Contributors	ix
Preface	xi

1. Probing the Translation Dynamics of Ribosomes Using Zero-Mode Waveguides	1
Albert Tsai, Joseph D. Puglisi, Sotaro Uemura	
1. Introduction	2
2. The Ribosome Must Choreograph Complex Interactions Between Translation Factors, tRNAs, and mRNAs	3
3. The Challenges of Observing Components of the Translation Machinery at High Concentrations	5
4. Zero-Mode Waveguide Fluorescence Microscopy Allows the Translation Machinery to be Tracked at High Concentrations of Labeled Ligands	7
5. Tracking tRNA Transitioning Through Elongating Ribosomes Inside ZMWs at Near-Physiological Conditions	9
6. Surface Inactivation Prevents Protein and Nucleic Acid Aggregation on Metal Surfaces	10
7. Tracking tRNA Transiting through the Ribosome through Multiple Rounds of Elongation	11
8. Tracking tRNA Transit at High Concentrations Reveal a Stochastic tRNA Exit Mechanism From the E Site	13
9. Dissecting the Mechanism of Initiation and Elongation	14
10. Defining the Pathway to Assembling a Preinitiation Complex and Transitioning Into Elongation	15
11. The Role of EF-G in Translocating the Ribosome: Coupling Compositional Dynamics to Conformational Changes of the Ribosome	18
12. Adapting a Commercially Available ZMW Instrument for General Single-Molecule Fluorescence Experiments	23
13. The RS Sequencer Provides a Flexible Platform for Multicolor and High-Throughput Single-Molecule Microscopy	24
14. Using the RS to Dissect the Mechanism of Translational Stalling	27
15. The Mechanism of -1 Frameshifting	31
16. The Future of ZMW Microscopy in the Study of Complex Biological Systems	35
References	37

2. -1 Programmed Ribosomal Frameshifting as a Force-Dependent Process	45
Koen Visscher	
1. -1 Programmed Ribosomal Frameshifting	46
2. Applying Mechanical Forces to Individual Molecules	49
3. Varying or Constant Force Protocols	55
4. Probing -1 PRF Elements with Force	58
5. Conclusions	66
References	67
3. Studies of RNA Sequence and Structure Using Nanopores	73
Robert Y. Henley, Spencer Carson, Meni Wanunu	
1. Introduction to Nanopores	74
2. Early Experiments Toward RNA Sequencing	75
3. Point-of-Care Applications	79
4. RNA Structural Analysis	90
5. Conclusions	96
References	97
4. Photocontrolled Intracellular RNA Delivery Using Nanoparticles or Carrier-Photosensitizer Conjugates	101
Kazunori Watanabe, Takashi Ohtsuki	
1. Introduction	102
2. Gold Nanoparticles	103
3. Silver Nanoparticles	107
4. Upconversion Nanoparticles	108
5. Protein-Photosensitizer Conjugates	111
6. Polymer Complexes Containing Photosensitizers or Photodegradable Linkers	112
7. Conclusions	113
References	116
5. RNA Study Using DNA Nanotechnology	121
Hisashi Tadakuma, Takeya Masubuchi, Takuya Ueda	
1. Introduction	121
2. DNA Nanotechnology	123
3. How to Make DNA Nanostructure	143

4. Application of DNA Nanotechnology in RNA Biology	146
5. Prospects	154
Acknowledgments	155
References	155
6. RNA and RNP as Building Blocks for Nanotechnology and Synthetic Biology	165
Hirohisa Ohno, Hirohide Saito	
1. RNA Nanotechnology	166
2. RNA-Protein (RNP) Nanostructures	171
3. Applications of RNP Nanostructure	174
4. RNP Motifs as a Biological Tool	180
5. Conclusion and Future Perspectives	180
Acknowledgments	182
References	182
Index	187
