

CONTENTS

<i>Contributors</i>	xiii
<i>Preface</i>	xix
1. Protein CysteinyI-S-Nitrosylation: Analysis and Quantification	1
J.E. Wiktorowicz, S.J. Stafford, and N.J. Garg	
1. Introduction	1
2. SNOFlo Methodology	3
3. Applications	10
References	13
2. Quantitative Proteomics of the <i>E. coli</i> Membranome	15
K.C. Tsolis and A. Economou	
1. Introduction—Pipeline Overview	16
2. Sample Preparation	17
3. Peptide/Protein Identification	24
4. Quantification	26
5. Functional Annotation	32
6. Conclusion	33
Acknowledgments	33
References	34
3. Comparative Analysis and Validation of Different Steps in Glycomics Studies	37
I. Trbojević-Akmačić, I. Ugrina, and G. Lauc	
1. Introduction	38
2. Experimental Design and Randomization	39
3. Sample Preparation for UPLC <i>N</i> -Glycan Analysis	40
4. Robustness of the Sample Preparation Method	44
5. Analysis of Sources of Variation	45
6. Method Validation (Between-Day and Between-Analyst Variation)	46
7. UPLC Analysis of 2-AB-Labeled <i>N</i> -Glycans	48
8. Data Analysis and Quality Control	51
9. Summary and Conclusions	54
Acknowledgments	54
References	54

4. Analysis of Translocation-Competent Secretory Proteins by HDX-MS	57
A. Tsirigotaki, M. Papanastasiou, M.B. Trelle, T.J.D. Jørgensen, and A. Economou	
1. Introduction	58
2. Preparation of Polypeptides	62
3. Isotope Labeling	67
4. Mass Spectrometric Analysis	70
5. Data Visualization and Interpretation	74
6. Identifying Statistically Significant Conformational Differences in Comparative Local HDX-MS	77
7. Conclusions	78
Acknowledgments	80
References	80
5. Site-Specific Quantification of Lysine Acetylation Using Isotopic Labeling	85
M. Miyagi	
1. Introduction	86
2. Principle of Site-Specific Quantification of Lysine Acetylation Using Isotopic Labeling	89
3. Experimental Procedures	90
4. Conclusion	94
References	94
6. Posttranslational Modifications and Plant-Environment Interaction	97
A. Hashiguchi and S. Komatsu	
1. Introduction	98
2. Phosphorylation-Dependent Signal Transduction	99
3. Glycosylation and Protein Transport	102
4. Ubiquitination and Sumoylation-Dependent Protein Regulation	104
5. Role of Oxidative Modifications in Energy Production	105
6. Acetylation and Plant Immune Response	106
7. Posttranslational Modifications and Protein-Protein Interaction	108
8. Conclusion	109
References	109

7. Identification of Posttranslational Modifications of Endogenous Chromatin Proteins From Testicular Cells by Mass Spectrometry	115
N. Gupta, S. Pentakota, L.N. Mishra, R. Jones, and M.R.S. Rao	
1. Introduction	116
2. Isolation of Different Stages of Rat Testicular Germ Cells	118
3. Extraction of Nuclear Basic Proteins	121
4. Purification of Chromatin Proteins by RP-HPLC	123
5. Mass Spectrometry Analysis	124
6. Future Perspectives and Challenges	139
7. Biological Implications in Spermatogenesis	140
Acknowledgments	140
References	140
8. Quantitative Analysis of Yeast Checkpoint Protein Kinase Activity by Combined Mass Spectrometry Enzyme Assays	143
N.C. Hoch, E.S.-W. Chen, M.-D. Tsai, and J. Heierhorst	
1. Introduction	144
2. Established Methods to Monitor Rad53 Activation	145
3. A Direct Quantitative Immunoprecipitation Kinase Activity Assay for Endogenous Rad53	148
4. Mass Spectrometric Analysis of Rad53 Autophosphorylation	155
5. Conclusions	162
References	162
9. Retrieving Quantitative Information of Histone PTMs by Mass Spectrometry	165
C. Zhang and Y. Liu	
1. Introduction	166
2. MS-Based Proteomics	168
3. Analysis of Histone Modifications: Methods and Strategies	172
4. Clinical Applications	183
5. Conclusion	186
References	186
10. Evaluating Exosome Protein Content Changes Induced by Virus Activity Using SILAC Labeling and LC-MS/MS	193
X. Zhao, Y. Xie, and J. Liu	
1. Introduction	194
2. Experimental Design	196

3. Detailed Protocol	199
4. Conclusions	207
References	207
11. Exoproteomics of Pathogens: Analysis of Toxins and Other Virulence Factors by Proteomics	211
J. Armengaud and C. Duport	
1. Introduction	212
2. Exoproteome Sample Preparation and Fractionation	214
3. Shotgun Mass Spectrometry for Discovery of Toxins and Other Virulence Factors	217
4. Data Interpretation	219
5. Examples of Specific Applications	222
6. Conclusion	224
References	224
12. Integrated and Quantitative Proteomics of Human Tumors	229
Y. Yakkloui, Y. Temel, E. Chevet, and L. Negroni	
1. Introduction	230
2. Equipment, Material, and Buffers	233
3. Wet Lab Protocol	234
4. Dry Lab Protocol	236
5. An Example	238
6. Conclusion	244
Acknowledgments	244
References	245
13. Mass Spectrometry-Based Analysis for the Discovery and Validation of Potential Colorectal Cancer Stool Biomarkers	247
C.S. Ang, M.S. Baker, and E.C. Nice	
1. Introduction	248
2. Proteomics: From Discovery to Translation	251
3. Sample Preparation	252
4. Proteomic Discovery Protocols	254
5. Protein Quantitation Protocols	262
6. Future Directions	271
References	272

14. Mass Spectrometry-Based Methodology for Identification of Native Histone Variant Modifications From Mammalian Tissues and Solid Tumors	275
A.G. Nuccio, M. Bui, Y. Dalal, and A. Nita-Lazar	
1. Introduction	276
2. Mass Spectrometry-Based Methods Overview	277
3. Protocol	278
4. Notes	287
5. Concluding Remarks	288
Acknowledgments	288
References	288
15. Drug Target Identification Using an iTRAQ-Based Quantitative Chemical Proteomics Approach—Based on a Target Profiling Study of Andrographolide	291
J. Wang, Y.K. Wong, J. Zhang, Y.-M. Lee, Z.-C. Hua, H.-M. Shen, and Q. Lin	
1. Introduction and General Principles	292
2. Materials, Equipment, and Solutions	294
3. Protocol	297
4. Discussion	305
Acknowledgments	307
References	307
16. A Super-SILAC Strategy for the Accurate and Multiplexed Profiling of Histone Posttranslational Modifications	311
R. Nuberini and T. Bonaldi	
1. Introduction	312
2. Overview of the Method	314
3. Material	316
4. Methods	320
5. Conclusions	329
Acknowledgments	330
References	330
17. A Comparison of Two-Hybrid Approaches for Detecting Protein-Protein Interactions	333
J. Mehla, J.H. Caufield, N. Sakhawalkar, and P. Uetz	
1. Introduction	334
2. The Bacterial Two-Hybrid System	335

3. The Yeast Two-Hybrid System	343
4. Comparison of Yeast and Bacterial Two-Hybrid Methods	351
5. Conclusion	357
References	357
18. Recent Achievements in Characterizing the Histone Code and Approaches to Integrating Epigenomics and Systems Biology	359
K.A. Janssen, S. Sidoli, and B.A. Garcia	
1. Introduction	360
2. Sample Preparation	362
3. MS-Based Strategies for Histone Analysis	364
4. Future Perspective/Outlook	372
Acknowledgments	374
References	374
19. Rapid Proteomics to Prospect and Validate Novel Bacterial Metabolism Induced by Environmental Burden	379
C.L. Yu, S. Brooks, Y. Li, M. Subramanian, R. Summers, and M. Pope	
1. Introduction	380
2. Method Summary	387
3. Stable Isotope Dimethyl-Labeling Protocol	390
4. Applications	399
5. Conclusion	408
Acknowledgments	409
References	409
20. Quantitation of Human Metallothionein Isoforms in Cells, Tissues, and Cerebrospinal Fluid by Mass Spectrometry	413
J.B. Shabb, W.W. Muhonen, and A.A. Mehus	
1. Introduction	414
2. Methodology	416
3. Conclusions	427
Acknowledgments	429
References	429

21. A Cautionary Tale on the Inclusion of Variable Posttranslational Modifications in Database-Dependent Searches of Mass Spectrometry Data	433
J. Svozil and K. Baerenfaller	
1. Introduction	434
2. Scores and Thresholds	435
3. The Power of Calculating False Discovery Rates	436
4. The Advantages and Disadvantages of Including Some Common Posttranslational Modifications as Variable Modifications in Database-Dependent Searches	438
5. The Special Case of the GlyGly Modification	446
6. Conclusions	449
Acknowledgments	450
References	450
22. Kinase Assay-Linked Phosphoproteomics: Discovery of Direct Kinase Substrates	453
J.V. Arrington, C.-C. Hsu, and W.A. Tao	
1. Introduction	454
2. Overview of Kinase Substrate Identification Methods	455
3. Kinase Assay-Linked Phosphoproteomics Approach	458
4. Conclusions	467
5. Materials	467
Acknowledgments	468
References	468
Author Index	473
Subject Index	503
