1. Sensing the Environment Through Sestrins: Implications for Cellular Metabolism

1

A. Parmigiani, A.V. Budanov

1. Introduction

3

2. Regulation and Function of Sestrins

4

3. Sestrins are Sensors of Nutrient Availability and are Involved in Regulation of Metabolism

23

4. Conclusions and Perspectives

31

Acknowledgments

32

References

32

2. Metabolic Regulation of Apoptosis in Cancer

43

K. Matsuura, K. Canfield, W. Feng, M. Kurokawa

1. Introduction

44

2. Overview of Apoptosis Pathways

45

3. Regulation of Apoptosis Through Glycolytic Pathway

51

4. p53 and Glucose Metabolism

60

5. Regulation of Apoptosis by Lipid Metabolism

63

6. Concluding Remarks

73

Acknowledgments

73

References

73

3. A Mechanistic Approach to the Development of Gene Therapy for Chronic Pain

89

C. Kibaly, H.H. Loh, P.-Y. Law

1. Introduction

90

2. Basics of Gene Therapy

92

3. Physiological Mechanisms of Nociception/Pain

105

4. Chronic Neuropathic Pain	113
5. Chronic Nociceptive or Inflammatory Pain	130
6. Chronic Mixed Pain (Cancer), Opioid Analgesia, and Gene Therapy	137
7. Conclusions	143
Acknowledgments	145
References	145
 4. Roles and Regulation of Epithelial Splicing Regulatory Proteins 1 and 2 in Epithelial-Mesenchymal Transition	163
E.-L. Göttgens, P.N. Span, M.M. Zegers	
1. Introduction	164
2. Epithelial-Mesenchymal Transition Program	166
3. Alternative Splicing in EMT	167
4. ESRPs as Regulators of EMT	179
5. Regulation of ESRP Expression and Function	182
6. Linking ESRPs to Carcinogenesis	184
7. Concluding Remarks	187
References	188
 5. Orchestrating Lymphocyte Polarity in Cognate Immune Cell-Cell Interactions	195
E. Bustos-Morán, N. Blas-Rus, N.B. Martín-Cófreces, F. Sánchez-Madrid	
1. Introduction	196
2. Membrane Microdomains and Nanoclusters Orchestrate Cell-Cell Contacts	199
3. Centrosome as Organelle-Organizing Center	211
4. Endoplasmic Reticulum and Golgi Apparatus	216
5. Multivesicular Bodies in Secretion, Recycling, and Renewal of Immune Synapse Components	219
6. Lysosomes and Autophagy: More Than Degradation	223
7. Mitochondria: Powering Immune Synapse	225
8. Lytic Granules: Polarizing Killing Machinery	231
9. Asymmetric Cell Division: Versus Clonal Expansion	236
10. Concluding Remarks	243
Acknowledgments	245
References	245

6. The Process of Cornification Evolved from the Initial Keratinization in the Epidermis and Epidermal Derivatives of Vertebrates: A New Synthesis and the Case of Sauropsids	263
L. Alibardi	
1. Introduction	264
2. Keratinization and Cornification are Continuous but not Equivalent Process	265
3. Anamniote Epidermis Keratinizes While Cornification Occurs in few Body Regions	270
4. Formation of the Corneous Layer in Amniotes	275
5. Increase of Protein Types in Amniote Epidermis Compared to Anamniotes	279
6. Alpha and Beta-Keratinization Indicate Prevalence of Corneous Proteins Containing Alpha-Helix or Beta-Sheets, not of Keratins	284
7. Differences Between IF-Alpha/Beta-Keratins and Sauropsid Beta-Keratins Indicate the Latter are Corneous Beta-Proteins	287
8. The Process of Cornification in Sauropsids	293
9. Evolution of the Process of Cornification in the Epidermis and Skin Appendages: A New Synthesis	301
10. Concluding Remarks and Future Directions	308
Acknowledgements	309
References	309
7. The Calcium-Sensing Receptor in Health and Disease	321
G. Díaz-Soto, A. Rocher, C. García-Rodríguez, L. Núñez, C. Villalobos	
1. Structure and Physiological Functions of the CaSR	323
2. Monitoring CaSR Activity in Living Cells	337
3. CaSR in Endocrine Pathology	340
4. CaSR in Cardiovascular Physiopathology	343
5. CaSR in Asthma	344
6. CaSR in Alzheimer's Disease	347
7. CaSR in Cancer	350
Acknowledgments	362
References	362
8. Molecular Interactions Between Flowering Time and Abiotic Stress Pathways	371
H.J. Park, W.-Y. Kim, J.M. Pardo, D.-J. Yun	
1. Introduction	372
2. Developmental and Seasonal Control of Flowering Time	373

3. Key Molecular Regulators of Flowering Time	375
4. Abiotic Stresses Affecting Flowering Time	377
5. Stress-Signal Integration by Major Flowering Time Regulators	384
6. Role of GI in Influencing Flowering Time and Circadian Clock Components	396
7. Conclusions	399
Acknowledgments	400
References	400
