ₂ O	215
3. Analysis of Deuterium-Labeled Plant Biomass	220
4. Deuterium Labeling of Plants for Metabolic Studies	223
5. Production of Deuterated Plants for Structural Studies	225
Acknowledgments	239
References	239
11. Isotope Labeling of Proteins in Insect Cells	245
Lukasz Skora, Binesh Shrestha, and Alvar D. Gossert	
1. Insect Cells as Expression System	246
2. General Considerations for Isotope Labeling in Insect Cells	250
3. Amino Acid Type-Specific Isotope Labeling in Insect Cells	252
4. Uniform Isotope Labeling in Insect Cells	256
5. Applications	268
6. Protocols	274
References	284
12. Effective Isotope Labeling of Proteins in a Mammalian Expression System	289
Mallika Sastry, Carole A. Bewley, and Peter D. Kwong	
1. Introduction	290
2. Overview of Mammalian Expression	291
3. Protein Expression	299
4. NMR Characterization of Expressed Protein	300
5. Conclusions	302
6. Materials	303
Acknowledgments	303
References	303

Section III

***In Vitro* Labeling**

13. <i>Escherichia coli</i> Cell-Free Protein Synthesis and Isotope Labeling of Mammalian Proteins	311
Takaho Terada and Shigeyuki Yokoyama	
1. Introduction	312
2. The <i>E. coli</i> Cell-Free Protein Synthesis Method	316
3. Stable Isotope Labeling of Proteins	323
Acknowledgments	339
References	340
14. Rapid Biosynthesis of Stable Isotope-Labeled Peptides from a Reconstituted <i>In Vitro</i> Translation System for Targeted Proteomics	347
Feng Xian, Shuwei Li, and Siqi Liu	
1. Introduction	348
2. Equipment, Materials, and Buffers	350
3. Section 1: DNA Template Preparation	351
4. Section 2: Peptide Synthesis with PURE System	355
5. Section 3: Enrichment and Digestion of Synthesized Peptide	358
6. Section 4: Quantification of PURE-Synthesized Peptide	360
7. An Example	363
8. Summary and Discussion	365
Acknowledgment	365
References	365
15. Labeling of Membrane Proteins by Cell-Free Expression	367
Aisha LaGuerre, Frank Löhr, Frank Bernhard, and Volker Dötsch	
1. Introduction	368
2. Core Considerations for the Cell-Free Generation of MP Samples	369
3. Specific Challenges of NMR Studies with MPs	372
4. An Emerging Perspective: NMR with NDs	374
5. Labeling of Cell-Free Synthesized MPs with Stable Isotopes	375
6. Reducing Scrambling Problems	376
7. Perdeuteration of Cell-Free Synthesized MPs	380
8. Conclusion	382
Acknowledgments	382
References	382

16. Selective Amino Acid Segmental Labeling of Multi-Domain Proteins	389
Erich Michel and Frédéric H.-T. Allain	
1. Introduction	390
2. Methods	396
3. Conclusion	417
Acknowledgments	419
References	419
17. Labeling Monosaccharides With Stable Isotopes	423
Wenhui Zhang, Shikai Zhao, and Anthony S. Serianni	
1. Introduction	424
2. Terminology to Describe Different Monosaccharide Isotopomers	425
3. Introducing ^{13}C into Monosaccharides	427
4. Multiple Labeling of Aldoses Via Chain Inversion	438
5. Labeling at the Internal Carbons of Aldoses	439
6. Extension to Biologically Important Aldoses	442
7. Relative Carbonyl Reactivities in Osoes—Synthesis of Labeled 2-Ketoses	444
8. Manipulation of Three-Carbon Building Blocks in Enzyme-Mediated Aldol Condensation	445
9. Manipulation of Isotopically Labeled D-Fructose 17 and L-Sorbose 25	452
10. Concluding Remarks	452
References	455
Section IV	
RNA Labeling	
18. Stable Isotope-Labeled RNA Phosphoramidites to Facilitate Dynamics by NMR	461
Christoph H. Wunderlich, Michael A. Juen, Regan M. LeBlanc, Andrew P. Longhini, T. Kwaku Dayie, and Christoph Kreutz	
1. Theory	462
2. Equipment	463
3. Materials	464
4. Protocol	467
5. Step 1: Synthesis of 6- ^{13}C -Uridine TOM Phosphoramidite	468
6. Step 2: Synthesis of 6- ^{13}C -Cytidine TOM Phosphoramidite	473
7. Step 3: Chemical RNA Synthesis	477
8. Step 4: Applications	484
9. Conclusions	490
Acknowledgments	491
References	492

19. In Vivo, Large-Scale Preparation of Uniformly ^{15}N- and Site-Specifically ^{13}C-Labeled Homogeneous, Recombinant RNA for NMR Studies	495
My T. Le, Rachel E. Brown, Anne E. Simon, and T. Kwaku Dayie	
1. Theory	497
2. Equipment	499
3. Materials	502
4. Protocol	510
5. Step 1: Pilot of the Expression of the Recombinant tRNA-Scaffold Plasmid in Wild-Type K12 <i>E. coli</i>	512
6. Step 2: Double Selection of High-Expressing <i>E. coli</i> Clones	514
7. Step 3: Large-Scale Expression in Labeled SPG Minimal Media	517
8. Step 4: Total Cellular RNA Extraction	518
9. Step 5a: Purification of the Recombinant tRNA-Scaffold Using Anion-Exchange Chromatography	520
10. Step 5b: Purification of the Recombinant tRNA-Scaffold Using Affinity Chromatography	523
11. Step 6: Excision and Purification of the RNA of Interest	524
12. Step 7: NMR Applications	527
13. Conclusion	530
Acknowledgments	532
References	532
20. Cut and Paste RNA for Nuclear Magnetic Resonance, Paramagnetic Resonance Enhancement, and Electron Paramagnetic Resonance Structural Studies	537
Olivier Duss, Nana Diarra dit Konté, and Frédéric H.-T. Allain	
1. Introduction	538
2. Cut and Paste RNA Approach	540
3. Production of Small (<10 nts) Isotopically Labeled RNAs	546
4. Protocol A: Production of Small Spin-Labeled RNA Fragments	552
5. Protocol B: Production of Unlabeled and Isotopically Labeled RNA Fragments	554
6. Protocol C: Ligation	557
7. Summary and Outlook	559
Acknowledgments	560
References	561
<i>Author Index</i>	563
<i>Subject Index</i>	595
