1. Antivirulence Properties of Probiotics in Combating Microbial Pathogenesis	1
M. Surendran Nair, M.A. Amalaradjou and K. Venkitanarayanan	
1. Introduction	2
2. Mechanisms of Bacterial Pathogenicity	3
3. Mechanism of Action of Probiotics—Indirect Effect on Host	10
4. Direct Effects or Antivirulence Attributes of Probiotics on Pathogens	12
5. Conclusion	22
References	22
2. Iron and Fungal Physiology: A Review of Biotechnological Opportunities	31
L. Comensoli, S. Bindschedler, P. Junier and E. Joseph	
1. Introduction	32
2. Fungal Metabolic Activities Regarding Iron	34
3. Iron and Biotechnology	44
4. Case Study: Fungi to the Rescue of Archaeological Iron	45
5. Conclusions	54
Acknowledgments	55
References	55
3. Contamination Control for Scientific Drilling Operations	61
J. Kallmeyer	
1. Introduction	62
2. Drilling Techniques	64
3. Contamination Tracers	72
4. Concluding Remarks	87
References	88

4. Microbial Phosphite Oxidation and Its Potential Role in the Global Phosphorus and Carbon Cycles	93
I.A. Figueroa and J.D. Coates	
1. Introduction	94
2. Phosphite Geochemistry From the Archean to the Anthropocene	95
3. Phosphite Oxidation in Biology	101
4. The Potential Role of Microbial Phosphite Oxidation in Global Phosphorus Cycling and Primary Production	110
5. Concluding Remarks	112
Acknowledgments	113
References	113
