About the Author

Preface

Acknowledgments

1. Introduction to Animal Viruses

What Is a Virus?

Diversity in the World of Viruses

Are Viruses Alive?

Basic Steps in the Virus Replication-Cycle

Growing Viruses

Categorizing Viruses (Taxonomy)

Outcomes of Viral Infection

Introduction to Viral Pathogenesis

Introduction to Virus Transmission

2. Virus Structure

Anatomy of a Virus

Capsid Structure and Function

Capsids Are Built From Many Copies of One or
a Few Types of Protein

Simple Icosahedral Capsids

Larger Icosahedral Capsids

Viral Envelopes

Other Membrane Proteins

Matrix Proteins

Nucleocapsid Structure

3. Virus Interactions With the Cell

Virus Interactions with the Cell

Cytoskeleton

Virus Assembly

Virion Release

Virion Maturation

Amplification of Viral Proteins and Nucleic Acids
in the Context of the Infected Cell

4. Methods to Study Viruses

Growing Viruses

Purifying Viruses

Visualizing Viruses

Counting Viruses

Basic Principles of Diagnostic Virology

References

5. Virus Transmission and Epidemiology

Methods to Count Viral Infections and Disease

ix	Infection Versus Disease	55
xi	Developing Models of Virus Transmission	56
xiii	Incubation, Latent, and Infectious Periods	56
	Virus Transmission	56

6. Immunity and Resistance to Viruses

1	Innate Immunity	62
2	Intrinsic Immunity	66
3	Specific Immunity	67
5	Viruses Fight Back	68

7. Viral Vaccines

10	Classical versus Engineered Vaccines	73
10	Vaccines Provide a Source of Antigens	75
	Replicating versus Inactivated Vaccines	75
	Killed, Inactivated, and Subunit Vaccines	75
13	Viral Vaccines that contain Infectious Agents	76
14	Antigen Recognition	76
	Correlates of Protection	77
14	Vaccine Development	78
15	A Final Word about Safety	78

8. Virus Evolution and Genetics

19	Virus Evolution	81
20	Virus Genetics	84

9. Viral Pathogenesis

23	Natural Barriers to Infection	88
27	Primary Replication	88
28	Movement to Secondary Replication Sites	88
28	Genesis of Disease	90
29	Immunopathogenesis	91
	Virulence	92
29	Approaches to Study Viral Pathogenesis	94

10. Introduction to RNA Viruses

37	Definition and Basic Properties of RNA Viruses	97
38	Subgroups of RNA Viruses	98
39	Structural Features of RNA Virus Genomes	100
41	Priming Viral RNA Synthesis	102
49	Mechanisms to Generate Capped mRNAs	102
52	Mechanisms to Generate Polyadenylated mRNAs	103
	Mechanisms to Regulate Synthesis of Genomes and Transcripts	103
	RNA Viruses and Quasispecies	103
54	References	105

11. Family Picornaviridae		19. Family Rhabdoviridae	
Genome Organization	107	Genome Organization	167
Virion Structure	109	Virus Structure	167
Picornavirus Replication (Poliovirus Model)	109	Overview of Replication	167
Picornaviruses and Disease	111	Diseases	169
12. Family Caliciviridae		20. Families Paramyxoviridae and Pneumoviridae	
Genome Organization	115	Genome Structure/Organization	173
Virion Structure	116	Virion Structure	175
General Replication Cycle	117	Overview of Replication	176
Diseases	118	Diseases	179
13. Family Hepeviridae		21. Family Filoviridae	
Genome Organization	121	Genome Organization	183
Virion Morphology	121	Virion Structure	185
General Replication Cycle of HEV	121	Overview of Replication	185
Disease	123	Disease	187
14. Family Astroviridae		22. Family Bornaviridae	
Genome Organization	125	Genome Organization	191
Virion Morphology	125	Virion Structure	193
Diseases Caused by Astroviruses	127	Overview of Replication	193
References	128	Diseases	194
15. Family Flaviviridae		23. Family Orthomyxoviridae	
Genome Structure/Organization	130	Genome Structure/Organization	198
Virion Structure	131	Virion Structure	199
General Overview of Replication	131	Classification and Nomenclature of Orthomyxoviruses	199
Protein Products	133	Overview of Replication	201
Diseases	133	Antigenic Drift and Antigenic Shift	205
References	139	Disease	206
16. Family Togaviridae		Antiviral Drugs	207
Genome Structure	141	Vaccines	208
Virion Structure	142	References	208
Togavirus Replication	142	24. Family Bunyaviridae	
Transmission	146	Genome Organization	209
Alphaviruses Associated With Rash and Arthritis	146	Virion Structure	210
Alphaviruses of Veterinary Importance	146	General Replication Strategy	211
References	148	Diseases	212
17. Family Coronaviridae		25. Family Arenaviridae	
Coronavirus Genome Organization	150	Genome Organization	215
Virion Structure	152	Virion Structure	215
Coronavirus Structural Proteins	153	Overview of Replication	216
Coronavirus Replication Cycle	154	Diseases Caused by Arenaviruses	217
Diseases Caused by Coronaviruses	157	26. Family Reoviridae	
References	158	Genome Organization	219
18. Family Arteriviridae		Virus Structure	221
Genome Organization	159	Overview of Replication	221
Virion Structure	160	Diseases	225
Replication Cycle	160		
Diseases Caused by Arteriviruses	160		
References	163		

27. Family *Birnaviridae*

Genome Structure
 Virion Structure
 Replication Cycle
 Disease

28. Introduction to DNA Viruses

Definition and Basic Properties of DNA Viruses
 Viral DNA Replication
 DNA Viruses and Cell Cycle
 Oncogenesis

29. Family *Parvoviridae*

Genome Organization
 Virion Structure
 Overview of Replication
 Diseases

30. Other Small DNA Viruses

Family *Circoviridae*
 Diseases
 Family *Anelloviridae*
 References

31. Family *Polyomaviridae*

Genome Structure
 Virion Structure
 Replication
 Transformation
 Human Polyomaviruses and Disease

32. Family *Papillomaviridae*

Genome Structure
 Virion Structure
 Replication Cycle
 Disease
 Animal Papillomaviruses

33. Family *Adenoviridae*

Genome Organization
 Virion Structure
 Adenovirus Replication Cycle
 Adenoviruses and Human Disease
 Adenoviruses and Transformation
 Oncolytic Adenoviruses
 Adenoviral Vectors

34. Family *Herpesviridae*

227 Genome Organization 270
 227 Virus Structure 270
 228 Replication Cycle 272
 229 Diseases Caused by Human Herpesviruses 273
 Antitherpesviral Drugs 277
 References 278

35. Family *Poxviridae*

231 Genome Organization 280
 231 Virion Structure 280
 234 Replication 280
 Diseases 284
 Rabbit Myxoma Virus 285
 References 285

36. Family *Retroviridae*

240 Virion Structure 289
 Genome Organization 289
 Overview of the Retroviral Replication Cycle 292
 The Process of Reverse Transcription 292
 Integration 294
 Transcription of Retroviral mRNA 294
 Structural Proteins 295
 Assembly, Release, and Maturation 295
 Mechanisms of Retroviral Oncogenesis 296

37. Replication and Pathogenesis of Human Immunodeficiency Virus

247 History of HIV and Acquired Immunodeficiency Syndrome 304
 247 HIV is a Lentivirus 305
 248 HIV Proteins 307
 250 TAT 310
 250 REV 310
 Other HIV-1 Proteins 313
 253 Summary of HIV Replication 315
 254 Overview of HIV Pathogenesis 317
 254 HIV Transmission 318
 257 Disease Course 318
 259 Antiretroviral Drugs 318
 Vaccines 319

38. Family *Hepadnaviridae*

261 Genome Organization 321
 262 Virion Structure 323
 263 Replication Cycle 323
 265 Hepatitis B Virus and Disease 326

Index
