Introduction.....	xxxix
Acknowledgments	xxxiii

SECTION I COMPUTATIONAL BIOLOGY - METHODOLOGIES AND ALGORITHMS

CHAPTER 1	Using Methylation Patterns for Reconstructing Cell Division Dynamics: Assessing Validation Experiments.....	3
1.1	Introduction	3
1.1.1	Using Methylation Patterns.....	3
1.1.2	Bisulfite Treatment.....	4
1.2	Errors, Biases, and Uncertainty in Bisulfite Sequencing	5
1.3	Model for Degradation and Sampling	5
1.3.1	Modeling.....	5
1.3.2	Simulation Study: Effects of Degradation.....	6
1.4	Statistical Inference Method	7
1.5	Simulation Study: Bayesian Inference.....	11
1.6	Discussion.....	11
1.6.1	Different Experiments	12
1.6.2	Opportunities	13
1.6.3	Conclusions.....	14
	References	14
CHAPTER 2	A Directional Cellular Dynamic Under the Control of a Diffusing Energy for Tissue Morphogenesis: Phenotype and Genotype.....	17
2.1	Introduction	17
2.2	Mathematical Morphological Dynamics.....	19
2.2.1	Gene and Status Expression.....	20
2.3	Attainable Sets of Phenotypes	21
2.3.1	Implementation	21
2.4	Prediction Tool Based on a Coevolution of a Dynamic Tissue with an Energy Diffusion	27
2.4.1	Prediction of Tissue Growth	27
2.4.2	Energy Diffusion Model.....	28
2.4.3	Results.....	31
2.5	Discussion.....	34
	References	34

CHAPTER 3	A Feature Learning Framework for Histology Images Classification	37
3.1	Introduction	37
3.2	Methods	38
3.2.1	<i>Color and Color Spaces</i>	38
3.2.2	Features Extraction and Classification.....	39
3.3	Proposed System	40
3.4	Image Data Sets.....	42
3.5	Experimental Results.....	43
3.6	Conclusion	46
	Acknowledgments	46
	References	46
CHAPTER 4	Spontaneous Activity Characterization in Spiking Neural Systems with Log-Normal Synaptic Weight Distribution	49
4.1	Introduction	49
4.2	Models of Spontaneous Activity	50
4.3	Model and Methods.....	50
4.3.1	LIF Neural System Applied Synaptic Input	50
4.3.2	Izhikevich Neural System Used for Synaptic Input	52
4.3.3	Evaluation Indices	53
4.4	Results and Evaluations	53
4.4.1	Effect of Input Spike from Weak Synapse in LIF Neural System	53
4.4.2	Spike Transmission in LIF Neural System.....	55
4.4.3	Spike Transmission in Izhikevich Neural System.....	56
4.5	Conclusions.....	58
	Acknowledgment.....	58
	References	58
CHAPTER 5	Comparison between OpenMP and MPICH Optimized Parallel Implementations of a Cellular Automaton that Simulates the Skin Pigmentation Evolution.....	61
5.1	Introduction	61
5.1.1	The Cellular Automaton Game of Life	62
5.2	MPICH Optimized Approach of the Cellular Automaton	63
5.2.1	MPI Standard.....	63
5.2.2	Description of the MPICH Approach of the Cellular Automaton	63
5.2.3	MPICH Implementation of the Cellular Automaton	65
5.3	OpenMP Optimized Approach of the Cellular Automaton.....	68
5.3.1	Open Multiprocessing	68
5.3.2	Description of the OpenMP Approach of the Cellular Automaton	68
5.3.3	OpenMP Implementation of the Cellular Automaton	68

5.4 Execution Time Comparison of the Two Parallel Implementations.....	69
5.5 Conclusions.....	71
References	72

SECTION II BIOINFORMATICS, SIMULATION, DATA MINING, PATTERN DISCOVERY, AND PREDICTION METHODS

CHAPTER 6 Structure Calculation of α, α/β, β Proteins from Residual Dipolar Coupling Data Using REDCRAFT	75
6.1 Introduction	75
6.2 Background and Method	76
6.2.1 Residual Dipolar Couplings	76
6.2.2 REDCRAFT Structural Fitness Calculation	76
6.2.3 The Ensemble of Test Proteins	77
6.2.4 Simulated RDC Data	78
6.2.5 Evaluation	79
6.3 Results and Discussion.....	79
6.3.1 Structure Calculation of an α Protein	80
6.3.2 Structure Calculation of an α/β Protein	80
6.3.3 Structure Calculation of a β Protein	83
6.3.4 Effect of Error in Structure Calculation	85
6.4 Conclusion.....	87
Acknowledgments	88
References	88
CHAPTER 7 Architectural Topography of the α-Subunit Cytoplasmic Loop in the GABA_A Receptor	91
7.1 Introduction	91
7.2 Methodological Approach.....	93
7.3 Results and Discussion.....	94
7.3.1 Sequence Comparison of α Subunits	95
7.3.2 Subdomains of the ILD	96
7.3.3 Sequence Patterns in the ILD.....	96
7.3.4 Protein Architecture of the ILD	99
7.3.5 Role of the $\alpha 1$ ILD in GABA _A R	101
7.4 Conclusions.....	102
References	103
CHAPTER 8 Finding Long-Term Influence and Sensitivity of Genes Using Probabilistic Genetic Regulatory Networks.....	107
8.1 Introduction	107
8.2 Influence and Sensitivity Factors of Genes in PBNs	108
8.2.1 Influence Factor of Genes	109

8.2.2 Impact Factor of Genes	111
8.2.3 Boolean Algebra	111
8.3 A Biological Case Study	113
8.3.1 Gliomas Case Study	114
8.3.2 Stable Genes	114
8.3.3 Sensitive Genes	114
8.3.4 Hi-Impact Genes	118
8.4 Conclusion	119
Acknowledgments	119
References	119
CHAPTER 9 The Application of Grammar Space Entropy in RNA Secondary Structure Modeling	121
9.1 Introduction	121
9.2 A Shannon Entropy for the SCFG Space	122
9.2.1 An Intuitive Example	123
9.2.2 Generalization to all Structurally Unambiguous Grammars	124
9.3 GS Entropy of RNA Folding Models	125
9.4 The Typical Set Criterion	128
9.4.1 Future Work in TSC-Based Model Training Algorithms	129
9.5 Discussion and Conclusions	130
Acknowledgments	131
Appendix A Calculating Sum of Probabilities of Derivations in an SCFG	131
Appendix B Computing GS Entropy of an SCFG	132
Appendix C An Example of Calculating the GS Entropy	133
Appendix D GS Entropy of the Basic Grammar	134
Appendix D.1 Grammar Description	134
Appendix D.2 Calculations	135
Appendix D.3 Watson-Crick Base Pairing Constraint	136
Appendix D.4 Base Pair Stacking Constraint	137
References	137
CHAPTER 10 Effects of Excessive Water Intake on Body-Fluid Homeostasis and the Cardiovascular System — A Computer Simulation	139
10.1 Introduction	139
10.2 Computational Model	140
10.2.1 Cardiovascular Hemodynamics: CVSim	141
10.2.2 Body-Fluid Homeostasis: A Renal Function Model	144
10.2.3 Coupling of Systems Models	145
10.3 Results and Validation	147
10.3.1 Modeling of Short-Term Responses	147
10.3.2 Modeling of Long-Term Responses to Chronic Excessive Water Intake	151
10.4 Conclusions	154
References	155

CHAPTER 11 A DNA-Based Migration Modeling of the Lizards in Florida Scrub Habitat	157
11.1 Introduction	157
11.2 Related Works	158
11.3 Methodology	158
11.3.1 ECON Clustering	159
11.3.2 Discovery of Migration Patterns	162
11.3.3 Analysis of the Migration Patterns	164
11.4 Empirical Results	166
11.5 Conclusion and Future Research	168
References	168
CHAPTER 12 Reconstruction of Gene Regulatory Networks Using Principal Component Analysis	171
12.1 Introduction	171
12.2 Methods	172
12.2.1 State Space Model	172
12.2.2 Simplified Linear Model	173
12.3 Results and Discussion	173
12.4 Conclusion	178
References	179
CHAPTER 13 <i>n</i>D-PDPA: <i>n</i>-Dimensional Probability Density Profile Analysis	181
13.1 Introduction	181
13.2 Residual Dipolar Coupling	183
13.3 Method	184
13.4 Scoring of <i>n</i> D-PDPA	185
13.5 Data Preparation	186
13.6 Results and Discussion	188
13.6.1 Experiment 1	188
13.6.2 Experiment 2	190
13.6.3 Experiment 3	191
13.6.4 Experiment 4	192
13.7 Conclusion	194
References	194
CHAPTER 14 Biomembranes Under Oxidative Stress: Insights from Molecular Dynamics Simulations	197
14.1 Introduction	197
14.2 Theoretical Modeling	198
14.3 Case Studies	199
14.3.1 Permeability of Biomembranes to ROS	199
14.3.2 Photosensitizer Interaction with Membranes	201

14.4	Outlook	207
14.5	Conclusion and Summary	208
	Acknowledgments	208
	References	208
CHAPTER 15	Feature Selection and Classification of Microarray Data Using Machine Learning Techniques	213
15.1	Introduction	213
15.2	Literature Review	214
15.3	Methodology Used	217
	15.3.1 Feature Selection Methodology	217
	15.3.2 Classification Methodologies	221
15.4	Performance Evaluation Parameters	225
15.5	Empirical Analysis of Existing Techniques	226
	15.5.1 Results and Interpretation	226
15.6	Conclusion	237
	References	238
CHAPTER 16	New Directions in Deterministic Metabolism Modeling of Sheep	243
16.1	Introduction	243
16.2	Advantages of Whole-Body Metabolism Modeling	243
16.3	Review of Work to Date	244
16.4	Outcomes	248
16.5	Summary	248
16.6	Future Work	249
	References	250
CHAPTER 17	Differentiating Cancer from Normal Protein-Protein Interactions Through Network Analysis	253
17.1	Introduction	253
17.2	Related Literature	253
17.3	Network Analysis: Proposed Methods	254
	17.3.1 Data Set	255
	17.3.2 Basic Network Properties	257
17.4	Analysis and Results	257
	17.4.1 Hub Node Analysis	257
	17.4.2 Centrality Analysis	260
	17.4.3 Common Subgraph Analysis	262
	17.4.4 Bipartite Graph Analysis	263
17.5	Discussion and Conclusions	268
	Acknowledgments	269
	References	269

CHAPTER 18 Predicting the Co-Receptors of the Viruses that Cause AIDS (HIV-1) in CD4 Cells.....	271
18.1 Introduction	271
18.2 Antecedents	271
18.2.1 Retrovirus of the Class VI	271
18.2.2 Classification of Retrovirus.....	272
18.2.3 Vital Cycle of Retrovirus	273
18.3 Retrovirus More Common in Humans.....	273
18.3.1 Cellular Damages Causes by HIV	274
18.3.2 Detection of the HIV in Humans	274
18.4 The Tropism of AIDS	276
18.5 Materials and Methods	276
18.5.1 Data Collection.....	276
18.5.2 Generation of Characteristics.....	276
18.5.3 Results.....	280
18.6 Conclusions.....	283
References	284

SECTION III SYSTEMS BIOLOGY AND BIOLOGICAL PROCESSES

CHAPTER 19 Cellular Automata-Based Modeling of Three-Dimensional Multicellular Tissue Growth.....	287
19.1 Introduction	287
19.2 Related Work.....	288
19.3 Modeling of Biological Processes	290
19.3.1 Cell Division.....	291
19.3.2 Cell Motion.....	291
19.3.3 Cell Collision.....	292
19.3.4 Cell Aggregation	292
19.4 Computational Model.....	292
19.5 Algorithm.....	294
19.5.1 Initial Condition and Inputs	294
19.5.2 Iterative Operations	295
19.5.3 Division Routine.....	296
19.5.4 Direction Change Routine.....	296
19.6 Calculations of Tissue Growth Rate	296
19.7 Simulation Results and Discussion.....	297
19.7.1 Effect of Cell Heterogeneity on Volume Coverage and Tissue Growth Rate.....	297
19.7.2 Comparison of the Two Uniform Cell Seeding Distributions	299
19.8 Conclusion and Future Work	300

Acknowledgments	301
Definitions of Key Terms	301
References	301
CHAPTER 20 A Combination of Protein-Protein Interaction Network Topological and Biological Process Features for Multiprotein Complex Detection	305
20.1 Introduction	305
20.2 Method	306
20.2.1 Features Extraction	306
20.2.2 Preparing and Preprocessing of the Data	308
20.2.3 Mining Patterns (Classification)	309
20.2.4 Postprocessing Patterns	309
20.3 Experimental Work and Results	310
20.4 Conclusion	314
Acknowledgment	314
References	314
CHAPTER 21 Infogenomics: Genomes as Information Sources	317
21.1 Introduction	317
21.2 Basic Notation	317
21.3 Research Lines in Infogenomics	318
21.4 Recurrence Distance Distributions	320
21.5 An Informational Measure of Genome Complexity	321
21.6 Extraction of Genomic Dictionaries	322
21.7 Conclusions	323
References	323
SECTION IV DATA ANALYTICS AND NUMERICAL MODELING IN COMPUTATIONAL BIOLOGY AND BIOINFORMATICS	
CHAPTER 22 Analysis of Large Data Sets: A Cautionary Tale of the Perils of Binning Data	327
22.1 Introduction	327
22.2 Methods	328
22.2.1 Data Set	328
22.2.2 Binning	328
22.2.3 StickWRLD Analysis	329
22.3 Results	329
22.3.1 Binning Variation 1	329
22.3.2 Binning Variation 2	329
22.3.3 Comparison of Correlations Between Binning Variations	330

22.4	Discussion.....	331
22.5	Conclusions.....	331
	References	331
CHAPTER 23	Structural and Percolation Models of Intelligence: To the Question of the Reduction of the Neural Network	333
23.1	Introduction	333
23.2	Abilities of the Brain While Processing Information.....	334
23.3	Formalized Structural Model of Intellectual Activity	334
23.4	The Percolation Model of Intellectual Activity.....	336
	References	340
SECTION V	MEDICAL APPLICATIONS AND SYSTEMS	
CHAPTER 24	Analyzing TCGA Lung Cancer Genomic and Expression Data Using SVM with Embedded Parameter Tuning.....	343
	Abbreviations.....	343
24.1	Introduction	343
24.2	Methods	344
24.3	Results and Discussion.....	347
24.4	Conclusions.....	353
	Supplementary Materials.....	353
	Competing Interests.....	354
	Authors' Contributions.....	354
	Acknowledgment.....	354
	References	354
CHAPTER 25	State-of-the-Art Mock Human Blood Circulation Loop: Prototyping and Introduction of a New Heart Simulator.....	357
25.1	Introduction	357
	25.1.1 Background.....	358
25.2	Novel Design of MCL.....	361
	25.2.1 LV Heart Simulator Design of MCL.....	365
25.3	Conclusions.....	367
	References	367
CHAPTER 26	Framework for an Interactive Assistance in Diagnostic Processes Based on Probabilistic Modeling of Clinical Practice Guidelines.....	371
26.1	Introduction	371
26.2	Approach of Modeling CPGs.....	372
26.3	Construction of the Interface	373
	26.3.1 State of the Art	373
	26.3.2 Modeling of a Particular Disease.....	374

26.4	Bayesian Nets	376
26.4.1	State of the Art	376
26.4.2	Transformation of a UML Activity	376
26.4.3	Network Structure	378
26.4.4	Network Parameters	381
26.4.5	Assistance Function	382
26.5	Verification and Validation	384
26.6	Conclusion	388
	References	388
CHAPTER 27	Motion Artifacts Compensation in DCE-MRI Framework Using Active Contour Model	391
27.1	Introduction	391
27.2	DCE Technique	392
27.3	Active Contour	395
27.4	Methodology and Implementation	397
27.4.1	Select ROI	397
27.4.2	Identification of the ROI	399
27.4.3	Active Contour	400
27.4.4	Extending the Boundaries of the Entire Temporal Sequence	401
27.5	Tracking Motion	401
27.6	Results	403
27.7	Conclusions	408
	References	408
CHAPTER 28	Phase III Placebo-Controlled, Randomized Clinical Trial with Synthetic Crohn's Disease Patients to Evaluate Treatment Response	411
28.1	Introduction	411
28.2	Materials and Methods	413
28.2.1	Study Design	413
28.2.2	Data Extraction	413
28.2.3	Data Generation	415
28.2.4	Data Analytics	420
28.3	Results	420
28.4	Discussion	423
	Acknowledgments	425
	References	425
CHAPTER 29	Pathological Tissue Permittivity Distribution Difference Imaging: Near-Field Microwave Tomographic Image for Breast Tumor Visualization	429
29.1	Introduction	429
29.2	The Signals of BRATUMASS	429

29.3	Fourier Diffraction Theorem	432
29.4	Tissue Dielectric Properties and Reflection Coefficient	434
29.5	Quarter of Iteration of Fractional Fourier Transformation Algorithm and the Signal Processing	436
29.5.1	Quarter of Iteration of FRFT Algorithm	436
29.5.2	The Influences to Sinusoidal Signal Structure by Quarter Iteration of FRFT	437
29.5.3	Processing Results Comparison between $S_f^0(n)$ and $S_f^1(n)$	437
29.6	Microwave Image of Sagittal Iterative Reconstruction Algorithm	438
29.6.1	Mathematical Description	438
29.6.2	Reconstruction Method Based on Sagittal Distribution Characteristics	438
29.6.3	Algorithm Convergence Statement	440
29.7	BRATUMASS Clinical Trials	441
29.7.1	Screening and Locating of the Breast Cancer's Clinical Trials Case	442
29.7.2	Interventional Therapeutic Pattern Before and After Surgical Operation's Comparison	442
29.8	Conclusions	445
	Acknowledgment	445
	References	445
CHAPTER 30	A System for the Analysis of EEG Data and Brain State Modeling	447
30.1	Introduction	447
30.2	System for EEG Data Collection, Storage, and Visualization	449
30.2.1	EEG Data Collection and Storage	450
30.3	Data Analysis	455
30.3.1	Data Analysis on Raw Data Sets	455
30.3.2	Data Analysis on Normalized Mean	457
30.4	Conclusion	463
30.5	Future Work	464
	Acknowledgments	465
	References	465
CHAPTER 31	Using Temporal Logic to Verify the Blood Supply Chain Safety	467
31.1	Introduction	467
31.2	Formally Modeling Blood Bank Workflows	468
31.3	The Blood Safety Workflow	470
31.4	Updating the YAWL2DVE Translator	474
31.5	Verifying Blood Bank Workflows Against Safety Requirements	475
31.5.1	Syntax	475
31.5.2	Semantics	475
31.5.3	Mapping Safety Requirements as Assertions in States and State Transitions	476

31.6	Implementation	486
31.7	Related Work	489
31.8	Conclusions.....	490
	Acknowledgments	490
	References	491
CHAPTER 32	Evaluation of Window Parameters of CT Brain Images with Statistical Central Moments	493
32.1	Introduction	493
32.2	Window Setting	494
32.3	Mathematical Description of Central Moments	495
32.4	Results and Discussion.....	496
32.5	Comparisons	499
32.6	Conclusion	502
	Acknowledgment.....	502
	References	502
CHAPTER 33	An Improved Balloon Snake Algorithm for Ultrasonic Image Segmentation	505
33.1	Introduction	505
33.2	Methods	506
	33.2.1 Balloon Snake Model	506
	33.2.2 The MAC Model	507
	33.2.3 Generalized AMBBS Model	510
	33.2.4 The Analysis of the Recovery of Broken Boundary	513
33.3	Simulation Studies.....	514
	33.3.1 Capturing Complex Geometries.....	515
	33.3.2 Resilience to Arbitrary Initializations.....	515
	33.3.3 Convergence on Weak Edges	517
	33.3.4 Recovering Noise Images	517
33.4	Experimental Results.....	518
33.5	Conclusion	521
	Acknowledgments	521
	References	521
CHAPTER 34	Brain Ventricle Detection Using Hausdorff Distance	523
34.1	Introduction	523
34.2	The Hausdorff Distance	523
34.3	The Proposed Method	525
	34.3.1 Creating the Model.....	525
	34.3.2 Ventricles Detection with the Template Produced.....	527

34.4 Discussion.....	528
34.5 Conclusion.....	531
References	531
CHAPTER 35 Tumor Growth Emergent Behavior Analysis Based on Cancer Hallmarks and in a Cancer Stem Cell Context.....	533
35.1 Introduction	533
35.2 Methods	534
35.3 Results.....	536
35.3.1 Emergent Behaviors and Related Hallmarks.....	536
35.3.2 Effect of Cancer Stem Cells on the Resultant Behavior.....	538
35.4 Conclusions.....	541
Acknowledgments	542
References	542
Index	545
