

Contents

Introduction

ix

Section I

How Life Started

1

1. The Physics and Chemistry of Planet Earth

3

The Expanding Universe

3

Birth of the Solar System

4

Birth of Planet Earth

6

The Geology and Chemistry of Planet Earth

8

References

10

2. How Life Started

11

References

17

3. RNA, Ribozymes, and Early Life Forms

19

References

22

4. Amino Acids and Peptides, Essential Ingredients of Life

25

References

27

5. Biochemistry of Early Life

29

References

34

6. Evolutionary History of Planet Earth

37

Oxygen Atmosphere

37

Prokaryotic and Eukaryotic Cells

37

Multicellular Organisms

42

References

42

7. What Is Life?

45

References

47

Section II	
DNA and RNA	49
8. The Evolution of DNA and the Genetic Code	51
Evolution of DNA	51
Evolution of the Genetic Code	52
References	54
Further Reading	54
9. DNA Biology: DNA Replication, Transcription, and Translation	55
Replication	58
Transcription	59
mRNA Splicing	60
Translation of mRNA	61
Genes and Chromosomes	62
Further Reading	62
Section III	
Energetics	63
10. Adenosine Triphosphate Energetics	65
Oxidative Phosphorylation	66
Feeding Pathways to Oxidative Phosphorylation	68
Use of Adenosine Triphosphate Energy	71
Adenosine Triphosphate and the Heart	72
Photosynthesis and the Generation of Oxygen and Adenosine Triphosphate	74
Cytoplasmic Membrane Electron Transport and Adenosine Triphosphate Synthesis in Bacteria	75
Evolution of Energetics	76
Energetics and Life	77
References	77
11. Adenosine Triphosphate Synthase	79
Further Reading	82
Section IV	
4.5 Billion Years Evolution	83
12. Evolution Timeline	85
Further Reading	92
13. Evolution of Chemical, Prokaryotic, and Eukaryotic Life	93
Chemical Life	93
Prokaryotic Life	93

Eukaryote Evolution From Prokaryotes	96
Eukaryotic Life	97
Further Reading	99
14. Animal Evolution, Small Brain and Advanced Brain	101
Animal and Mammal Evolution	101
Small Brain Animals	101
Advanced Brain Animals	103
Further Reading	104
15. The Evolution of Humans	105
The Human Brain	107
Bipedalism	113
References	115
16. Human Development	119
Language	119
Human Pseudoevolution	123
References	124
Section V	
Human Development	125
17. Human Female Oogenesis	127
Oogenesis	127
Ovulation	130
Luteogenesis	131
References	133
Further Reading	133
18. Human Male Spermatogenesis	135
Mitotic Proliferation	135
Meiotic Division	135
Cytodifferentiation and Packaging of Sperm Cells	136
Endocrine Control of Spermatogenesis	139
Maturation of Spermatozoa	139
Seminal Fluids	140
Further Reading	141
19. Sperm Activation, Fertilization, Morula, Blastocyst Formation, and Twinning	143
Sperm Activation	143
Spermatozoa Capacitation	143

	Spermatozoa Acrosome Reaction	145
	Ovum Propulsion	145
	Fertilization	146
	Morula and Blastocyst Formation	147
	Twinning	148
	Further Reading	150
20.	Multiple Human Chorionic Gonadotropin Molecules	151
	Five or Six Completely Independent hCG Molecules	151
	References	155
21.	Implantation and Pregnancy Failure	157
	Implantation	157
	Pregnancy Failure	158
	References	161
22.	Hemochorial Placentation	163
	References	166
23.	Human Life, Development of the Human Brain	167
	References	171
	Further Reading	171
24.	Human Life	173
	Index	177
