

CONTENTS

Contributors

xi

1. Introduction

1

Berenika Plusa and Anna-Katerina Hadjantonakis

2. Cell Polarity-Dependent Regulation of Cell Allocation and the First Lineage Specification in the Preimplantation Mouse Embryo

11

Deepak Saini and Yojiro Yamanaka

1. Introduction 12
2. Compaction and Polarization: Two Key Morphogenetic Events Influencing the Formation of Outer/Inner Cells 14
3. Asymmetric Division and the Establishment of the Outer/Inner Configuration of Polar/Apolar Cells 19
4. Activation of Lineage-Specific Genetic Programs in the Outer/Inner Cells to Form the TE and ICM Lineages 23
5. How Do the Cells Within the Embryo Sense Their Position to Properly Regulate Hippo Signaling? 26
6. Future Perspectives 29
- Acknowledgments 30
- References 30
- Further Reading 35

3. Cell Fate Decisions During Preimplantation Mammalian Development

37

Stephanie Bissiere, Maxime Gasnier, Yanina D. Alvarez, and Nicolas Plachta

1. Introduction 38
2. Gene Knockouts Pave the Way to Understand Cell Fate Decisions 38
3. Different Patterns of TF Expression Levels 39
4. Gene Expression Dynamics 41
5. TF Intracellular Transport Dynamics 41
6. TF Nuclear–Cytoplasmic Shuttling in Embryos 42
7. Cell-to-Cell Variability in the Early Embryo 43
8. TF–DNA Binding Dynamics in the Embryo 45
9. Epigenetic Regulation 47
10. Additional Levels of Gene Regulation 48

11. How Gene Regulation Impacts on Cell Shape and Position	49
Acknowledgments	52
References	52
4. Our First Choice: Cellular and Genetic Underpinnings of Trophectoderm Identity and Differentiation in the Mammalian Embryo	59
Sergio Menchero, Julio Sainz de Aja, and Miguel Manzanares	
1. Heterogeneity Emergence in the Mouse Embryo	60
2. The TE Gene Regulatory Network	62
3. Establishment of TE Fate	65
4. Plasticity During Lineage Segregation	68
5. Recapitulating TE Identity in Culture	69
6. TE Derivatives and Their Role in the Postimplantation Embryo	70
7. Conclusions	73
Acknowledgments	74
References	74
5. Primitive Endoderm Differentiation: From Specification to Epithelialization	81
Cécilia Bassalart, Lorena Valverde-Estrella, and Claire Chazaud	
1. Introduction	82
2. Generation of Trophectoderm and Inner Cell Mass Cell Lineages	82
3. Regulation of the Epi/PrE Specification	84
4. Mechanism for Salt and Pepper Pattern Propagation	88
5. Induction of Epi/PrE Specification	89
6. PrE Maturation Through the FGF Pathway	92
7. Other Signaling Pathways Involved in PrE Maturation and Maintenance	93
8. Cell Sorting and PrE Epithelialization at the Late Blastocyst Stage	93
9. The PrE Derivatives: The Visceral and the Parietal Endoderm	96
10. Conclusion	98
References	98
6. The Regulative Nature of Mammalian Embryos	105
Katarzyna Klimczewska, Anna Kasperczyk, and Aneta Suwińska	
1. Introduction	106
2. Blastomere Potency to Give Rise to the Whole Organism	107
3. Blastomeres of the Cleaving Embryo—Morphologically Identical, yet Molecularly Distinct	113
4. Potency of Blastomeres to Multilineage Differentiation	116

5. Potency of Blastomeres to Generate Chimeras: Breaking Interspecies Barriers	121
6. ESCs—An in vitro Reflection of Embryonic Plasticity and Potency	124
7. Mechanisms Underlying Plasticity of Blastomeres and Embryos	127
8. From Theory to Practice: Potential and Real Benefits of Embryo Plasticity	132
9. Summary	135
Acknowledgments	135
References	136
Further Reading	149
7. States and Origins of Mammalian Embryonic Pluripotency	151
In Vivo and in a Dish	151
Priscila Ramos-Ibeas, Jennifer Nichols, and Ramiro Alberio	
1. Derivation and Characterization of Murine Embryonic Stem Cell Lines	152
2. Alternative Stem Cell States	155
3. Pluripotent Stem Cell Lines From Nonrodent Mammals: Common and Divergent Properties	157
4. Use of Chimeras to Determine Naïve State: Successes and Limitations	162
5. Properties of Blastocysts From Different Species: Morphological and Transcriptional Overlap and Divergence	164
6. Overcoming Developmental Progression to Promote Epiblast Self-renewal	168
7. The Pig as a Model System for Human Development	170
Acknowledgments	171
References	171
8. Capturing and Interconverting Embryonic Cell Fates in a Dish	181
Jennifer Watts, Alyson Lokken, Alexandra Moauro, and Amy Ralston	
1. Introduction	182
2. Mechanisms Repressing TS Cell Fate in ES Cells	183
3. Reprogramming and the TS Cell Lineage Barrier	187
4. Mechanisms Repressing XEN Cell Fate in ES Cells	188
5. Cell-Intrinsic Repression of XEN Cell Fate in Pluripotent Cells	192
6. Reprogramming Somatic Cells to XEN-Like Cells	193
7. In Search of a Totipotent Cell Line	196
Acknowledgments	197
References	197
9. From Germline to Soma: Epigenetic Dynamics in the Mouse Preimplantation Embryo	203
Michelle K.Y. Seah and Daniel M. Messerschmidt	
1. Oocyte-to-Embryo Transition	204

2. Epigenetics	205
3. Coda	226
References	227
10. Pre-gastrula Development of Non-eutherian Mammals	237
Stephen Frankenberg	
1. Introduction	238
2. Overview of Monotreme Development	242
3. Overview of Marsupial Development	245
4. Pluriblast-Trophoblast Segregation	246
5. Epiblast-Hypoblast Segregation	252
6. Axes and Asymmetry	254
7. Discussion: Homologies Among Vertebrates in Lineage Specification and Regulation of Potency	257
Glossary	262
References	262
11. Pre-implantation Development of Domestic Animals	267
Anna Piliszek and Zofia E. Madeja	
1. Introduction	268
2. Timing of Preimplantation Development	268
3. Embryonic Genome Activation	269
4. Metabolic Requirements of Preimplantation Mammalian Embryos	272
5. First Cell Fate Decision—Specification of Inner Cell Mass and Trophoctoderm	274
6. Specification of Epiblast and Hypoblast in Mammalian Blastocyst	279
7. FGF/MEK Pathway in Specification of Epiblast and Hypoblast	282
8. Conclusions	284
Acknowledgments	285
References	285
12. Human Pre-gastrulation Development	295
Sissy E. Wamaitha and Kathy K. Niakan	
1. Stages of Preimplantation Development	296
2. Regulating Gene Expression During Human Preimplantation Development	303
3. Modeling Human Pregastrulation Development In Vitro	315
4. Conclusions	321
References	322

13. The Mitochondria and the Regulation of Cell Fitness During Early Mammalian Development 339

Ana Lima, Jörg Burgstaller, Juan M. Sanchez-Nieto, and Tristan A. Rodríguez

1. Introduction	340
2. Mitochondrial Biogenesis and Shape in the Early Embryo	341
3. Mitochondrial DNA and Selection for Optimal Mitochondrial Performance	343
4. Mitochondrial Metabolism in Early Embryogenesis	347
5. Mitochondrial Control of Apoptotic Cell Death During Early Embryogenesis	352
6. Concluding Remarks	355
Acknowledgments	356
References	357

14. The Head's Tale: Anterior-Posterior Axis Formation in the Mouse Embryo 365

Matthew J. Stower and Shankar Srinivas

1. Introduction: Formation of the Egg Cylinder	366
2. Signaling Centers That Pattern the Epiblast	369
3. The Role of the AVE in A-P Axis Formation	371
4. The Formation of the DVE	376
5. What Controls the Direction of AVE Cell Migration?	379
6. What Is the Mechanism of AVE Cell Migration?	382
7. Conclusion	385
References	386
