Preface

xi

Part I Evolution

1. The Darwinian Revolution

Introduction	3
Greek Antiquity	3
Christianity and Europe Until Darwin	6
Charles Darwin	8
Copernicus and Darwin	9
Darwin's Theory	10
Darwin and Wallace	11
The Darwinian Aftermath	12
Darwin and Mendel	13
The Synthetic Theory	14
Molecular Biology	16
Earth Sciences, Biogeography, and Ecology	17
The Origin of Species	18
Endnotes	20

2. Evolution Is a "Fact"

Introduction	23
The Universe	23
Biological Evolution	24
The "Fact" of Biological Evolution	25
The Fossil Record	26
Archaeopteryx and Tiktaalik	31
Extinction	34
Anatomical Similarities	35
Embryonic Similarities and Vestiges	38
Biogeography	39
Hawaii's Biological Cauldron	42
Molecular Biology	44

3. Life's Origin

Introduction	47
The Unity of Life	47
Early Life	48
What Is Life?	49
Life in the Laboratory?	50
Heredity	51
Origins	52
Endnote	53

4. LUCA and the Tree of Life

Introduction	55
Taxonomy	55
Homology and Analogy	58
Molecular Biology	62
Cladogenesis and Anagenesis: Evolutionary Trees	65
Distance Methods	67
Maximum Parsimony Methods	70
Maximum Likelihood Methods	72
Evaluation of Evolutionary Trees	72
The Molecular Clock	73
The Neutrality Theory of Molecular Evolution	75

5. Three Grand Challenges of Human Biology

Introduction	79
Life to Human	80
Human Origins	82
The Human Genome Sequence	84
Beyond the Human Genome	85
Ontogenetic Decoding	85
The Brain—Mind Puzzle	88
The Ape-to-Human Transformation	90
Biological Evolution Versus Cultural Evolution	91
Endnotes	95

Part II

Explanation

6. Design Without Designer

Introduction	99
The Argument From Design	101
Emergence of Modern Science	103
Darwin's Discovery	103
Natural Selection as a "Design" Process	104
Mathematical Challenges	107
Design and Chance	109

Evidence of Evolution	112
Defects, Deficiencies, and Dysfunctions	115
Powers and Limits of Science	118
Endnotes	119
7. Adaptation and Novelty: Teleological Explanations in Evolutionary Biology	
Introduction	121
Teleology	122
Teleological Explanations: A Definition	124
Teleological Features and Behaviors in Organisms	126
Proximate Versus Ultimate Teleology	128
Natural Versus Artificial Teleology	129
Determinate Versus Indeterminate Teleology	130
Objections and Responses	131
Teleology and Causality	133
Teleological Explanations Are Testable Hypotheses	135
Utility as Touchstone Criterion	137
Teleology Versus Teleonomy: Cicero's Translation of Aristotle's <i>Aition</i>	138
Ernst Mayr (1998) on Teleology	140
Endnote	142
8. Evolution and Progress	
Introduction	143
Early Ideas	144
Evolutionary Progress	145
Change, Evolution, Direction	146
The Concept of Progress	147
Evolutionary Progress	149
The Expansion of Life	153
Standards of Progress	155
Information Processing	157
Concluding Observations	160
9. The Scientific Method	
Introduction	163
Beyond Inductivism	163
Scientific Knowledge	165
Induction in Science	167
The Hypothetico-Deductive Method	168
The Criterion of Demarcation	170
Verifiability and Falsifiability	172
Empirical Content or "Truthfulness"	174
Contingency and Certainty	174
"Fact" and "Theory" in Scientific Use	175

Error and Fraud in Science	176
The Scientific Method in Practice	178
A Historical Paradigm: Mendel's Discovery of the Laws of Heredity	179
Destruction of Knowledge by Ideology: Lysenko and Genetics in the Soviet Union	181
The Curious Case of Darwin, or the Discrepancy Between What Scientists Say and What They Do	183
Theory Replacement: Phlogiston and Lavoisier	186
Theory Replacement: Newtonian Mechanics and Einstein	187
Hurried Science: Robert Koch's Failed Tuberculosis Vaccine	189
Explanatory Context of Discovery, or Why Empirical Testing Is Not Enough: Avery's DNA and Wegener's Continental Drift	190
Social Mechanisms: Peer Review and Publication	192
Endnotes	193
 10. Reduction and Emergence	
Introduction	195
Reductionism	196
Three Issues: Ontological, Methodological, and Epistemological Reduction	196
Ontological Reduction	197
Methodological Reduction	198
Epistemological Reduction	201
Emergence	202
Conditions for Epistemological Reduction	204
From Biology to Physics?	206
Consciousness and the Brain	207
Endnote	209
 11. Microevolution and Macroevolution: A New Evolutionary Synthesis?	
Introduction	211
Rectangular Evolution Versus Gradualism	212
The Theory of Evolution	214
Gould's Theory	215
Darwinian Logic	216
Theoretical Propositions	218
The Autonomy of Macroevolution	219
Tempo and Mode in Evolution	220
<i>Eocoelia</i> : Punctuated or Gradual Evolution?	222
Gene Evolution Versus Species Selection	224
The Spandrels of San Marco	227
Hierarchy and Epistemological Emergence	228
The Autonomy of Macroevolution	231
Endnotes	232

Part III

Ethics, Aesthetics, and Religion**12. Ethics**

Introduction	239
Darwin and the Moral Sense	240
Moral Behavior Versus Moral Norms	242
Darwinian Aftermath	243
Moral Behavior as Rational Behavior	244
Conditions for Ethical Behavior	246
Adaptation or Exaptation?	248
Altruism and Group Selection	249
Whence Moral Codes?	251
Sociobiology's Account of Moral Behavior	252
Altruism: Biological and Moral	255
Gene—Culture Coevolution	259

13. Aesthetics

Introduction	261
Origins	261
Oldowan and Acheulean Cultures	262
Mousterian Culture and Neanderthals	268
Symbolism and Aesthetics: Aurignacian and Magdalenian Cultures	271

14. Religion 277

Introduction	277
Religion	277
Creation	278
God's World	279
Natural Theology	281
The Bridgewater Treatises	283
Organisms	284
Copernicus and Darwin	286
Evolution and the Bible	287
Evil, Pain, and Sin	290
Evolution's Account	292
The New Atheists	294
Evolution and Faith	296
Endnotes	297

15. Law and the Courts

Introduction	299
Science and the Courts	300
The Frye Decision: Seven Decades Without Appropriate Science	301
Daubert: A New Focus on Scientific Knowledge	302

Determining Scientific Validity	303
Scientific Criteria for Scientific Claims	304
Science in the Courts	306
Examples of Good Science: Gregor Mendel	307
Good and Bad Science: Robert Koch and Tuberculosis	308
Institutional Mechanisms	308
Concern for Rejecting Ideas That Are Right	309
<i>Daubert's</i> Aftermath	310
 16. Intelligent Design	
Introduction	313
The Design Argument	314
The Design Argument in Antiquity	315
Christian and Islam Authors	316
Hume's Critique	318
Natural Theology	319
A Political Move	322
Mollusks' Eyes	323
No Evidence, No Science	326
Bacterial Flagellum, Blood Clotting, Immune System	328
Gambling Without Natural Selection	330
Counterpoint	331
Creationism	333
Endnotes	337
 17. Human Evolution, Genetic Engineering, and Cloning	
Introduction	339
Human Origins	340
Cultural Evolution	341
Biological Evolution in Modern Humans	343
Future Natural Selection	345
Genetic Disorders	346
The Future	348
Genetic Therapy	349
H. J. Muller's Forecast	350
Cloning	352
The Genotype and the Individual	354
Cloning Humans?	357
Therapeutic Cloning	358
 Glossary	361
References	373
Index	397
