Part I Fungi

1. Yeasts

G.M. Walker

Defining Statement	3
Definition and Classification of Yeasts	3
Definition and Characterization of Yeasts	3
Yeast Taxonomy	3
Yeast Biodiversity	4
Yeast Ecology	4
Natural Habitats of Yeast Communities	4
Yeasts in the Food Chain	4
Microbial Ecology of Yeasts	5
Yeast Cell Structure	5
General Cellular Characteristics	5
Methods in Yeast Cytology	5
Subcellular Yeast Architecture and Function	6
Nutrition, Metabolism, and Growth of Yeasts	6
Nutritional and Physical Requirements for Yeast Growth	6
Carbon Metabolism by Yeasts	8
Nitrogen Metabolism by Yeasts	9
Yeast Growth	10
Yeast Genetics	12
Life Cycle of Yeasts	12
Genetic Manipulation of Yeasts	12
Yeast Genome and Proteome Projects	13
Industrial, Agricultural, and Medical Importance of Yeasts	14
Industrial Significance of Yeasts	14
Yeasts of Environmental and Agricultural Significance	16
Medical Significance of Yeasts	16
Overview of Recent Progress in Yeast Science and Technology	16
Further Reading	17

2. *Aspergillus*

C. Scazzocchio

Defining Statement	19
Note	19
What is <i>Aspergillus</i> ?	19
Food Contamination by <i>Aspergilli</i>	21
<i>Aspergillus</i> as Pathogens	21
<i>Aspergillus</i> as Human Pathogens	21
<i>Aspergillus</i> in Veterinary Medicine	24
<i>A. sydowii</i> , a Specific Pathogen for Gorgonian Corals	24
Useful <i>Aspergilli</i>	25
Oriental Food Uses of <i>Aspergillus</i>	25
Extracellular Enzymes Produced by <i>Aspergilli</i> :	
<i>Aspergilli</i> as Hosts for Recombinant Proteins	25
<i>Aspergillus</i> and Production of Organic Acids	26
Medically Useful Secondary Metabolites	26
<i>A. (Emericella) nidulans</i> as a Model Organism	26
The <i>A. nidulans</i> Genetic System	26
The Mitochondrial DNA of <i>A. nidulans</i>	27
<i>A. nidulans</i> as a Model for Genetic Metabolic Diseases	28
Control of Gene Expression	29
<i>A. nidulans</i> as a Model for Cell Biology	33
<i>A. nidulans</i> Developmental Pathways	35
The Genus <i>Aspergillus</i> in the Genomic Era	38
Further Reading	39

3. Clavicipitaceae

M.S. Torres and J.F. White

Defining Statement	41
Introduction	41
Free-Living Saprotrophs and Insect Parasites	41
Species on Soft-Bodied Scale Insects	43
Plant Biotrophs	43
Chemical Diversity in the Clavicipitaceae	45
Biological Activities of Secondary Metabolites	46
Economic, Agricultural, and Ecological Importance of Clavicipitaceous Endophytes	47
Origin and Evolution of Ergot Alkaloids	47

The Proposal of Functionality for Ergot Alkaloids	47	Bioactive Compounds	63
The Evidence for Defensive Mutualism in the Clavicipitaceae Endophyte/Grass Association	47	New Characterization Methods in the Study of Endophytes	63
The Defensive Mutualism Controversy: A Debate Regarding Function	48	Conclusion	64
Evolution of Defensive Mutualism from Self-Defense to Host Defense	48	Acknowledgment	64
Conclusion	48	Further Reading	64
Acknowledgment	49		
Further Reading	49		
4. Endophytic Microbes		5. Microsporidia: A Model for Minimal Parasite-Host Interactions	
<i>M. Tadych and J.F. White</i>		<i>Catherine Texier, Cyril Vidau, Bernard Viguès, Hicham El Alaoui and Frédéric Delbac</i>	
Defining Statement	51	Introduction	65
Introduction	51	The Polar Tube and the Spore Wall of Microsporidian Spores are Involved in Host Cell Invasion	66
Fungal Endophytes	52	The Reduced and Compact Microsporidian Genomes Reflect Host Dependency	66
Some Common Endophyte-Grass Associations	55	Host Immune Response: From Protective to Overwhelmed Defences	68
Tall Fescue- <i>Neotyphodium coenophialum</i> Association	55	Conclusion and Future Directions	70
Perennial Ryegrass- <i>Neotyphodium lolii</i> Association	55	References and Recommended Reading	70
Darnel Ryegrass- <i>Neotyphodium occultans</i> Association	56		
The Sleepygrass- <i>Neotyphodium chisosum</i> Association	56	6. Mycorrhizae	
The 'Drunken Horse Grass'- <i>Neotyphodium gansuense</i> Association	56	<i>J. Dighton</i>	
The 'Dronkgras'- <i>Neotyphodium melicicola</i> Association	56	Defining Statement	73
Forest Hedgehog Grass- <i>Neotyphodium</i> Association	57	Introduction	73
'Hueçu' Grasses- <i>Neotyphodium tembladerae</i> Association	57	Types of Mycorrhizae	74
Ecological Impacts of Endophytes	57	Endomycorrhizae	74
Production of Nontoxic Endophytes	58	Ectomycorrhizae	75
Endophytes as Sources of Bioactive Metabolites	58	Orchid Mycorrhiza	75
Ergot Alkaloids	59	Other Mycorrhizae	76
Indole-Diterpene Metabolites	59	Mycorrhizal Function	76
Peramine	60	Nutrient Acquisition	76
Lolines	60	Water Acquisition	77
Recent Developments	61	Plant Defense	77
Further Classification of Fungal Endophytes	62	Ecology of Mycorrhizae	78
New Endophytic Associations	62	Global Distribution of Mycorrhizal Types and Soil Nutrients	78
Novel Mechanism of Hyphal Growth	63	Influence of Mycorrhizae on Plant Communities	78
Defensive Mutualism and Mechanisms of Stress Tolerance in Hosts	63	Mycorrhizae as Food	79
		Mycorrhizae and Plant Production	79
		Agriculture	79
		Commercial Forestry	79
		Restoration	80
		Mycorrhizae and Pollution	80
		Acidifying Pollutants	80
		Heavy Metal Pollutants	80
		Radionuclide Pollutants	81
		Organic Pollutants	81

Climate Change	81	Permanent Wilt	112
Fungal Conservation	81	Pathogen Groups	113
Recent Developments	82	Kingdom Protozoa	113
Further Reading	82	Kingdom Stramenopila	113
		Kingdom Eumycota (Fungi)	116
7. Lichens		Diagnosis	123
<i>S. Hammer</i>		Control	124
Defining Statement	85	Further Reading	125
Introduction	85		
Historical Note	89	10. Entomogenous Fungi	
Lichen Evolution	90	<i>R.A. Humber</i>	
The Symbiosis	92	Defining Statement	127
Discussion	94	Introduction	127
Further Reading	94	Infection Processes and Pathobiology	128
		Fungus-Host Interactions During Cuticular Penetration	128
8. Plant Pathogens and Disease		Fungal Development in the Hemocoel	132
<i>J.J. Burdon, P.H. Thrall and L. Ericson</i>		Practical Uses of Entomogenous Fungi	134
Defining Statement	97	Development of Fungal Biological Control Agents	134
Introduction	97	Is a Fungus a Pathogen or Saprobe?	136
Where Disease Emergence Stems from Simple Ecological Changes in Distribution	98	Safety of Fungi as Biological Control Agents	136
Pathogens 'Catching Up' with Anthropogenically Generated Changes in the Distribution of Their Hosts	98	A Look Forward for Entomogenous Fungi	137
Jumps to New, Previously Unexposed Hosts	98	Modernization of Systematics and Taxonomy	137
Where Disease Emergence Stems from Genetic Change in Pathogens	99	Nontraditional and Nonorganismal Uses of Entomogenous Fungi	137
Where Disease Emergence Stems from Environmental Change	102	Integration of Multidisciplinary Inputs to Insect Mycology	138
Can We Predict the Identity of Future Emerging Diseases?	102	Recent Developments	139
Countering Invasive Plant Diseases	103	Further Reading	140
Conclusions	103		
Further Reading	104	11. Fungal Infections, Systemic	
		<i>J.F. Staab and B. Wong</i>	
9. Fungal and Protist Plant Pathogens		Defining Statement	143
<i>A.B. Gould</i>		Introduction	143
Defining Statement	105	Classification of Pathogenic Fungi	143
Introduction	105	Host Defenses against Fungal Infections	145
Fungal Characteristics	106	Molecular Approaches for Studying Fungal Pathogenesis	147
Hyphae and Fungal Cells	106	Common Fungal Diseases	150
Nutrition	106	Diseases Caused by True Pathogens	150
Reproduction	108	Diseases Caused by Opportunistic Fungi	157
Dispersal and Survival	109	Recent Developments	165
Fungi and the Environment	110	Summary and Conclusion	166
Symptoms of Plant Disease Caused by Fungi	111	Further Reading	166
Abnormal Growth	111		
Abscission	111	12. Fungal Infections, Cutaneous	
Host Tissue Replacement	111	<i>C.J. Watts, D.K. Wagner and P.G. Sohnle</i>	
Necrosis	111	Defining Statement	167
		Cutaneous Host Defenses	167
		Structure of the Skin	167

Keratinization and Epidermal Proliferation	167
Antifungal Substances	167
The Innate Immune System	168
The Inflammatory Response	168
The Cutaneous Immune System	168
Description of the Diseases	169
Superficial Fungal Infections	169
Cutaneous and Subcutaneous Mycoses	171
Systemic Mycoses with Cutaneous Manifestations	173
Recent Developments	173
Further Reading	173

Part II Protists

13. Amitochondriate Protists (Diplomonads, Parabasalids, and Oxymonads)

A.G.B. Simpson and I. Čepička

Defining Statement	177
Introduction	177
Amitochondriate Protists and Eukaryote Evolution	178
Systematics	179
Habitats	182
Cell Organization	182
Diplomonads	182
Parabasalids	183
Oxymonads	185
Hydrogenosomes and Mitosomes	185
Genetics and Genomics	187
Important Pathogenic Species	188
Further Reading	189

14. Amoebas, Lobose

A. Smirnov

Defining Statement	191
Introduction	191
Some Noteworthy Dates	192
Systematics and Phylogeny	192
Morphology	193
Morphotypes of Gymnamoebae	200
Diversity	200
Amoeboid Movement	207
Biology and Ecology	209
importance	210
Further Reading	211

15. Ciliates

D. Lynn

Defining Statement	213
Introduction	213
Morphological Features	215
Origin of Ciliates	215
Evolution of the Ciliate Cortex	216
Evolution of Nuclear Dimorphism	217
Major Clades	218
Ultrastructure and the Structural Conservatism of the Ciliate Cortex	219
Molecular Systematics and the Major Clades	219
Diversity at the Class Level	219
The Two Subphyla	219
The 11 Classes	219
Probing Diversity at the Species Level	224
Morphological Diversity at the Species Level	224
Molecular Techniques at the Species Level	224
Further Reading	226

16. Secretive Ciliates and Putative Asexuality in Microbial Eukaryotes

Micah Dunthorn and Laura A. Katz

Putative Asexual Microbial Eukaryotes	227
The Powerlessness of Observation	228
An Improved Phylogenetic Framework	229
Reversing the Loss of Sex?	229
Ancient Asexuality?	231
Concluding Remarks and Outstanding Questions	231
Acknowledgements	231
References	232

17. Coccolithophores

R.W. Jordan

Defining Statement	235
Morphology	235
General Features of the Coccolithophore Cell	235
Coccolith Morphology	237
Coccolith Production	238
Functions of Coccoliths	238
Taxonomy	238
From the Chrysophyceae to the Haptophyceae	238
Haptophyte Taxonomy	239

Taxonomic Concepts Based on Morphology	239	Evolution of the Mitotic Apparatus	271
Taxonomic Concepts Based on Molecular Genetics	240	Conclusions	274
Collection Methods	240	Further Reading	277
Biogeography and Ecology	241	20. Dictyostelium	
General Distribution	241	<i>C. Scott and P. Schaap</i>	
Seasonality and Depth Preferences	241	Defining Statement	279
Blooms	242	Taxonomy, Evolution, and Ecology	279
Detection of Coccolithophore Blooms	242	Genomics and Tractability	281
Coccolithophore Viruses	244	The <i>D. discoideum</i> Genome	281
Impact on the Regional Climate and Environment	244	Experimental Tractability	282
Carbon Release and Sinking of Blooms	245	The Developmental Program of <i>D. discoideum</i>	283
Evolution	245	Morphogenesis	283
First Appearance of the Coccolithophores	245	Gene Expression and Cell Differentiation	286
Coccolithophore Diversity and Extinctions	246	Recent Developments in the <i>Dictyostelium</i> Field	288
Past Coccolithophore Blooms	246	The Sporulation Cascade	288
Biostratigraphic Use	247	Phylogeny Wide Genome Sequencing	288
Further Reading	247	Evolutionary History of cAMP Signaling	288
18. The Glass Menagerie: Diatoms for Novel Applications in Nanotechnology		Conclusions	289
<i>Richard Gordon, Dusan Losic, Mary Ann Tiffany, Stephen S. Nagy and Frithjof A.S. Sterrenburg</i>		Further Reading	289
Why Diatoms?	249	21. Foraminifera	
Diatom Silica Structure	251	<i>J. Pawlowski</i>	
Silica Biomineralization and Diatom Genomics	251	Defining Statement	291
Diatom Biophotonics	255	Introduction	291
Microfluidics Within Diatoms	256	Cytological and Morphological Characteristics	292
Diatoms for Drug Delivery	257	Granuloreticulopodia	292
Selective Breeding of Diatoms Using a Compustat	258	Nuclei and Other Organelles	292
Computing With Diatoms	258	Test Morphology	293
Conclusions	258	Life Cycle and Reproduction	294
Acknowledgements	258	Ecology	295
References	259	Distribution and Abundance	295
19. Dinoflagellates		Feeding Strategies	295
<i>M.-O. Soyer-Gobillard</i>		Symbiosis	295
Defining Statement	263	Collection and Maintenance	297
Introduction	263	Morphology-Based Classification	297
Dinoflagellate Evolution	263	Molecular Phylogeny and Diversity	298
Dinoflagellate Diversity	265	Phylogenetic Position	298
<i>Cryptocodinium cohnii</i> Biecheler	265	Macroevolutionary Relationships	300
<i>Noctiluca scintillans</i> McCartney	268	Molecular Diversity	308
<i>Prorocentrum micans</i>	269	Evolutionary History and Geological Importance	308
Mixotrophic Dinoflagellates	270	Further Reading	309

22. Euglenozoa

M.A. Farmer

Defining Statement	311
Taxonomy	311
Cell Structure	312
Flagellar Structure	312
Mitochondria	314
Nuclei	314
Cytoskeleton	314
Euglenids	314
Pellicle	314
Flagella	315
Chloroplasts	315
Feeding Apparatus	316
Kinetoplastids	317
The Kinetoplast	317
RNA Editing in Kinetoplastids	318
The Glycosome	318
Diplonemids and Other Euglenozoa	319
Evolutionary Relationships	320
Further Reading	321

23. Protozoan, Intestinal

K. Pierce and C.D. Huston

Defining Statement	323
Introduction	323
The Apicomplexa: <i>Cryptosporidium</i> Species	324
The Microsporidia	326
The Flagellates: <i>Giardia intestinalis</i>	327
The Amoebae: <i>E. histolytica</i>	329
Recent Developments	331
<i>Cryptosporidium</i> species	331
<i>G. intestinalis</i>	332
<i>E. histolytica</i>	332
Conclusion	332
Further Reading	332

24. Leishmania

G.B. Ogden and P.C. Melby

Defining Statement	335
Classification and Morphology	335
Life Cycle and Ecology	336
Cellular Biology	337
Plasma Membrane and Surface	
Molecules	337
Flagellum	338
Other Membrane-Bound	
Organelles	338
Molecular Biology and Control of Gene	
Expression	339

Genomic Organization	339
mRNA Processing	339
Control of Gene Expression	340
DNA Transfection and Gene	
Targeting	340
Pathogenesis and Host Response	340
Epidemiology and Disease	341
Diagnosis, Treatment, and	
Control	343
Recent Developments	344
Further Reading	344

25. Oomycetes (Water Mold, Plant Pathogenic)

S. Kamoun

Defining Statement	347
Impact on Agriculture and	
Environment	347
Biology	348
Evolutionary History	348
General Biological Features	349
Unique Biological Features	350
Genome Structure	350
Pathology	350
Infection Cycle	350
Adhesion, Penetration, and Colonization	
of Host Tissue	350
Induction of Defense Responses and	
Disease-Like Symptoms	351
Inhibition of Host Enzymes	351
Effectors	352
Conclusions	352
Further Reading	353

26. Picoeukaryotes

R. Massana

Defining Statement	355
Introduction	355
What Are Marine Picoeukaryotes?	355
Method-Driven History of Marine	
Picoeukaryotes	356
Biology of Cultured Marine Picoeukaryotes	358
Cultured Strains	358
Cellular Organization	359
Physiological Parameters	360
The Implications of Being Small	360
Picoeukaryotes in the Marine Environment	361
Bulk Abundance and Distribution	361
Ecological Role of PP	362
Ecological Role of HP	362
Molecular Tools to Study Picoeukaryote	
Ecology	363

Elusive View of In Situ Diversity by Nonmolecular Tools	363
Cloning and Sequencing Environmental Genes	363
Beyond Clone Libraries: FISH and Fingerprinting Techniques	364
In Situ Phylogenetic Diversity	365
Overview of 18S rDNA Libraries	365
Relatively Well-Known Groups	365
Marine Alveolates and Marine Stramenopiles	367
Novel High-Rank Phylogenetic Groups	367
Biogeography	367
The Genomic Era	368
Genome Projects on Cultured Picoeukaryotes	368
Environmental Genomics or Metagenomics	368
Recent Developments	368
Concluding Remarks	370
Further Reading	370

27. Stramenopiles

*H.S. Yoon, R.A. Andersen, S.M. Boo
and D. Bhattacharya*

Defining Statement	373
Evolutionary History of the Stramenopiles	373
Origin of the Stramenopiles	374
Fossil Record and Divergence Times for Stramenopiles	374
Diversity of the Stramenopiles	376
The Stramenopile Plastid	377
Cell Covering	379
Flagella	379
Phylogeny and Classification of the Stramenopiles	380
Colorless Stramenopiles	380
Photosynthetic Stramenopiles	381
Phaeophyceae	383
Conclusion	383
Further Reading	383

28. Toxoplasmosis

J.C. Boothroyd

Defining Statement	385
Introduction	385
Classification	386
Life Cycle	386

Clinical Aspects and Public

Health	387
Symptoms	387
Diagnosis	387
Treatment	387
Public Health	388
Population Biology	388
Major Genotypes	388
Strain-Specific Virulence	389
Molecular Biology and Genetics	389
Genome and Gene Expression	389
Genetics	389
Molecular Genetic Tools Available for the Study of <i>Toxoplasma</i>	390
Cell Biology	390
Organelles	390
The Lytic Cycle	391
Host Immune Response	393
Nature of the Host Response	393
Genetics of Host Susceptibility	394
Immunization Studies	394
Effect on Behavior	394
Prospects for Future Improvements in Controlling Toxoplasmosis	394
Public Health	394
Vaccination	394
Chemotherapy	395
Further Reading	395

29. Trypanosomes

*L.V. Kirchhoff, C.J. Bacchi, F.S. Machado,
H.D. Weiss, H. Huang, S. Mukherjee,
L.M. Weiss and H.B. Tanowitz*

Defining Statement	397
Trypanosoma Cruzi	397
Transmission	398
Organism and Life Cycle	398
Epizootiology and Epidemiology	400
Clinical Manifestations	401
Pathogenesis	402
Diagnosis	403
Treatment	403
Prevention	404
Trypanosoma Brucei	404
Organism and Life Cycle	404
Epidemiology	405
Pathology and Pathogenesis	406
Clinical Manifestations	407
Diagnosis	407
Treatment	407
Prophylaxis and Prevention	409
Further Reading	409

30. Sleeping Sickness

*S.C. Welburn, K. Picozzi, I. Maudlin
and P.P. Simarro*

Defining Statement	411
Background	411
Epidemiology of Sleeping Sickness	412
Distribution	412
Reservoirs of Disease	413
Transmission Cycles	414
Causes of Epidemics	415
Diagnosis	416
Clinical Signs	416
Diagnostic Tests	416
Treatment	417
Disease Burden	418
Economic Impact	418
Sleeping Sickness Control	419
Controlling Gambian Sleeping Sickness	419
Controlling Rhodesian Sleeping Sickness	419
Future Prospects for Controlling Sleeping Sickness	420
A Neglected Disease	420
Treatment	422
Diagnostics	422
Vector Control	423
The Future: Control or Eliminate?	423
Gambian Sleeping Sickness	423
Rhodesian Sleeping Sickness	423
Further Reading	425

31. Secondary Endosymbiosis

J.M. Archibald

Defining Statement	427
The Origin of Eukaryotic Photosynthesis	427
Primary Endosymbiosis	427
Endosymbiotic Gene Transfer and Plastid Protein Import	429
Secondary Endosymbiosis	430
Diversity of Secondary Plastid-Containing Algae	430
Gene Transfer and Protein Import in Secondary Plastids	431
Number of Secondary Endosymbiotic Events	431
Nucleomorphs and Their Genomes	433
Further Reading	434

32. Algal Blooms

P. Assmy and V. Smetacek

Defining Statement	435
Introduction	435
Physical Environment of Blooms	436

Chemical Environment of Blooms	437
Major Contributors to Algal Blooms	438
Cyanobacteria	438
Haptophytes (Prymnesiophytes)	440
Dinoflagellates	441
Other Groups	442
Pathogens and Grazers of Algal Blooms	442
Recurrent and Unusual Algal Blooms	443
Spring Blooms	443
Autumn Blooms	445
Blooms in Upwelling Regions of Low Latitudes	445
Miscellaneous Algal Blooms	446
Harmful Algal Blooms	446
Iron-Fertilized Blooms	447
Future Research Avenues	448
Recent Developments	448
Marine Genomics	448
Abandoning Sverdrup's Critical Depth Hypothesis	449
The Role of Grazing in Suppressing Nondiatom Blooms and Recycling Iron in Pelagic Ecosystems	449
Acknowledgment	450
Further Reading	450

33. Food Webs, Microbial

E.B. Sherr and B.F. Sherr

Defining Statement	451
Introduction	451
Understanding Microbial Food Webs	452
Components and Pathways	452
Microbes in Aquatic Food Webs	454
Heterotrophic Prokaryotes	454
Autotrophic Prokaryotes	454
Autotrophic Eukaryotes	455
Heterotrophic Eukaryotes	455
Marine Pelagic Habitats	456
Benthic Habitats	457
Role of Microbial Food Webs in Biogeochemical Cycling	458
Food Resource for Metazoans	460
Modeling Microbial Food Webs	460
Chemical Interactions Between Microbes	462
Spatial Structure of Microbial Food Webs	463
Recent Developments Biogeography of Form and Function in Microbial Food Webs	464
Further Reading	465

Index	467
-------	-----
