Preface

xv

1. Introduction: A Short History of Virology

Gustavo Fermin and Paula Tennant

$C_{332,652}H_{492,388}N_{90,245}O_{131,196}P_{7,501}S_{2,340}$	2
From Filterable Agent to Genetic Parasite	3
Viruses Have Contributed to Our Understanding of a Gene and How It Works	7
Viruses Have Allowed Us to Understand How Genes Are Regulated	9
Viruses Have Contributed to Our Understanding of How Genomes Are Organized	9
Viruses Have Contributed to Our Understanding of the Mechanisms Underlying RNAi	10
Viruses That Cause Diseases Represent a Small Fraction of the Viral Community	11
Viruses Can Be Beneficial to Their Hosts	12
Viruses Can Function as Tools for Biotechnology	13
Further Reading	16

2. Virion Structure, Genome Organization, and Taxonomy of Viruses

Gustavo Fermin

What Is a virus?—Perhaps There Is a Simple Answer, Not an Easy Answer	17
Virion Morphologies	18
Icosahedral/Spherical Virions	28
Filamentous/Bacilliform Virions	33
Amazing Forms Among Old and New Comers	33
Do Viruses Really Need a Coat?	34
Types and Function of the Virus Envelope	34
Genomes: The Nucleic Acids Space Exploited by Viruses	35
dsDNA viruses	36
ssDNA viruses—No Polarity or Mixed Polarity	40
ssDNA(−) viruses	41
ssDNA(+) viruses	41

ssDNA(+/-) viruses	41
dsRNA viruses	42
ssRNA (Viroids)	42
ssRNA(-) viruses	43
ssRNA(+) viruses	43
ssRNA(+/-) viruses	44
Virus Taxonomy: Organization of the Vast Diversity Among Viruses	44
Baltimore Classification	45
The International Committee on Taxonomy of Viruses	46
The Goal of Virus Taxonomy	53
Further Reading	54
3. Replication and Expression Strategies of Viruses	
<i>Sephra Rampersad and Paula Tennant</i>	
Overview of Virus Genome Transcription and Replication	56
Polymerases	58
Initiation, Elongation, and Termination	59
Initiation	60
Elongation	60
Termination	60
Mechanisms of Genome Transcription and Replication	61
Rolling Circle Replication	61
Rolling-Hairpin Replication	61
dsDNA Bidirectional Replication	62
dsDNA (RT) Transcription and Replication	63
ssRNA (RT) Replication	63
Positive-Strand RNA Virus Replication	64
Double-Strand RNA Virus Transcription and Replication	65
Negative-Strand RNA Virus Transcription and Replication	65
dsDNA Template Transcription and Replication	66
Viral Genome Expression	66
Disruption of Transcription Initiation Complex Assembly	67
Termini Maturation and Modification	68
Internal Ribosome Entry	69
Poly(A) Tailing	70
RNA Editing	71
Alternative Splicing	71
Suppression of Termination	72
Programmed Ribosomal Frameshifting	73
Leaky Scanning and Translation Reinitiation	73
Ribosomal Shunting	74
"2A" Oligopeptides and "Stop-Carry On" Recoding	74
Subversion of Host Gene Expression	75
Inhibition of Cellular RNA Polymerase	75
Disruption of Cellular mRNA Export Pathways	76
Decay of Host mRNAs by Viruses	77

Circumvention of Cellular RNA Decay Machinery	78
Shutoff of Cellular mRNA Translation	78
Recruitment of Cellular Hsp70 Chaperones for Viral Protein Folding	79
Compromising Cellular Lipid Metabolism	79
Cell Cycle Disruption for Preferential Viral Replication	80
Virus Genome Replication Complexes	82
Further Reading	82
 4. Origins and Evolution of Viruses	
<i>Jerome E. Foster and Gustavo Fermin</i>	
Are Viruses Living Organisms?	84
Classic Virus Concept	84
The Virocell Concept	85
Virocell Versus Ribocell: Are Giant Viruses the Missing Link?	85
Sources of Variation in Virus Genomes: The Many Ways By Which Viruses Change	86
Mutation and High Viral Replication Error Rates	87
Recombination	88
Reassortment	89
Horizontal Gene Transfer	89
Where Do Viruses Come From?	90
Hypotheses on Virus Origin	90
Evidence for Viruses Being Ancient	92
Extreme Chimerism and Modularity	93
What Are Metagenomics Studies Telling Us?	94
Virus Hallmark Genes	94
Viral Capsid Proteins and Their Relatedness	95
Viroids and Mavericks	96
Evolution of Viruses With Their Hosts	97
Arms Race Between Hosts and Parasites, and Unplanned Mutualism	97
Viruses and the Tree of Life: Tree of Life or Tree of Viruses?	98
Further Reading	100
 5. Host Range, Host–Virus Interactions, and Virus Transmission	
<i>Gustavo Fermin</i>	
Defining the Host Range	102
Interactions Between a Virus and Its Host(s) May Have Different Outcomes	104
The Many Ways of Virus Transmission	105
Cell-to-Cell Transmission	105
Virus Survival in the Environment	106
Horizontal Transmission	108
Airborne Viruses	108
Waterborne Viruses	125

Soilborne Viruses	126
Transplantation, Anastomosis, and Grafting	126
Zoonosis in the Spread of Viruses	127
Virus Transmission by Vectors	128
Vertical Transmission: Parent to Offspring Transmission of Viruses	133
Further Reading	134
 6. Viruses as Pathogens: Plant Viruses	
<i>Paula Tennant, Augustine Gubba, Marcia Roye and Gustavo Fermin</i>	
Geminiviruses: Cassava mosaic geminiviruses, <i>Maize streak virus, Wheat dwarf virus</i>	137
Cassava mosaic geminiviruses	137
Maize streak virus	140
Wheat dwarf virus	141
Potyviruses and Criniviruses: Sweet potato feathery mottle virus, <i>Sweet potato chlorotic stunt virus, and Sugarcane mosaic virus</i>	142
Sugarcane mosaic virus	146
Babuviruses: <i>Banana bunchy top virus</i>	147
Cucumoviruses: <i>Cucumber mosaic virus</i>	150
Tungroviruses and Waikaviruses: <i>Rice tungro bacilliform virus</i> and <i>Rice tungro spherical virus</i>	152
<i>Rice tungro bacilliform virus</i>	154
<i>Rice tungro spherical virus</i>	154
Further Reading	156
 7. Viruses as Pathogens: Animal Viruses, With Emphasis on Human Viruses	
<i>Jerome E. Foster, José A. Mendoza and Janine Seetahal</i>	
<i>Retroviridae: Human Immunodeficiency Virus 1</i>	158
Structure and Genomic Organization	159
Genetic Diversity	159
Replication and Pathogenesis	160
Surveillance and Detection	161
Treatment	161
<i>Flaviviridae: Dengue Virus and Other Members</i>	163
Structure and Genomic Organization	163
<i>Dengue virus</i>	164
<i>Yellow fever virus</i>	166
<i>Zika virus</i>	167
<i>Hepacivirus C</i>	169
<i>Togaviridae: Chikungunya Virus</i>	170
Characteristics and Diversity	171
Clinical Aspects	171
Transmission and Epidemiology	172
Diagnosis and Treatment	173

<i>Filoviridae: Ebola and Marburg Viruses</i>	173
Structure and Genomic Organization	174
Genetic Diversity	174
Replication Cycle	175
Pathogenesis and Clinical Manifestations	175
Diagnosis and Detection	176
Treatment and Prevention	176
<i>Orthomyxoviridae: Influenza Viruses</i>	177
Structure and Genomic Organization	177
Genetic Diversity	178
Host Range and Distribution	179
Viral Replication	179
Pathogenesis	180
Treatment	181
<i>Papillomaviridae: Human Papillomavirus</i>	181
Genetic Organization, Diversity, and Replication	182
Oncogenic Potential of Papillomaviruses	183
Diagnosis and Treatment	184
<i>Rhabdoviridae: Rabies Lyssavirus</i>	184
Structure and Organization	185
Genetic Diversity	185
Replication and Pathogenesis	185
Clinical Symptoms	186
Prevention and Treatment	187
Further Reading	187

8. Viruses as Pathogens: Animal Viruses Affecting Wild and Domesticated Species

Jerome E. Foster

Animal Influenza Viruses	192
Genetic Diversity and Epidemiology	193
Pathogenesis	194
Diagnosis, Treatment, and Management	196
African swine fever	197
Structure and Genomic Organization	197
Genetic Diversity	198
Replication	198
Pathogenesis	199
Detection, Prevention, and Control	199
Equine Infectious Anemia	200
Structure, Genomic Organization, and Diversity	200
Pathogenesis and Replication	201
Diagnosis, Prevention, and Control	201
Equine Encephalitis	202
Structure and Genomic Organization	203
Pathogenesis and Replication	203
Eastern Equine Encephalitis	204

Western Equine Encephalitis	205
Venezuelan Equine Encephalitis	205
Diagnosis, Prevention, and Treatment	206
African Horse Sickness	206
Structure, Genomic Organization, and Genetic Diversity	207
Pathogenesis and Replication	208
Diagnosis, Prevention, and Treatment	208
Marek's Disease	209
Structure, Genomic Organization, and Genetic Diversity	209
Pathogenesis	210
Virus Replication	211
Diagnosis, Prevention, and Treatment	212
Foot-and-Mouth Disease	212
Structure, Genomic Organization, and Genetic Diversity	213
Pathogenesis and Replication	214
Diagnosis, Control, Prevention, and Treatment	215
Further Reading	216
9. Viruses of Prokaryotes, Protozoa, Fungi, and Chromista	
<i>Gustavo Fermin, Sudeshna Mazumdar-Leighton and Paula Tennant</i>	
Viruses Infecting Archaea	218
<i>Sulfolobus islandicus rod-shaped virus 1</i>	218
<i>Sulfolobus turreted icosahedral virus 1</i>	220
Viruses Infecting Bacteria	222
<i>Escherichia virus P1</i>	222
<i>Escherichia virus Lambda</i>	224
Viruses Infecting Fungi	228
<i>Cryphonectria hypovirus 1</i>	228
<i>Sclerotinia sclerotiorum betaendornavirus 1</i>	230
Viruses Infecting Protozoa	231
RNA viruses of <i>Leishmania</i>	231
<i>Acanthamoeba polyphaga mimivirus</i>	233
Viruses Infecting Chromista	236
<i>Plasmopara halstedii virus A</i>	238
<i>Phytophthora infestans</i> RNA viruses	240
Further Reading	243
10. Host–Virus Interactions: Battles Between Viruses and Their Hosts	
<i>Gustavo Fermin and Paula Tennant</i>	
Types of Virus–Host Relationships: Terrorism vs Guerilla Warfare	246
Weapons and Defenses I: Prokaryotic Virus–Host Interactions	247
Weapons and Defenses II: Eukaryotic Virus–Host Interactions	249
Virus Recognition, Attachment, and Entry	250
Virus Uncoating	250
Virus Factories for Virus Replication and Assembly	251

Virion Assembly and Egress	251
Virus-Induced Changes in Selected Metabolic Pathways	252
Virus-Induced Changes in Selected Structures and Functions of the Cell	254
Other Host–Virus Interactions and Immune Evasion	257
Innate Immunity	258
Hormone Action in Many Facets of Plant Virus Resistance	263
RNA Silencing	264
Other Innate Immune Responses Against Viruses	266
Adaptive Immunity	267
Further Reading	270

11. Beneficial Interactions with Viruses

Paula Tennant and Gustavo Fermin

Phage–Host Interactions	275
Phages Affect Host Population Sizes and Biogeochemical Cycles	275
Phages Manipulate Host Metabolism	276
Phages Contribute to Microbial–Metazoan Symbioses That Affect Metazoan Fitness	277
Virus–Fungus Interactions	278
Mycoviruses Increase Their Hosts' Fitness	278
Mycoviruses as Modulators of Symbiotic Associations	279
Interactions Between Mycoviruses and Nonhosts	279
Virus–Arthropod Interactions	280
Arthropod Viruses Protect Their Hosts	280
Arthropod Viruses Mediate Host Responses	282
Unexpected Outcomes in Virus–Mammal Interactions	282
Animal Viruses Can Protect Against Other Viruses	282
Retroviruses and Emergence of Placental Mammals	283
Animal Viruses as Drivers of Protein Adaptation	284
Virus–Plant Interactions	285
Viruses Help Plants Cope With Abiotic Stress	285
Viruses Help Plants Cope With Biotic Stress	286
Plant Viruses as Modulators of Symbioses	286
Interactions Between Vectors, Nonvectors, and Plant Viruses	287
Further Reading	288

12. Viruses as Tools of Biotechnology: Therapeutic Agents, Carriers of Therapeutic Agents and Genes, Nanomaterials, and More

Gustavo Fermin, Sephra Rampersad and Paula Tennant

Phage Therapy and Related Techniques	292
Phage Display	294
Virus-Based Vaccine Technologies	295
Mammalian Viruses With Inherent Cytotoxic Activity as Therapeutic Agents	299

Mammalian Viruses as Gene Delivery Vehicles	301
γ-Retroviral Vectors	302
Lentivirus Vectors	304
Adenovirus Vectors	305
Adeno-associated virus Vectors	305
Plant Viral Vectors	306
Viruses as Biological Control Agents	310
Viruses as Scaffolds and Templates for Nanomaterials	313
Imaging Molecules	314
Scaffolds for Tissue Engineering	314
Templates for Materials Synthesis	315
Further Reading	315
 13. Viruses as Targets for Biotechnology: Diagnosis and Detection, Transgenesis, and RNAi- and CRISPR/Cas-Engineered Resistance	
<i>Paula Tennant and Gustavo Fermin</i>	
Uncovering the Virosphere and Hidden World of Viruses	318
Classic Sequence-Based Methodologies	319
Next Generation Sequencing	319
Metagenomics Approaches	320
Detection of Viruses and Diagnosis of Virus Infections	321
Culture Systems: Whole Organisms- and Cell-Based Methods	322
Immunological Methods	323
Molecular Methods Based on Detection of Nucleic Acids	325
Viral Targets for Engineered Resistance	328
CRISPR/Cas9 and Other Targets for Engineering Virus Resistance	334
Further Reading	337
 Conclusion: It's a Viral World	339
Index	343
