1. MicroRNAs in DNA Damage Response, Carcinogenesis, and Chemoresistance	1
Yuanzhang Fang, Lu Zhang, Zhenghu Li, Yujing Li, Cheng Huang, and Xiongbu Lu	
1. Introduction	2
2. MiRNA Regulation in Response to DNA Damage	3
3. DNA Damage Response Regulation by MiRNAs	8
4. MiRNAs in Cancer	13
5. The Role of MiRNAs in Drug Resistance	26
6. Conclusion	33
References	33
2. MicroRNAs as Key Effectors in the p53 Network	51
Frauke Goeman, Sabrina Strano, and Giovanni Blandino	
1. Introduction	52
2. MicroRNAs, Small Helpers With Big Effects in the p53 Pathway	53
3. MicroRNAs Engaged in Fulfilling GOF Activities of Mutant p53	70
4. Conclusions	77
Acknowledgments	78
References	78
3. Impact of MicroRNAs in the Cellular Response to Hypoxia	91
Thomas Bertero, Roger Rezzonico, Nicolas Pottier, and Bernard Mari	
1. Introduction	92
2. Regulation of MiRNA Expression by Hypoxia	96
3. The Diverse Roles of MiRNAs in Cellular Adaptation to Hypoxia	104
4. Potential Clinical Applications	130
Acknowledgments	136
References	136

4. Understanding the Genomic Ultraconservations: T-UCRs and Cancer	159
Linda Fabris and George A. Calin	
1. Introduction	159
2. Long Noncoding RNA: Heterogeneous and Still Less Understood Transcripts	160
3. Why Ultraconservation?	161
4. Regulation Mechanism of T-UCR	162
5. T-UCR in Disease and Cancer	164
6. Conclusions and Future Perspectives	168
Acknowledgments	169
References	169
5. Following MicroRNAs Through the Cancer Metastatic Cascade	173
Eleonora Grisard and Milena S. Nicoloso	
1. Introduction	174
2. Detachment and Local Invasion	177
3. Intravasation	194
4. Survival in the Circulation	195
5. Arrest at Distant Organ Site and Extravasation	196
6. Micrometastasis Formation	198
7. Metastatic Colonization	200
8. Angiogenesis	203
9. Conclusion and Future Perspectives	214
References	216
6. MicroRNAs in Oncogenesis and Tumor Suppression	229
Simona Barbato, Giancarlo Solaini, and Muller Fabbri	
1. Introduction	230
2. MiRNAs in Oncogenic Pathways	232
3. MiRNAs in Tumor-Suppressor Pathways	245
4. Conclusions	254
Acknowledgments	256
References	256
7. MicroRNAs as Multifaceted Players in Glioblastoma Multiforme	269
Neri Mercatelli, Silvia Galardi, and Silvia Anna Ciafrè	
1. Introduction	270
2. Clinical and Molecular Subtyping	270

3. Glioblastoma Initiation and Propagation: The Cancer Stem Cells	274
4. Treatment Options and Resistance to Therapy	275
5. MicroRNAs and Glioblastoma	278
6. MicroRNAs in Glioblastoma Classification	287
7. MicroRNAs and Resistance to Chemotherapy and Radiotherapy in Glioblastoma	293
8. MicroRNAs in the Interaction Between Glioblastoma and Its Microenvironment	296
9. MicroRNAs as Novel Therapeutic Agents and Targets in Glioblastoma	301
10. MicroRNAs as Circulating Biomarkers for Glioblastoma	304
11. Concluding Remarks	310
Acknowledgments	312
References	312
