

CONTENTS

Preface	xiii
Acknowledgements	xv
Chapter 1 Biodiversity and Taxonomy	1
Introduction	2
<i>The Naming and Classification of Organisms</i>	2
<i>The Identification of Species</i>	3
<i>Biodiversity Hotspots Versus Cold Spots</i>	3
<i>Citizen Science</i>	4
References	4
Exercise 1.1 Ecology and Taxonomy	5
Exercise 1.2 What's in a Name? Vernacular Versus Scientific Names	7
Exercise 1.3 The Classification of Animals	9
Exercise 1.4 Constructing a Dichotomous Key	11
Exercise 1.5 Global Biodiversity: The Numbers of Recognised Species	13
Exercise 1.6 Diversity in Chalcid Wasps	14
Exercise 1.7 Lognormal Distribution of Species Relative Abundance	15
Exercise 1.8 The Discovery of New Species	16
Exercise 1.9 Extinctions Versus Discovery of New Species	18
Exercise 1.10 The Historical Ecology of the Large Mammals of Ngorongoro Crater	20
Exercise 1.11 Pest Eradication in New Zealand	22
Exercise 1.12 Citizen Science: Biodiversity and Environmental Studies	25
Exercise 1.13 The Ecological Value of Ancient Woodland	27
Chapter 2 Abiotic Factors and Ecophysiology	29
Introduction	30
<i>Limits for Life</i>	30
<i>Climatic Variation</i>	30
<i>Temperature Regulation</i>	31
<i>Adaptation to Harsh Environments</i>	31
References	31
Exercise 2.1 Climatic Variations	32
Exercise 2.2 Lake Stratification	34
Exercise 2.3 Carbon Dioxide and Photosynthesis	35
Exercise 2.4 The Effect of Water Table Depth on Seed Germination	36
Exercise 2.5 The Effect of Oxygen Level on Midge Larvae Survival	37
Exercise 2.6 Temperature Selection in Two Fish Species	38
Exercise 2.7 Adaptation to Life Underwater: Diving in Seals	39
Exercise 2.8 Surviving Salty Environments: Maintaining Osmotic Balance	40
Exercise 2.9 Living in the Desert: Temperature Tolerance in the Camel	42
Exercise 2.10 Diapause in <i>Grapholita</i>	44
Exercise 2.11 The Effect of Temperature on Dusting Behaviour in an Asian Elephant	45
Exercise 2.12 Hibernation in the Black Bear	47
Exercise 2.13 Microclimate Preferences in Woodlice	48

Chapter 3 Ecosystems, Energy and Nutrients	51
Introduction	53
Food Chains and Food Webs	53
Ecological Pyramids	54
Nutrient Cycles	55
Nutrient Cycles and People	55
Ecological Succession	56
References	56
Exercise 3.1 A Steppe Ecosystem: Biotic and Abiotic Factors	57
Exercise 3.2 Food Webs in an English Woodland	58
Exercise 3.3 Ecological Pyramids	60
Exercise 3.4 Energy Flow in Ecosystems	62
Exercise 3.5 A Comparison of Energy Budgets in Two Ecosystems	63
Exercise 3.6 Chemotrophism	64
Exercise 3.7 Grazing and Detritus Food Chains	65
Exercise 3.8 Energy Sources in Aquatic Ecosystems	66
Exercise 3.9 Energy Budget of a Bank Vole	67
Exercise 3.10 Wildlife Biomass in the Serengeti	68
Exercise 3.11 Assimilation Efficiency in the African Elephant	70
Exercise 3.12 Capybara Farming in Venezuela	72
Exercise 3.13 The Nitrogen Cycle	73
Exercise 3.14 Nitrogen Balance for Lake Mendota, Wisconsin	74
Exercise 3.15 The Economics of Fertiliser Application	75
Exercise 3.16 Sewage Sludge Cake as a Fertiliser	76
Exercise 3.17 The Effect of pH on Crop Growth	77
Exercise 3.18 Timanfaya National Park, Lanzarote: An Opportunity to Study Succession	78
Exercise 3.19 Succession in Bird Species	79
Chapter 4 Determining Abundance and Distribution	81
Introduction	82
Discovering New Species	83
Mapping Distributions	83
Estimating Population Size	84
References	84
Exercise 4.1 Recording the Distribution of Organisms	85
Exercise 4.2 Problems in Determining the Historical Distribution of Organisms	87
Exercise 4.3 Community Science: Moors for the Future	88
Exercise 4.4 Bird Ringing	92
Exercise 4.5 Zonation on a Rocky Shore	94
Exercise 4.6 The Effect of Sample Size on Population Estimates Obtained Using Quadrat Sampling	96
Exercise 4.7 Estimating the Size of a Population of Mobile Animals	98
Exercise 4.8 Estimating Population Size by Removal Trapping	100
Exercise 4.9 Studying Animal Populations Using a Calendar of Catches	102
Exercise 4.10 Population Dynamics of a Zoo Population of Chimpanzees	103
Exercise 4.11 Estimating Population Size Indirectly: Badgers and Setts	104
Exercise 4.12 Analysis of Spatial Distributions: Clumped, Uniform or Random?	107

Exercise 4.13 Estimating the Size of a Large Mammal Population by Transect Sampling	108
Exercise 4.14 Sampling Zooplankton Populations	110
Exercise 4.15 Estimating the Size of Whale Populations	111
Exercise 4.16 Estimating Population Size Using the Lincoln Index: A Simulation	113
Exercise 4.17 Population Size and Habitat Selection in Two Species of Gulls	115
Exercise 4.18 The Factors Affecting Plant Population Estimates Obtained by Quadrat Sampling: A Computer Simulation	118
Chapter 5 Population Growth	121
Introduction	122
Defining Populations	122
Population Growth	122
Life Tables and Survivorship Curves	123
<i>R</i> - and <i>K</i> -Strategists	123
References	123
Exercise 5.1 Exponential Population Growth	124
Exercise 5.2 Boom and Bust Population Growth	125
Exercise 5.3 Logistic Population Growth	126
Exercise 5.4 Density-Dependent and Density-Independent Factors and Population Control	127
Exercise 5.5 Using Leslie Matrices to Model Population Growth	129
Exercise 5.6 Life Table for the Honey Bee	132
Exercise 5.7 Survivorship of Dall Sheep	133
Exercise 5.8 Types of Survivorship Curve	134
Exercise 5.9 The Age Structure of Captive Female African Elephants	135
Exercise 5.10 Opportunity or Equilibrium: <i>r</i> -Strategist or <i>K</i> -Strategist?	136
Chapter 6 Species Interactions	139
Introduction	140
Competition and Niche Theory	140
Keystone Species	141
Predation	141
Biological Control	142
References	142
Exercise 6.1 Competition in Two Tree Species	143
Exercise 6.2 Intraspecific Competition in Barley	144
Exercise 6.3 Competitive Exclusion	145
Exercise 6.4 Competition in Flour Beetles	146
Exercise 6.5 Do Cormorants and Shags Compete for Food?	147
Exercise 6.6 Competition Between Ants and Rodents	148
Exercise 6.7 Defining the Niche	149
Exercise 6.8 Niche Separation in Warblers	152
Exercise 6.9 Niche Separation in Tropical Monkeys	154
Exercise 6.10 Predator-Prey Simulation	155
Exercise 6.11 Predation of Foxes on Rabbits	156
Exercise 6.12 The Effects of Disease, Climate and Vegetation Change on Large Mammal Populations	158
Exercise 6.13 Biological Control	161
Exercise 6.14 Seals and Phocine Distemper Virus	162

Chapter 7 Behavioural Ecology and Ecological Genetics	165
Introduction	167
<i>Evolutionarily Stable Strategies and Game Theory</i>	167
<i>Industrial Melanism</i>	167
<i>Metal Tolerance in Plants</i>	168
<i>Genetic Conservation</i>	168
References	168
Exercise 7.1 Identifying Individual Animals	169
Exercise 7.2 Radio-Tracking Animals	171
Exercise 7.3 Activity Budgets in Asian Elephants	173
Exercise 7.4 Feeding Strategies in Lizards	175
Exercise 7.5 Roaring Contests in Red Deer	176
Exercise 7.6 Territoriality in Feral Cats	177
Exercise 7.7 Safety in Numbers: Flocking as an Antipredator Device	179
Exercise 7.8 The Effect of Prey Density on Territory Size in an Avian Predator	180
Exercise 7.9 Flexibility in the Social Behaviour of Pied Wagtails	181
Exercise 7.10 Optimal Foraging Theory: Using Game Theory to Study Ecological Strategies	182
Exercise 7.11 Evolutionarily Stable Strategies: Reproduction in Dung Flies	184
Exercise 7.12 Industrial Melanism: Hiding in Plain Sight	186
Exercise 7.13 Zinc Tolerance in <i>Agrostis capillaris</i>	188
Exercise 7.14 Inbreeding and Homozygosity	189
Exercise 7.15 The Problem of Genetically Isolated Populations: Inbreeding in Lion and Black Rhinoceros	191
Exercise 7.16 Calculating Effective Population Size	193
Exercise 7.17 Charles Darwin: Careful Scientist or Clumsy Amateur Naturalist?	195
Exercise 7.18 Weight Distribution of Seeds and Natural Selection in the Horse Chestnut Tree	198
Chapter 8 Environmental Pollution and Perturbations	201
Introduction	202
<i>Pesticides in Food Chains</i>	203
<i>Water Pollution</i>	203
<i>Radioactivity</i>	203
<i>Toxicity</i>	203
<i>Pollution Monitoring, Bioindicators and Diversity Indices</i>	203
<i>Climate Change</i>	204
Reference	205
Exercise 8.1 The Biological Concentration of DDT Residues in Food Chains	205
Exercise 8.2 Pesticides and Eggshells	205
Exercise 8.3 The Toxicity of Pesticides and Herbicides	205
Exercise 8.4 Cultural Eutrophication	205
Exercise 8.5 Organic Pollution of Freshwater Ecosystems	205
Exercise 8.6 The Effects of Acid Rain on Invertebrate Diversity in Norwegian Lakes	205
Exercise 8.7 Dippers and Acid Rain	205
Exercise 8.8 Monitoring River Pollution Using Diversity Indices	205
Exercise 8.9 Thermal Pollution and Water Fleas	205
Exercise 8.10 Temperature Inversions and Air Pollution	205
Exercise 8.11 The Effect of Sulphur Dioxide on Growth in Ryegrass	205
Exercise 8.12 Trends in Greenhouse Gas Emissions in the United Kingdom	205

Exercise 8.13 Decay and Concentration of Radioisotopes	226
Exercise 8.14 The Hubbard Brook Study: Deforestation and Nutrient Loss	228
Exercise 8.15 Interactions Between Urbanisation, Forestry and Hydrology	230
Exercise 8.16 Lichens as Monitors of Air Pollution	231
Exercise 8.17 Feral Pigeons as Bioindicators of Lead Levels in the Environment	233
Exercise 8.18 Where has All the Ice Gone? Polar Bears and Climate Change	235
Chapter 9 Conservation Biology	237
Introduction	238
Conservation	238
<i>The Identification of Threatened and Endangered Species</i>	238
<i>In situ Versus Ex situ Conservation</i>	239
<i>Island Biogeography and Nature Reserve Design</i>	239
<i>Sport Hunting and Game Ranching</i>	239
Zoos	240
<i>Seed Banks and Frozen Zoos</i>	241
<i>Evolutionarily Significant Units</i>	241
<i>The Role of the Law</i>	241
References	242
Exercise 9.1 Counting Threatened Species: The IUCN Red List	243
Exercise 9.2 The Biology of the Giant Panda	244
Exercise 9.3 Conserving Tropical Plants: Why Bother?	246
Exercise 9.4 Gullypots: A Threat to Small Vertebrates	248
Exercise 9.5 Black Rhinoceros Poaching in Tanzania	249
Exercise 9.6 Conserving Fish Stocks by Mesh Regulation	252
Exercise 9.7 Game Ranching in Zimbabwe	254
Exercise 9.8 Use it or Lose it: Sport Hunting as Conservation	256
Exercise 9.9 How Does Shape Affect a Protected Area?	258
Exercise 9.10 Animal Reintroductions	260
Exercise 9.11 Causes of Manatee Mortalities in Florida	261
Exercise 9.12 The Conservation Role of Zoos	262
Exercise 9.13 Zoos and Evolutionarily Significant Units (ESUs)	264
Exercise 9.14 Returning Grey Wolves to Their Former Habitats in the USA	267
Exercise 9.15 Do Good Fences Make Good Neighbours? Are Wildlife Fences Part of the Problem or Part of the Solution?	271
Exercise 9.16 Ethics in Ecological Research and Ecosystem Management	272
Chapter 10 Statistics	275
Introduction	276
<i>Variables, Populations, and Samples</i>	276
<i>Descriptive Statistics</i>	277
<i>Inferential Statistics</i>	280
<i>Calculating Probabilities</i>	287
Reference	287
Exercise 10.1 Sewage Sludge Parasites	288
Exercise 10.2 Ozone Levels in a City	289
Exercise 10.3 Lead Pollution in Gulls	290
Exercise 10.4 Body Length and Mass in Humpback Whales	291

Exercise 10.5 Seals and Disease	292
Exercise 10.6 BOD and <i>Tubifex</i>	293
Exercise 10.7 Weather Measurements	294
Exercise 10.8 Lichen Diversity and Air Pollution	295
Chapter 11 Multiple Choice Questions	297
Chapter 12 Answers to Exercises and Multiple Choice Tests	329
Chapter 1 Biodiversity and Taxonomy	330
Chapter 2 Abiotic Factors and Ecophysiology	334
Chapter 3 Ecosystems, Energy and Nutrients	339
Chapter 4 Determining Abundance and Distribution	346
Chapter 5 Population Growth	353
Chapter 6 Species Interactions	358
Chapter 7 Behavioural Ecology and Ecological Genetics	363
Chapter 8 Environmental Pollution and Perturbations	370
Chapter 9 Conservation Biology	377
Chapter 10 Statistics	384
Answers to multiple choice questions	386
Glossary	387
Index	391
