<i>A Cautionary Note About Dynein Nomenclature</i>	xxx

Part I History and Evolution

1. Discovery of dynein and its properties: a personal account 5

Ian R. Gibbons

1.1 Introduction	5
1.2 Research at Harvard	9
1.3 Research at the University of Hawaii	20
1.4 Semiretirement in Berkeley	62
1.5 The pluses of working on a minus-end directed motor	76
Acknowledgments	77
References	77

2. Origins of cytoplasmic dynein 89

Richard B. Vallee

2.1 Early evidence for a potential cytoplasmic form of dynein	89
2.2 Microtubule-associated proteins	90
2.3 Cytoplasmic dynein as the retrograde transport factor	95
2.4 Implications for axonemal dyneins	96
2.5 Conclusions	97
Acknowledgments	97
References	97

3. The evolutionary biology of dyneins 101

Bill Wickstead

3.1 Introduction	101
3.2 Dynein evolution in eukaryotes	111
3.3 Evolution in the protoeukaryote	121

3.4 The origins of dynein	125
3.5 Summary	131
References	132

Part II Dyneins in Ciliary Biology

4. Cytoplasmic preassembly and trafficking of axonemal dyneins 141

Paurav B. Desai, Anudariya B. Dean and David R. Mitchell

4.1 Introduction	141
4.2 Cytoplasmic chaperones	145
4.3 Late cytoplasmic assembly/maturation	151
4.4 Transport of axonemal dyneins via intraflagellar transport	152
4.5 Docking complex	153
4.6 Conclusions	155
References	155

5. Composition and assembly of axonemal dyneins 163

Stephen M. King

5.1 Introduction	163
5.2 Classes of dynein components	164
5.3 Monomeric inner dynein arms	166
5.4 Dimeric inner dynein arm I1/f	166
5.5 Outer dynein arms	172
5.6 Interdynein linkers	175
5.7 Properties and organization of axonemal dynein motor units	176
5.8 Core WD-repeat intermediate chains associated with oligomeric motors	178
5.9 Additional intermediate chains	179
5.10 Core light chains associated with oligomeric motors	180
5.11 Regulatory components	184
5.12 Docking motors onto the axoneme	188
5.13 Other dynein-associated components	191
5.14 Conclusions	192
Acknowledgments	192
References	193

6. Organization of dyneins in the axoneme 203

Takashi Ishikawa

6.1 "9+2" structure	203
6.2 Loci of axonemal dyneins	204
6.3 Connection of dyneins and other components in cilia	208

6.4	Conformational changes of single dynein molecules during the power stroke	209
6.5	Behavior of dimeric dyneins	210
6.6	How bending occurs?	212
6.7	Asymmetric arrangement	213
6.8	Future developments	214
	Supplementary data	214
	Acknowledgments	215
	References	215
7.	Genetic approaches to axonemal dynein function in <i>Chlamydomonas</i> and other organisms	219
	<i>Toshiki Yagi and Ritsu Kamiya</i>	
7.1	Introduction	219
7.2	Genetic studies of <i>Chlamydomonas</i> axonemal dyneins	220
7.3	Genetic studies in various organisms	227
7.4	Conclusion and perspective	238
	References	239
8.	Regulatory mechanics of outer-arm dynein motors	251
	<i>Stephen M. King</i>	
8.1	Introduction	251
8.2	Mechanosensory control	251
8.3	Calcium control	257
8.4	Thioredoxins and the effects of redox poise	259
8.5	Phosphorylation and cyclic nucleotides	261
8.6	Lis1-dependent alterations in mechanochemistry	262
8.7	Interheavy chain interactions and effects of the intermediate chain/light chain complex	264
8.8	Integrating outer arm regulatory mechanisms	264
	Acknowledgment	265
	References	265
9.	Control of axonemal inner dynein arms	271
	<i>Juyeon Hwang, Emily L. Hunter, Winfield S. Sale and Maureen Wirschell</i>	
9.1	Overview	271
9.2	Organization and assembly of the inner dynein arms	274
9.3	Functional role of I1 dynein and dynein c	280
9.4	Regulation of I1 dynein	281
9.5	New questions	285
	References	287

10. Ciliary and flagellar motility and the nexin-dynein regulatory complex	299
<i>Mary E. Porter</i>	
10.1 Introduction	299
10.2 The central pair, radial spokes, and dynein regulatory complex	301
10.3 The dynein heavy chain suppressors	304
10.4 The dynein regulatory complex and the inner dynein arms	309
10.5 The dynein regulatory complex and nexin link	312
10.6 Identification and localization of dynein regulatory complex subunits within the nexin link	314
10.7 Identification of polypeptides that may interact with the nexin-dynein regulatory complex	320
10.8 Function of the DRC-nexin link in motility and future directions	321
Acknowledgments	324
References	324
11. Regulation of dynein-driven ciliary and flagellar movement	337
<i>Chikako Shingyoji</i>	
11.1 Introduction	337
11.2 Basic features of the components of cilia and flagella	340
11.3 Regulation of microtubule sliding in the axoneme	343
11.4 Sliding microtubule theory and bend formation	348
11.5 The mechanism of oscillation	351
11.6 Outlook	362
Acknowledgments	362
References	362
12. Dynein-mediated photobehavioral responses in <i>Chlamydomonas</i>	369
<i>Noriko Ueki and Ken-ichi Wakabayashi</i>	
12.1 Introduction: photobehavioral responses and the eyespot in <i>Chlamydomonas</i>	369
12.2 Flagellar behavior during phototaxis	374
12.3 Flagellar behavior during photoshock response	377
12.4 Photokinesis	379
12.5 Conclusion	381
Acknowledgments	381
References	381

13. Dynein and intraflagellar transport 387*George B. Witman and Yuqing Hou*

13.1 Introduction	387
13.2 Intraflagellar transport	389
13.3 Discovery of the cytoplasmic dynein 2 heavy chain and early proposals for its function	391
13.4 Identification of cytoplasmic dynein 2 as the retrograde intraflagellar transport motor	392
13.5 Structure and subunit content of cytoplasmic dynein 2	396
13.6 Variations on the theme: multiple dynein 2 HCs and a possible alternative dynein for retrograde IFT	412
13.7 Biological functions of cytoplasmic dynein 2 and retrograde intraflagellar transport	413
13.8 Cytoplasmic function of dynein 2	421
13.9 Regulation of dynein 2 expression, localization, and function	423
13.10 Conclusion	424
Acknowledgments	424
References	425

Part III Cytoplasmic Dynein Biology**14. Cytoplasmic dynein function defined by subunit composition 435***K. Kevin Pfister*

14.1 Introduction	435
14.2 Heavy chain (DYNC1H)	436
14.3 Light-intermediate chain (DYNC1LI)	437
14.4 Intermediate chain (DYNC1I)	438
14.5 DYNLL (LC8 light chain)	440
14.6 DYNLT (Tctex light chain)	441
14.7 DYNLRB (roadblock light chain)	442
14.8 Conclusion	443
Acknowledgment	443
References	443

15. Regulation of cytoplasmic dynein motility 451*Richard J. McKenney*

15.1 Introduction	451
15.2 Cytoplasmic dynein's allosteric regulatory systems	451
15.3 Dynactin	452
15.4 Dynein is autoinhibited	453

15.5	Dynactin relieves dynein's autoinhibition and activates processive directional motility	457
15.6	The role of the dynactin-microtubule interaction	459
15.7	Cargo-mediated licensing of dynein motor activity	461
15.8	Conclusion	462
	References	464
16.	Insights into cytoplasmic dynein function and regulation from fungal genetics	471
	<i>Xin Xiang</i>	
16.1	Introduction	471
16.2	Discoveries of dynein function in spindle orientation/nuclear migration	472
16.3	Identification of dynein regulators using fungal genetics	476
16.4	Dissecting the mechanism and function of the microtubule plus-end accumulation of cytoplasmic dynein	478
16.5	Understanding the functions of various components of the dynein and dynactin complexes	482
16.6	Identification of proteins required for dynein-cargo interaction	485
16.7	Conclusions	488
	Acknowledgments	489
	References	489
17.	Role of dynactin in dynein-mediated motility	503
	<i>Stephanie A. Ketcham and Trina A. Schroer</i>	
17.1	Dynactin: three structural domains with distinct functions	503
17.2	Teasing out interactions among dynactins, microtubules, and dyneins	506
17.3	Mechanism of dynein activation	508
17.4	Dynactin pointed-end complex subunits govern dynein-cargo binding	510
	References	512
18.	Role of cytoplasmic dynein and dynactin in mitotic checkpoint silencing	517
	<i>Cody W. Lewis and Gordon K. Chan</i>	
18.1	Kinetochore	517
18.2	Kinetochore-microtubule attachment and error correction	518
18.3	The mitotic checkpoint	519
18.4	Mitotic checkpoint silencing	520
18.5	Dynein/dynactin and Spindly	521
18.6	Dynein/dynactin-mediated shedding of kinetochore mitotic checkpoint proteins	522

18.7 Outstanding questions	524
Acknowledgments	526
References	526
19. Cytoplasmic dynein during mitosis	535
<i>Edward H. Hinchcliffe and Kevin T. Vaughan</i>	
19.1 Introduction	535
19.2 Model systems of mitotic dynein	536
19.3 Dynein at the nuclear envelope	538
19.4 Spindle pole dynein	538
19.5 Cortical dynein	541
19.6 Kinetochore dynein	542
19.7 Phosphorylation	547
19.8 Future questions	548
19.9 Conclusions	548
References	548
20. Dynein and dynactin at microtubule plus ends	557
<i>Rupam Jha and Thomas Surrey</i>	
20.1 Introduction	557
20.2 Growing microtubule plus end accumulation of dynein and dynactin	557
20.3 Future perspectives	563
Acknowledgments	564
References	564
21. Drosophila cytoplasmic dynein: mutations, tools, and developmental functions	569
<i>Amanda L. Neisch, Adam W. Avery, Min-Gang Li and Thomas S. Hays</i>	
21.1 Introduction	569
21.2 Drosophila dynein genes and mutations	574
21.3 Drosophila as a model system: tools and advantages	576
21.4 Dynein function in gametogenesis	580
21.5 Dynein function in embryogenesis	590
21.6 Dynein function in neurons	600
21.7 Conclusion	610
Acknowledgments	611

A Cautionary Note About Dynein Nomenclature

xxxix

Part I Structure and Mechanics of Dynein Motors

1. Electron microscopy of isolated dynein complexes and the power stroke mechanism	3
<i>Kazuhiro Oiwa, Hitoshi Sakakibara and Ken'ya Furuta</i>	
1.1 Introduction	3
1.2 Historical background of dyneins	6
1.3 Electron microscopic techniques used in recent dynein research	12
1.4 Properties of dynein molecules revealed by advanced electron microscopic techniques	15
1.5 Force generating mechanism of dynein	23
References	30
2. Mechanism and regulation of dynein motors	37
<i>Helgo Schmidt and Andrew P. Carter</i>	
2.1 Overall architecture of the dynein motor	37
2.2 The mechanochemical cycle of the dynein motor	38
2.3 Conformational changes in the AAA+ ring drive the mechanochemical cycle	39
2.4 The remodeling of the linker during the mechanochemical cycle	41
2.5 ATP hydrolysis primes the dynein motor for microtubule rebinding and the linker power stroke	42
2.6 Variations of the dynein mechanochemical cycle	43
2.7 How dynein motors walk along the microtubule	43
2.8 Determinants of dynein directionality	46
2.9 Dynein motor activation by cargo binding	47
2.10 Conclusions	48
References	49

3. Structural analysis of dynein intermediate and light chains	53
<i>John C. Williams, Amanda E. Siglin, Christine M. Lightcap and Amrita Dawn</i>	
3.1 Introduction	53
3.2 Abbreviated background of light chains	57
3.3 Structure of the apo light chains	59
3.4 Structure of liganded light chains	61
3.5 LC8 and TcTex-1 promiscuity	65
3.6 Light chain isoforms	67
3.7 Mammalian dynein intermediate chains	69
3.8 Molecular model of the light-intermediate chain structure	71
3.9 Light chains and cargo	72
3.10 Posttranslational modifications	73
3.11 The role of LC8 and TcTex-1 on dynein	74
3.12 Summary	77
References	77
4. Biochemical purification of axonemal and cytoplasmic dyneins	89
<i>Kazuo Inaba</i>	
4.1 Introduction	89
4.2 Axonemal dyneins	90
4.3 Cytoplasmic dynein	99
4.4 Storage of dynein	103
4.5 Conclusion and perspective	103
Acknowledgments	104
References	104
5. Single-molecule dynein motor mechanics in vitro	113
<i>Ahmet Yildiz</i>	
5.1 Introduction	113
5.2 The mechanochemical cycle of dynein	113
5.3 Processivity of a dynein dimer	115
5.4 Velocity of dynein motors	116
5.5 The stepping mechanism	117
5.6 Stepping pattern of the two motor domains	119
5.7 The role of the AAA sites in dynein motility	121
5.8 Force generation	123
5.9 The mechanism of minus end directionality	125
5.10 Mammalian dynein/dynactin complex	126

5.11	Future directions	128
	Acknowledgments	129
	References	129
6.	Biophysical properties of dynein in vivo	137
	<i>George T. Shubeita, Babu J.N. Reddy and Steven P. Gross</i>	
6.1	Motility and regulation of dynein in vitro	137
6.2	Biophysical function of dynein in vivo	139
6.3	Regulation of dynein motility in vivo	143
	References	147
7.	Mechanics of bidirectional cargo transport	153
	<i>William O. Hancock</i>	
7.1	Introduction	153
7.2	Experimental and computational work to date on bidirectional transport	154
7.3	Models of bidirectional transport	155
7.4	Kinesins involved in bidirectional transport	158
7.5	Dynein properties relevant to bidirectional transport	160
7.6	Roles of MAPs and tubulin PTMs in bidirectional transport	161
7.7	Potential effects of membrane fluidity on bidirectional transport	162
7.8	Concluding thoughts	164
	References	164
8.	Chemical probes for dynein	173
	<i>Jonathan B. Steinman and Tarun M. Kapoor</i>	
8.1	General approach to inhibiting dynein	174
8.2	Nucleotide-mimetic inhibitors of dynein	176
8.3	Ciliobrevins: cell-permeable small molecule dynein inhibitors	178
8.4	Other approaches that allow fast temporal control over dynein function	183
	Acknowledgments	187
	References	187
9.	Computational modeling of dynein activity and the generation of flagellar beating waveforms	193
	<i>Veikko F. Geyer, Pablo Sartori, Frank Jülicher and Jonathon Howard</i>	
9.1	Introduction	193
9.2	Models for beat control in the flagellum	194
9.3	Theory	196
9.4	Discussion	207

A.1 Coefficient equations for the boundary value problem	210
A.2 Parameter normalizations	211
References	211

Part II Dynein Dysfunction and Disease

10. Impacts of virus-mediated manipulation of host Dynein 215

Miroslav P. Milev, Xiaojian Yao, Lionel Berthoux and Andrew J. Mouland

10.1 Dynein and viral replication	215
10.2 Kinesins	216
10.3 Innate immunity, the Rabs, Rab7-interacting lysosomal protein, and vesicular transport	217
10.4 Dynein, viruses, and the innate immune response	221
10.5 IFITM3 and VAP-A	222
10.6 Dyneins and nuclear integration of viral DNA	224
10.7 Posttranslationally modified microtubules and Dynein	225
10.8 Emerging viruses and co-opting of Dynein	225
Major outstanding questions	226
Acknowledgments	226
References	226

11. The use of mouse models to probe cytoplasmic dynein function 235

Marco Terenzio, Sandip Koley, Elizabeth M.C. Fisher and Mike Fainzilber

11.1 The rationale behind using a genetic approach to study the dynein complex	235
11.2 Different approaches for mouse genetic studies	240
11.3 An allelic series of mutations in the cytoplasmic dynein heavy chain gene, <i>Dync1h1</i>	243
11.4 <i>DYNC1H1</i> mutations in humans	249
11.5 Dynein light chain and intermediate chain mutants	251
11.6 Dynactin mutant mice	254
11.7 Conclusions	255
Acknowledgments	255
References	256

12. Cytoplasmic dynein and its regulators in neocortical development and disease 263

David J. Doobin and Richard B. Vallee

12.1 Neocortical development	263
12.2 The role of dynein in radial glia progenitors and interkinetic nuclear migration	267

12.3	Roles for the dynein pathway in postmitotic neuronal precursors	269
12.4	Overview of malformations of cortical development associated with dynein mutations	271
12.5	Lissencephaly associated with <i>LIS1</i> mutations	272
12.6	Malformations of cortical development associated with <i>DYNC1H1</i> mutations	273
12.7	<i>NDE1</i> mutations and the pathogenesis of severe microcephaly	275
12.8	Summary	278
	Acknowledgments	278
	References	279
13.	Cytoplasmic dynein dysfunction and neurodegenerative disease	287
	<i>Armen J. Moughamian and Erika L.F. Holzbaur</i>	
13.1	Introduction	287
13.2	Cytoplasmic dynein function in neurons	288
13.3	Dynein dysfunction in mice	294
13.4	Mutations in dynein and in dynein effectors result in a spectrum of neurodevelopmental and neurodegenerative disease in humans	297
13.5	Dynein dysfunction in the pathogenesis of neurodegenerative disease: ALS, HD, and PD	303
13.6	Conclusions	306
	References	307
14.	Dynein dysfunction as a cause of primary ciliary dyskinesia and other ciliopathies	317
	<i>Niki T. Loges and Heymut Omran</i>	
14.1	Introduction	317
14.2	Ultrastructure of motile cilia	318
14.3	Outer dynein arms	319
14.4	Inner dynein arms	322
14.5	Ciliopathies	323
14.6	Nodal cilia	325
14.7	Ependymal cilia and hydrocephalus	327
14.8	Sperm flagella and male infertility	328
14.9	Fallopian tubes and female infertility	328
14.10	Primary cilia dyskinesia	328
14.11	Molecular defects affecting outer dynein arm components and docking	329

14.12	Molecular defects affecting cytoplasmic preassembly of dynein arms	334
14.13	Preassembly defects of ODA complex type-2 and DNALI1-associated IDA complexes	334
14.14	Preassembly defects of ODA type-1 and type-2 and DNALI1-associated IDA complexes	336
14.15	Molecular defects affecting the 96-nm axonemal ruler	338
14.16	Molecular defects affecting the nexin-dynein regulatory complex	339
14.17	Molecular defects affecting ciliary beat regulation	341
	References	343
15.	Severe skeletal abnormalities caused by defects in retrograde intraflagellar transport dyneins	357
	<i>Miriam Schmidts and Hannah M. Mitchison</i>	
15.1	Introduction	357
15.2	Role of cilia in skeletal development	359
15.3	Clinical features of skeletal ciliopathies	360
15.4	Cell biological basis of skeletal ciliopathies due to IFT defects	369
15.5	Genetic basis of dynein-based skeletal ciliopathies associated with IFT defects	371
15.6	Human mutations in cytoplasmic IFT dynein-2 genes	374
15.7	Future perspective on clinical spectrum, new clinical models, and therapy	386
	Acknowledgments	388
	References	388
16.	Ciliary dynein dysfunction caused by chronic alcohol exposure	403
	<i>Michael Price, Fan Yang, Joseph H. Sisson and Maureen Wirschell</i>	
16.1	Overview	403
16.2	Alcohol and mucociliary function	404
16.3	Alcohol and <i>Chlamydomonas</i> flagella	409
16.4	New questions and future directions	412
	References	413
17.	Dynein-based motility of pathogenic protozoa	419
	<i>Simon Imhof and Kent L. Hill</i>	
17.1	Introduction: impact of flagellated protozoan parasites on human health and agriculture	419
17.2	Biology and mechanism of flagellar motility in parasite infections	421

Contents

17.3 Final remarks	430
Supplementary data	431
Acknowledgments	431
References	431
