Contributors

ix

1. Breast Cancer Immunology and Immunotherapy: Current Status and Future Perspectives	1
L. de la Cruz-Merino, M. Chiesa, R. Caballero, F. Rojo, N. Palazón, F.H. Carrasco, and V. Sánchez-Margalet	
1. Introduction	3
2. Mechanisms of the Immune Response Inhibition in BC: Role of MDSCs and Regulatory T Cells	5
3. Immune System in the Therapeutic Response in BC. The Immunogenic Cell Death	9
4. T-Infiltrating Lymphocytes Molecular and Genomic Characterization as a Strategic Tool to Better Understand BC Behavior	11
5. Neoantigen Prediction: Genomic Tools for Personalized Immunotherapy	22
6. Immunotherapeutic Approaches in BC. Clinical Trials With Immune Checkpoint Inhibitors	25
7. Conclusions	36
Acknowledgments	37
References	37
2. New Insights Into Cellular Stress Responses to Environmental Metal Toxicants	55
H.-R. Park, R. Oh, P. Wagner, R. Panganiban, and Q. Lu	
1. Introduction	56
2. ER Stress and UPR	57
3. Metal-Induced ER Stress	62
4. ER Stress and Its Impact on Oxidative Stress	65
5. Genomics Approaches in Metal-Induced Cell Stress Studies	67
6. Conclusions and Future Directions	72
Acknowledgments	73
References	73

3. An Update on Src Family of Nonreceptor Tyrosine Kinases Biology	83
J. Espada and J. Martín-Pérez	
1. Introduction	85
2. Regulation of SFKs Function	87
3. Redox-Dependent Regulation of SFK Function	89
4. Role of SFKs in PRL Signaling	93
5. Relevance of SFKs in Breast Cancer	100
6. Role of SFKs During Mammalian Embryo Development and in the Regulation of Embryonic and Somatic Stem Cells	107
7. Conclusions	110
Acknowledgments	112
References	112
4. STAT Transcription Factors in T Cell Control of Health and Disease	123
R. Goswami and M.H. Kaplan	
1. Engagement of the Jak-STAT Signaling Pathway	124
2. Jak-STAT Molecules in T Helper Cell Differentiation	128
3. STAT Molecules in the Development of Cytotoxic T Cells	136
4. STATs Mutations Result in Patient Immunodeficiency	138
5. STAT Molecules in Allergic Inflammation	139
6. Role of STAT Molecules in Intestinal Inflammation	143
7. Jak-STAT Molecules in Autoimmune Diseases	145
8. Blocking Cytokine Signaling to Treat Disease	149
9. Conclusion	152
References	153
5. Chemokine Receptor Signaling and the Hallmarks of Cancer	181
R.A. Lacalle, R. Blanco, L. Carmona-Rodríguez, A. Martín-Leal, E. Mira, and S. Mañes	
1. Introduction	182
2. The Chemokine Superfamily	183
3. Chemokine Activity on Neoplastic Cells	193
4. Chemokine Activities on Stromal Cells	207
5. Concluding Remarks	221
Acknowledgments	223
References	223

6. Mitochondrion: A Common Organelle for Distinct Cell Deaths? 245

Z. Wang, C. Figueiredo-Pereira, C. Oudot, H.L.A. Vieira, and C. Brenner

1. Introduction	247
2. Apoptosis	249
3. MPT-Driven Necrosis	254
4. Mitophagy	256
5. Implication of Mitophagy in Models of Neurological Diseases	263
6. Implication of Mitochondria-Dependent Cell Death in Cardiac Diseases	266
7. Conclusion and Perspectives	273
Acknowledgments	274
References	274

7. Antibody-Based Cancer Therapy: Successful Agents and Novel Approaches 289

D. Hendriks, G. Choi, M. de Bruyn, V.R. Wiersma, and E. Bremer

1. Introduction	290
2. Monoclonal Antibodies	292
3. Effector Mechanisms and Activity of Tumor-Targeting Antibodies	294
4. Immunomodulatory Antibodies	301
5. Antibody Engineering to Improve Effector Functions	306
6. Alternative Antibody Formats	312
7. Antibody-Drug Conjugates	320
8. Antibody-Cytokine Fusion Proteins	330
9. CAR-Transfected T Cells	344
10. Conclusions	349
References	350
