Preface

xi

1. Deuterostomes and Chordates

1.1 A Brief Background	1
1.2 Deuterostomes and Chordates	2
1.2.1 Deuterostomes	3
1.2.2 Ambulacraria	3
1.2.3 Chordates	4
1.2.4 Olfactores	5
1.3 Deuterostome Phyla	5
1.3.1 Echinoderms	5
1.3.2 Hemichordates	7
1.3.3 Cephalochordates	10
1.3.4 Urochordates (Tunicates)	12
1.3.5 Vertebrates	15
1.4 Conclusions	16

2. Hypotheses on Chordate Origins

2.1 The Annelid Theory	19
2.2 The Auricularia Hypothesis	19
2.3 The Calcichordate Hypothesis	21
2.4 The Pedomorphosis Scenario: Was the Ancestor Sessile or Free-Living?	23
2.5 The New Inversion Hypothesis	26
2.6 The Enteropneust Hypothesis	27
2.6.1 A New Enteropneust Hypothesis	27
2.7 The Aboral-Dorsalization Hypothesis	28
2.8 Conclusions	30

3. Fossil Records

3.1 The Cambrian and Ediacaran Periods	31
3.2 Crown, Stem, and Total Groups	34
3.3 Fossil Records of Invertebrate Deuterostomes	35

3.3.1	Echinoderms	35
3.3.2	Hemichordates	38
3.3.3	Cephalochordates	38
3.3.4	Urochordates (Tunicates)	39
3.4	Fossil Records of Vertebrates	40
3.4.1	Cyclostome-Like Fossils	42
3.4.2	Early Vertebrate Fossils	42
3.4.3	Conodont Elements	42
3.5	Conclusions	43
4.	Molecular Phylogeny	
4.1	Molecular Phylogeny of Metazoans	46
4.2	Molecular Phylogeny of Deuterostome Taxa	47
4.2.1	Ambulacraria and Chordata: Two Major Groups of Deuterostomes	47
4.2.2	Cephalochordates Came First Among Chordates and Then Urochordates + Vertebrates as Olfactores	47
4.2.3	Timing of the Emergence of Deuterostome Groups	51
4.3	Relationships Within Each Deuterostome Phylum	52
4.3.1	Echinoderms	52
4.3.2	Hemichordates	52
4.3.3	Cephalochordates	53
4.3.4	Urochordates (Tunicates)	53
4.3.5	Vertebrates	54
4.4	Xenacoelomorpha	54
4.5	MicroRNAs	56
4.6	Conclusions	58
5.	Comparative Genomics of Deuterostomes	
5.1	Genome Decoding	59
5.2	Genomic Features of Five Representative Deuterostome Taxa	60
5.2.1	Echinoderm Genomes	60
5.2.2	Hemichordate Genomes	63
5.2.3	Cephalochordate Genome	66
5.2.4	Urochordate Genomes	67
5.2.5	Vertebrate Genomes	68
5.3	Gene Families in Deuterostomes and the Ancestral Gene Set	70
5.3.1	Gene Families in Deuterostomes	71
5.3.2	Expansion of Gene Families in Deuterostomes	71
5.4	Exon-Intron Structures	73
5.5	Synteny	75
5.5.1	Macrosynteny	75
5.5.2	Microsynteny	76
5.6	Conserved Noncoding Sequences	76
5.7	Repetitive Elements	78
5.8	Taxonomically Restricted Genes	78
5.9	Conclusions	78

6. The Origins of Chordates	
6.1 Evaluation of Hypotheses for Chordate Origins	81
6.1.1 How Do We Interpret Deuterostome Evolution?	81
6.1.2 The Chordate Ancestor Was Free-Living	83
6.1.3 The Auricularia Hypothesis Is Not Supported	83
6.1.4 The Calcichordate Hypothesis Cannot Be Accepted	84
6.1.5 The Annelid Hypothesis Is Not Related to the Origins of Chordates	84
6.1.6 The Enteropneust Hypothesis and Inversion Hypothesis Need Reconsideration	85
6.2 The Pharyngeal Gene Cluster and the Origin of Deuterostomes	85
6.3 Hox and Chordate Evolution	89
6.3.1 Ambulacrarian Hox Genes	91
6.3.2 Cephalochordate Hox Genes	91
6.3.3 Urochordate Hox Genes	92
6.3.4 Vertebrate Hox Genes	92
6.3.5 Deuterostome Posterior Hox Genes: An Unsolved Origin	94
6.4 ParaHox Genes	94
6.5 Conclusions	95
7. The New Organizers Hypothesis for Chordate Origins	
7.1 Chordate Features	97
7.2 The New Organizers Hypothesis of Chordate Origins	99
7.3 Cephalochordate Embryogenesis: Primitive Chordate Body-Plan Formation	100
7.4 Chordate Features and Molecular Developmental Mechanisms	103
7.5 The Notochord: A Mesodermal Novelty	103
7.5.1 Brachyury: A Key Transcription Factor for Notochord Formation	105
7.5.2 Regulatory Networks of <i>Brachyury</i>	106
7.6 Somites (Myotomes): A Mesodermal Novelty	109
7.7 The Postanal Tail: A Mesodermal Novelty	111
7.8 The Dorsal Central Nervous System: An Ectodermal Novelty	113
7.8.1 The Gene Regulatory Network for Neural Development	113
7.8.2 Regionalization of the Central Nervous System	116
7.9 Hatschek's Pit: An Ectodermal Novelty	116
7.10 The Endostyle: An Endodermal Novelty	118
7.11 Conclusions	120
8. The Dorsoventral-Axis Inversion Hypothesis: The Embryogenetic Basis for the Appearance of Chordates	
8.1 Spemann's Organizer, the Nieuwkoop Center, and the Three-Signal Model	122
8.1.1 Spemann's Organizer	124
8.1.2 The Nieuwkoop Center	124
8.1.3 The Three-Signal Model	124

8.2	Axial Patterning of Deuterostome Body Plans	125
8.2.1	The Animal-Vegetal Axis and Formation of Endomesoderm	125
8.2.2	The Anteroposterior Axis	126
8.2.3	The Dorsoventral Dimension and the Inversion Hypothesis	126
8.2.4	Left-Right Asymmetry and the Nodal Signal	127
8.3	Interpretation of the Dorsoventral-Axis Inversion Hypothesis	130
8.3.1	Nodal Function in Mesoderm Formation	131
8.3.2	Interpretation of the Dorsoventral-Axis Inversion	131
8.4	Conclusions	133
9.	The Enteropneust Hypothesis and Its Interpretation	
9.1	The Stomochord and Other Organs Proposed as Antecedents to the Notochord	136
9.1.1	The Stomochord	136
9.1.2	The Pygochord	136
9.1.3	The Annelid Axochord	138
9.2	The Nervous System of Enteropneusts	139
9.2.1	The Dorsal Collar Cord	139
9.2.2	Gene Expression Profiles in Epidermis along the Anteroposterior Axis	140
9.2.3	Gene Expression Profiles along the DV Axis	140
9.3	The Spemann's Organizer-Like System in Hemichordates	140
9.4	Interpretations of the Enteropneust Hypothesis	141
9.5	Conclusions	142
10.	Chordate Evolution: An Extension of the New Organizers Hypothesis	
10.1	Evolution of Vertebrates	144
10.1.1	Neural Crest	144
10.1.2	The Placodes	147
10.1.3	The Cardiopharyngeal Field	149
10.1.4	Cartilage and Bone	152
10.1.5	Adaptive Immune System	153
10.2	Evolution of Urochordates	154
10.2.1	Precocious Mode of Embryonic Development	154
10.2.2	Asexual Reproduction of Colonial Ascidians	154
10.2.3	Pluripotent Stem-Like Cells for Bud Formation	155
10.2.4	The Development of Colony Specificity	156
10.3	Conclusion	156
11.	How Did Chordates Originate and Evolve?	
11.1	The Three-Phylum System of Chordates	157
11.2	Mechanisms Involved in Origination of Deuterostome Novelties	159

11.3	Horizontal Gene Transfer	159
11.3.1	Acquisition of Cellulose Biosynthetic Ability and Urochordate Evolution	160
11.3.2	Genes Encoding Enzymes Involved in Sialic Acid Metabolism	163
11.4	The Significance of Gene Duplication in Deuterostome Evolution	164
11.5	Significance of Domain Shuffling in Chordate Evolution	167
11.6	The Significance of Structural Genes in Metazoan Evolution	167
11.7	The Phylotypic Stage	168
11.8	Conclusions	170
12.	Summary and Perspective	
12.1	Summary	171
12.2	Perspective	174
	References	177
	Index	201
