Preface	xxi
Acknowledgment	xxiii

PART 1 MATHEMATICAL, COMPUTATIONAL, AND PHYSICAL FOUNDATIONS

CHAPTER 1	Elements of Mathematical Modeling	3
1.1	Modeling Approaches	3
1.1.1	Physical Models	3
1.1.2	Animal Models	6
1.1.3	Conceptual Models	7
1.1.4	Mathematical Models	9
1.2	Synergy Between Modeling Approaches in Bioengineering and Life Sciences ..	15
CHAPTER 2	Elements of Mathematical Methods	19
2.1	Geometrical Space: Vector Spaces, Matrices, and Manifolds	19
2.1.1	Vector Spaces	19
2.1.2	Matrices: Basic Definitions and Algebraic Operations	22
2.1.3	Properties of Square Matrices	27
2.1.4	Norms in Vector Spaces	32
2.1.5	Manifolds	35
2.1.6	Mathematical Representations of Manifolds and Their Relationships ..	36
2.2	Elements of Real Analysis	39
2.2.1	Basic Concepts of Continuity and Differentiability	39
2.2.2	Uniform Continuity, Absolute Continuity, Lipschitz Continuity, and Integrability	41
2.3	Differential Operators and Vector Calculus Identities	47
2.4	Theorems of Vector Calculus	52
2.4.1	The Divergence Theorem	52
2.4.2	The Stokes Theorem	53
2.4.3	Scalar Invariants and Tensors	53
2.5	Connection Between Linear Algebra, Real Analysis, and Vector Calculus	58
2.5.1	Vector Spaces and Functional Spaces	58
2.5.2	Subsets, Subspaces, and Manifolds	59
CHAPTER 3	Elements of Computational Methods	63
3.1	Foundations of Numerical Mathematics	64
3.1.1	The Modeling Step	64
3.1.2	The Approximation Step	66
3.1.3	The Discretization Error	67

3.1.4	The Equivalence Theorem	69
3.1.5	Machine Representation of Numbers and Rounding Error	69
3.1.6	The Chain of Errors	71
3.1.7	Example: Choice of the Numerical Model	72
3.1.8	Example: Evaluation of the Derivative of a Function	74
3.2	Application of the Concepts of Numerical Mathematics	76
3.3	Polynomial Approximation of Functions and Data	76
3.3.1	Polynomial Interpolation	76
3.3.2	Piecewise Polynomial Interpolation	80
3.4	Numerical Solution of Systems of Linear Algebraic Equations	85
3.4.1	Linear Algebraic Systems	86
3.4.2	Solution of a Linear System Using Direct Methods	87
3.4.3	Solution of a Linear System Using Iterative Methods	91
3.5	Numerical Solution of Ordinary Differential Equations	97
3.5.1	The Cauchy Problem	97
3.5.2	Numerical Approximation: General Concepts	97
3.5.3	Numerical Verification of Absolute Stability	101
3.5.4	The Case of Systems of Ordinary Differential Equations	101
3.5.5	Numerical Examples of the Solution of Ordinary Differential Equations	103
3.6	Numerical Solution of Nonlinear Algebraic Equations	106
3.6.1	The Problem of Computing the Zeros of a Function	106
3.6.2	Fixed-Point Iterations	107
3.6.3	The Newton Method	109
3.6.4	The Matlab Built-in Function <code>fzero</code>	110
3.6.5	The Newton Method for Systems of Nonlinear Equations	111
CHAPTER 4	Elements of Physics	113
4.1	Conservation Principles and Balance Laws in Classical Mechanics	113
4.1.1	Balance Laws	115
4.2	Charged Material Points and Their Motion	115
4.3	The Newton Laws of Motion	118
4.4	The Newton Laws, Work, Power, and Energy	119
4.5	Laws of Thermodynamics	121
4.5.1	The Thermodynamic Approach	121
4.5.2	Example: Thermodynamic Description of an Ideal Gas	122
4.5.3	The Concept of Work in Thermodynamics	124
4.5.4	The Concept of Heat in Thermodynamics	126
4.5.5	The First Law of Thermodynamics	127
4.5.6	Energy Balance Law	128
4.5.7	The Second Principle of Thermodynamics	129
4.6	Laws of Electromagnetism	131
4.6.1	The Faraday Experiment	131
4.6.2	The Ampère Experiment	133
4.6.3	The Gauss Law	134
4.6.4	Absence of Magnetic Monopole	135

4.6.5	The Maxwell Equations in Integral Form	136
4.6.6	The Maxwell Equations in Local Form	136
4.6.7	Mathematical Properties of the Maxwell Equations	137
4.6.8	Energy Balance Law Associated With the Maxwell Equations	139
4.7	Motion of Charged Material Points: Illustrative Examples	140
4.7.1	Mass Attached to a Spring	141
4.7.2	First Principles Versus Constitutive Modeling	147
4.7.3	Mass Attached to a Spring With Damping	148
4.8	Motion of a Piston Under the Thermal Expansion of a Gas	152
4.9	Motion of a Charged Particle in an Electromagnetic Field	156
4.9.1	Charged Mass Immersed in an Electromagnetic Field	156
4.9.2	Charged Mass on a Spring Immersed in an Electric Field	163

PART 2 BALANCE LAWS

CHAPTER 5	The Rational Continuum Mechanics Approach to Matter in Motion	175
5.1	Geometrical Space and Placements	176
5.2	Placements, Material Volumes, Mass, and Material Particles	176
5.3	A Closer Look at the Nature of Matter: Particulate and Continuum Perspectives	179
5.4	Motion	180
5.5	Displacement and Deformation	182
5.6	Deformation Gradient	188
5.7	Physical Meaning of J	191
5.8	Deformation Tensors	193
5.9	Strain Tensors	195
5.10	Lagrangian and Eulerian Velocities	196
5.11	Rate of Change of Scalar and Vector Quantities with Respect to Time in the Lagrangian and Eulerian Frameworks	198
5.12	Lagrangian and Eulerian Accelerations	199
5.13	Rate of Change of the Jacobian J With Respect to Time	200
CHAPTER 6	Balance Laws in Integral Form	203
6.1	Balance Law in Integral Form for a Scalar Physical Quantity	203
6.1.1	Balance of Mass	205
6.1.2	Balance of Electric Charge	206
6.1.3	Balance of Energy	206
6.2	Balance Laws in Integral Form for a Vector-Valued Physical Quantity	207
6.2.1	Balance of Linear Momentum	208
6.2.2	Balance of Angular Momentum	209
6.2.3	Balance of Energy Revisited	211
CHAPTER 7	Balance Laws in Local Form	213
7.1	Balance Laws in Local Form	213
7.2	Transport Theorems	214
7.2.1	Leibnitz Transport Theorem	215
7.3	Balance Laws in Local Form: Eulerian Framework	216

7.3.1	Balance of Mass	216
7.3.2	Reynolds Transport Theorem	217
7.3.3	Balance of Electric Charge	218
7.3.4	Balance of Energy	218
7.3.5	Balance of Linear Momentum	219
7.3.6	Balance of Angular Momentum	220
7.3.7	Balance of Energy Revisited	224
7.3.8	Summary of Balance Laws in Eulerian Local Form	224
7.4	Balance Laws in Local Form: Lagrangian Framework	225
7.4.1	Balance of Mass	226
7.4.2	Balance of Electric Charge	226
7.4.3	Balance of Energy	227
7.4.4	Balance of Linear Momentum	228
7.4.5	Balance of Angular Momentum	229
7.4.6	Balance of Energy Revisited	230
7.4.7	Summary of Balance Laws in Lagrangian Local Form	231
CHAPTER 8	Continuum Approach for Multicomponent Mixtures	233
8.1	Homogeneous Mixtures	234
8.2	Heterogeneous Mixtures	235
8.2.1	Mass and Mass Density for Heterogeneous Mixtures	237
8.2.2	Electric Charge and Electric Charge Density for Heterogeneous Mixtures	241
8.3	More on Volume Fractions and Their Meaning in Multicomponent Mixtures	241
8.4	Motion	245
8.5	Balance Laws for Multicomponent Mixtures	247
8.5.1	Balance of Mass	247
8.5.2	Balance of Electric Charge	248
8.5.3	Balance of Linear Momentum	249
8.5.4	Balance of Angular Momentum	251
8.5.5	Balance of Energy	251
8.5.6	Summary of Balance Laws in Eulerian Local Form	252
 PART 3 CONSTITUTIVE RELATIONS		
CHAPTER 9	Preliminary Considerations on Constitutive Modeling	257
9.1	Incompressible Materials	257
9.1.1	Incompressibility and Balance of Mass	258
9.1.2	Incompressibility and Balance of Electric Charge	259
9.2	Homogeneous Materials	260
9.3	Material Volume and Observational Domain	260
9.4	Transport Theorems, Revisited	261
CHAPTER 10	Constitutive Relations for Fluids	263
10.1	Eulerian Description for the Motion of a Fluid	264
10.2	Newtonian Fluids	264

10.2.1	Energy Identity for Isothermal, Compressible, Newtonian Fluids	266
10.3	Isothermal, Homogeneous, Incompressible, Newtonian Fluids:	
	The Navier–Stokes Equations	271
10.3.1	Energy Identity for Isothermal, Homogeneous, Incompressible, Newtonian Fluids	272
10.4	Inviscid Fluids	274
10.4.1	Energy Identity for Isothermal, Compressible, Inviscid Fluids	275
10.5	Nondimensionalization of the Navier–Stokes Equations and the Role of the Reynolds Number	276
10.5.1	Slow Fluid Flow	279
10.5.2	Slow Flows and Time Scale	280
10.5.3	Fast Fluid Flows	281
10.6	Non-Newtonian Fluids	282
10.6.1	Generalized Newtonian Constitutive Laws	282
10.6.2	Bingham Constitutive Law	283
10.6.3	Oldroyd-B Constitutive Law	283
10.7	Heat Conducting Fluids	284
10.7.1	Energy Identity for Heat Conducting Fluids	285
10.8	Boundary Conditions	287
10.9	The Meaning of Stress for a Viscous Fluid: Poiseuille and Couette Flows	288
10.9.1	Poiseuille Flow	289
10.9.2	Couette Flow	291
CHAPTER 11	Constitutive Relations for Solids	295
11.1	Lagrangian Description for the Motion of a Solid	295
11.2	Nonlinear Elasticity	296
11.2.1	Compressible Hyperelastic Materials	296
11.2.2	Incompressible Hyperelastic Materials	301
11.3	Simplified Theory: Infinitesimal Displacements	303
11.3.1	Strain Tensor and Incompressibility Condition in the Simplified Theory	305
11.3.2	Constitutive Relations in the Simplified Theory	306
11.3.3	Isothermal Linear Elasticity	308
11.4	Viscoelasticity	310
11.4.1	Kelvin–Voigt Viscoelastic Model	311
11.4.2	Maxwell Viscoelastic Model	313
11.5	Boundary Conditions	314
11.5.1	Interface Conditions	315
11.6	Effect of Geometry on Stress Distributions Induced by External Loads	316
11.6.1	Particular Solution: Infinite Slab Under Pressure Load	317
11.6.2	Particular Solution: Infinite Cylinder Under Pressure Load	319
11.6.3	Hoop Stress for a Thin-Walled Cylinder	321
11.7	Subtleties of the Thin-Shell Limit	323
CHAPTER 12	Constitutive Relations for Multicomponent Mixtures	327
12.1	Passive Solute Transport in a Fluid Solvent	327

12.2	Fluid Flow Through Deformable Porous Media	331
12.2.1	Case of Incompressible Components	332
12.2.2	The Biot Formulation	334
12.2.3	Boundary Conditions	335
CHAPTER 13	Constitutive Relations in Electromagnetism and Ion Electrodynamics	337
13.1	Electricity and Currents	338
13.2	General Framework to Describe Ion Electrodynamics	339
13.3	The Historical Approach to Ion Motion	341
13.3.1	Kinetic Description of Ions	342
13.4	From Kinetic Description to Continuum Approach via Mixture Theory	346
13.5	Relationship Between the Motion of Charged Particles in the Continuum Approach and the Maxwell Equations	347
13.6	Examples of Mathematical Descriptions of Charged Mixtures	350
13.6.1	Homogeneous Charged Mixtures	350
13.6.2	The Velocity-Extended Poisson–Nernst–Planck Model	363
13.6.3	The Poisson–Nernst–Planck Model	365
13.6.4	Fluxes, Current Densities, and Concentrations	367
13.6.5	The Drift–Diffusion Model for Semiconductors	368
13.7	Heterogeneous Charged Mixtures	371

PART 4 MODEL REDUCTION OF SYSTEM COMPLEXITY

CHAPTER 14	Reduction of the Maxwell Partial Differential System	377
14.1	The Vector Potential	377
14.2	Nondimensionalization and Reduced Maxwell Equations	378
14.3	Derivation of the Kirchhoff Laws for Currents and Voltages	380
14.3.1	The Kirchhoff Current Law	380
14.3.2	The Kirchhoff Voltage Law	381
14.4	Lumped Electrical Elements	383
14.4.1	Independent Sources	383
14.4.2	Resistors	384
14.4.3	Capacitors	385
14.4.4	Inductors	386
14.5	Connecting Elements	387
14.5.1	Connection of Sources	387
14.5.2	Connection of Resistors	388
14.5.3	Connection of Capacitors	388
CHAPTER 15	Electric Analogy to Fluid Flow	391
15.1	Hydraulic Resistors	391
15.1.1	Linear Case: Poiseuille Law	392
15.1.2	Nonlinear Case: Deformable Tubes	394
15.2	Hydraulic Capacitors	400
15.2.1	Tubes as Hydraulic Capacitors	401
15.3	Hydraulic Inductors	402

15.4	Hydraulic Active Elements	403
15.5	Further Considerations on the Flow of a Newtonian Viscous Fluid in a Rigid Tube	404
15.6	Example: Comparison Between Compliant and Collapsible Tubes	405
15.7	Example: Representative Segment Model of the Retinal Microcirculation	408

PART 5 MATHEMATICAL MODELS OF BASIC BIOLOGICAL UNITS AND COMPLEX SYSTEMS

CHAPTER 16	Cellular Components and Functions: A Brief Overview	419
16.1	Glossary of Cellular Components	419
16.2	The Biophysical Functional Units	421
16.3	Signaling Pathways in Cellular Functions	423
CHAPTER 17	Mathematical Modeling of Cellular Electric Activity	425
17.1	Geometrical Representation of a Cell and Its Membrane	425
17.2	Reduced-Order Modeling of the Cell Membrane	427
17.3	Ordinary Differential Equation Models for Cellular Electrophysiology	432
17.3.1	Thermodynamic Equilibrium	433
17.3.2	Local Ordinary Differential Equation Models	436
17.3.3	Whole-Cell Ordinary Differential Equation Models	438
17.4	The Hodgkin-Huxley Model	440
17.5	Generalization of the Hodgkin-Huxley Model	445
17.6	Transmembrane Current Models	446
17.6.1	The Linear Resistor Model	446
17.6.2	The Goldman-Hodgkin-Katz Model	448
17.6.3	A Generalized Nonlinear Resistor Model	451
17.7	The Patch-Clamp Experiment	452
17.7.1	Analysis of the Voltage Patch-Clamp Circuit	454
17.7.2	Analysis of the Current Patch-Clamp Circuit	455
17.7.3	Unified Model for the Patch-Clamp Circuit	456
17.7.4	Study of the VPC Experiment With Voltage Losses	456
CHAPTER 18	Mathematical Modeling of Electric Propagation Along Nerve Fibers	461
18.1	The Geometric Setting	461
18.2	Electric Equivalent Representation	462
18.3	The Cable Equation Model	464
18.4	Cable Equation Model With Nonlinear Transmembrane Resistance	465
CHAPTER 19	Differential Models in Cellular Functions	467
19.1	From Balance Laws to Ordinary Differential Models	467
19.2	Mathematical Model of Astrocyte Dynamics	469
19.2.1	Mathematical Model of Cytosolic Calcium Dynamics	470
19.2.2	Model of IP_3 Dynamics	475
19.2.3	Simulation of the Dynamics of Free Cytosolic Calcium and Inositol Triphosphate in an Astrocyte	476

19.2.4	Mathematical Model of Vasoactive Agent Production	481
19.2.5	Simulation of Vasoactive Agent Production in an Astrocyte	483

PART 6 ADVANCED MATHEMATICAL AND COMPUTATIONAL METHODS

CHAPTER 20	Functional Spaces and Functional Inequalities	497
20.1	Metric Spaces	497
20.2	Complete Metric Spaces	499
20.3	Normed Spaces	502
20.3.1	Linear Functionals, Bilinear Forms and Norms	502
20.4	Banach Spaces	504
20.5	Hilbert Spaces	507
20.6	The Sobolev Space of Order m in One Spatial Dimension	509
20.7	The Sobolev Space of Order m in $\mathbb{R}^{n_{sd}}$, $n_{sd} \geq 2$	513
CHAPTER 21	Functional Iterations for Nonlinear Coupled Systems of Partial Differential Equations	517
21.1	The Nonlinear Differential Model System	517
21.2	Time Semidiscretization	519
21.3	Block Nonlinear Jacobi and Gauss–Seidel Iterations	520
21.3.1	Block Nonlinear Jacobi Iteration	520
21.3.2	Block Nonlinear Gauss–Seidel Iteration	520
21.4	The Abstract Newton Method	522
21.5	Application of Functional Iterations to Biological Models	523
21.5.1	Solution Map for the Cable Equation Model	524
21.5.2	Solution Map for the Poisson–Nernst–Planck Model	525
CHAPTER 22	Time Semidiscretization and Weak Formulations for Initial Value/Boundary Value Problems of Advection–Diffusion–Reaction Type	533
22.1	The One-Dimensional Balance Law	534
22.2	Time Semidiscretization	535
22.3	Examples of Application of the Linear Advection–Diffusion–Reaction Model	536
22.4	Inverse Monotonicity and the Continuous Maximum Principle	538
22.5	Weak Formulations of Boundary Value Problems of Advection–Diffusion–Reaction Type	539
22.5.1	The Displacement-Based Weak Formulation	539
22.5.2	The Mixed Weak Formulation	540
22.6	Weak Formulations and Solution Regularity	541
22.7	Well Posedness Analysis: The Lax–Milgram Lemma	542
22.7.1	The Lax–Milgram Lemma	542
22.7.2	Well-Posedness of the Displacement-Based Weak Formulation	543
22.7.3	Well-Posedness of the Mixed Weak Formulation	544
CHAPTER 23	Finite Element Approximations of Boundary Value Problems of Advection–Diffusion–Reaction Type	547

23.1	Finite Element Spaces	547
23.1.1	Basis Functions	549
23.1.2	The Displacement-Based Galerkin Finite Element Formulation	550
23.1.3	The Mixed Finite Element Formulation	552
23.1.4	Implementation of the Mixed Method as a Displacement-Based Formulation	555
23.1.5	Numerical Evaluation of Matrix Entries	557
23.1.6	Comparison Between the Displacement-Based and the Mixed Finite Element Methods	559
23.2	Balance and Flux Density Approximation	562
23.2.1	Discrete Balance	562
23.2.2	Flux Density Approximation	562
23.2.3	The Case of a Constant Flux Density	563
23.3	Mixed Finite Element Approximation of One-Dimensional Model Problems	566
23.3.1	The Discrete Maximum Principle	566
23.3.2	The Diffusion Boundary Value Problem	567
23.3.3	The Reaction-Diffusion Boundary Value Problem	568
23.3.4	The Advection-Diffusion Boundary Value Problem	569
23.4	Stabilization Techniques	571
23.4.1	Stabilization of the Reaction-Diffusion Boundary Value Problem	571
23.4.2	Stabilization for the Advection-Diffusion Boundary Value Problem	572
23.5	Convergence Analysis of the Mixed Finite Element Method	574
23.5.1	Examples of Convergence of the Mixed Galerkin Finite Element Method for Advection-Diffusion Problems	576
CHAPTER 24	Finite Element Approximations of Initial Value/Boundary Value Problems of Advection-Diffusion-Reaction Type	579
24.1	The Time-Dependent Advection-Diffusion-Reaction Problem	580
24.1.1	Convergence Examples in the Time-Dependent Case	582
24.2	Simulation of the Propagation of an Action Potential Along an Axon	583
24.2.1	Model Data	583
24.2.2	Action Potential	584
24.2.3	Overview	585
24.2.4	Comparison and Concluding Remarks	590
24.3	Poisson-Nernst-Planck Simulation of an Ideal One-Dimensional Ion Channel	590
24.3.1	Model Data	591
24.3.2	Simulation Results	592
24.4	Concluding Remarks	594
CHAPTER 25	Finite Element Approximation of a Unified Model for Linear Elastic Materials	597
25.1	The Navier-Lamé Model of Linear Elasticity	598
25.2	The Weak Formulation of the Navier-Lamé System	599
25.3	Two-Dimensional Elasticity	600
25.3.1	Plane Stress	600
25.3.2	Plane Strain	601

25.4	Galerkin Finite Element Approximation of the Navier–Lamé System	601
25.5	The Limit $\lambda_L \rightarrow +\infty$ and the Displacement-Based Formulation: a Case to Be Handled With Care!	604
25.6	A Two-Field Model for Compressible and Incompressible Elasticity	608
25.7	Weak Formulation of the Two-Field Model	610
25.8	Abstract Form of the Herrmann System	611
25.9	Well-Posedness Analysis of the Two-Field Model	613
25.10	Galerkin Finite Element Approximation of the Two-Field Model	614
25.11	Unique Solvability and Error Analysis	616
25.12	The Importance of Satisfying the Discrete Inf-Sup Condition: Spurious Pressure Modes	619
25.13	Finite Elements for Incompressible Elasticity	619
	25.13.1 Discontinuous Pressures	620
	25.13.2 Continuous Pressures	622
25.14	Numerical Example: Locking and Pressure Spurious Modes	624
	25.14.1 Discontinuous Pressure Finite Element Space	625
	25.14.2 Continuous Pressure Finite Element Space	626
25.15	Concluding Remarks	628

PART 7 SIMULATION EXAMPLES AND CLINICAL APPLICATIONS

CHAPTER 26	Ion Dynamics in Cellular Membranes	633
26.1	Ion Pumps and Exchangers	633
	26.1.1 The Sodium–Potassium ATPase Pump	634
	26.1.2 The Calcium–Sodium Exchanger	634
	26.1.3 The Chloride–Bicarbonate Exchanger	634
	26.1.4 The Sodium–Proton Exchanger	635
26.2	The Mathematical Model of Ion Pumps and Exchangers	635
	26.2.1 Geometrical Description of the Problem	636
	26.2.2 Boundary and Initial Conditions	638
	26.2.3 The Volumetric Force Acting on the Intrapore Fluid	640
26.3	Case Study: Ion Pumps and Exchangers in the Context of Aqueous Humor Production	641
	26.3.1 Anatomy, Physiology, and Clinical Relevance of Aqueous Humor Production	641
	26.3.2 Numerical Simulations	643
CHAPTER 27	Interaction Between Hemodynamics and Biomechanics in Ocular Perfusion	653
27.1	Mathematical Model	655
27.2	Boundary and Initial Conditions	656
27.3	Existence Results	657
	27.3.1 Definition of Weak Solutions	658
	27.3.2 Main Existence Theorems	660
	27.3.3 Practical Implications of Existence Theorems	661
27.4	One-Dimensional Poroviscoelastic Model: Description and Formulation	662

27.5	Explicit Solution in a One-Dimensional Case	663
27.6	Dimensional Analysis	663
27.7	Simulation Results	665
27.8	Perspectives	669

PART 8 EXAMPLES, EXERCISES, AND PROJECTS

CHAPTER 28	Coding of Examples Using Matlab Scripts	673
28.1	Examples for Part 1	673
28.1.1	Elements of Mathematical Methods	673
28.1.2	Elements of Computational Methods	675
28.1.3	Elements of Physics	690
28.2	Examples for Part 4	699
28.2.1	Numerical Comparison Between Compliant and Collapsible Tubes ...	699
28.2.2	Numerical Simulation of the Representative Segment Model for Retinal Microcirculation	701
28.3	Examples for Part 5	707
28.3.1	Numerical Solution of the Hodgkin-Huxley Model	708
28.3.2	Numerical Simulation of the Patch-Clamp Experiment	709
28.3.3	Numerical Simulation of the Coupled Dynamics Between Cytosolic Free Calcium and IP_3 in an Astrocyte	710
28.3.4	Numerical Simulation of Vasoactive Agent Production in an Astrocyte .	714
28.4	Examples for Part 6	719
28.4.1	Functional Analysis	719
28.4.2	Finite Element Approximations: The Stationary Case	723
28.4.3	Finite Element Approximations: The Time-Dependent Case	727
28.4.4	Numerical Simulation of the Propagation of an Action Potential Along an Axon	731
28.4.5	Finite Element Approximation of Linear Elastic Materials	736
CHAPTER 29	Matlab Functions for Algorithm Implementation	737
29.1	Matlab Functions for Part 1	737
29.1.1	Functions Used in Chapter 3	737
29.1.2	Functions Used in Chapter 4	741
29.2	Matlab Functions for Part 4	743
29.2.1	Functions Used in Chapter 15	743
29.3	Matlab functions for Part 5	747
29.3.1	Numerical Study of the Hodgkin-Huxley Model	747
29.3.2	Numerical Simulation of the Patch-Clamp Experiment	750
29.3.3	Propagation of an Action Potential Along an Axon	752
29.3.4	Numerical Simulation of the Coupled Dynamics of Free Cytosolic Calcium and IP_3 in an Astrocyte	755
29.3.5	Numerical Simulation of Vasoactive Agent Production in an Astrocyte .	760
29.4	Matlab Functions for Part 6	765
29.4.1	Functions Used in Chapter 23	765

CHAPTER 30	Homework: Exercises and Projects	771
30.1	Exercises and Projects for Part 1	771
30.2	Exercises and Projects for Part 2	775
30.3	Exercises and Projects for Part 3	777
30.4	Exercises and Projects for Part 4	779
30.5	Exercises and Projects for Part 5	780
30.6	Exercises and Projects for Part 6	782
30.7	Exercises and Projects for Part 7	785
Appendix A	Elements of Differential Geometry and Balance Laws in Curvilinear Coordinates	787
A.1	Curvilinear Coordinates	787
A.2	Base Vectors and Metric Tensor	789
A.3	Covariant and Contravariant Entities	792
A.4	Differential Calculus in Curvilinear Coordinates	794
A.4.1	Partial Derivatives of a Scalar Function	794
A.4.2	Partial Derivatives of a Vector	794
A.4.3	Divergence of a Vector	798
A.4.4	Curl of a Vector	799
A.4.5	Partial Derivatives of a Tensor	799
A.4.6	Divergence of a Tensor	799
A.5	Differential Operators in Orthogonal Curvilinear Coordinates	799
A.5.1	Orthogonal Curvilinear Coordinates	800
A.5.2	Cylindrical Coordinates	800
A.5.3	Spherical Coordinates	801
A.6	Balance Laws in Curvilinear Coordinates	801
A.6.1	Balance Laws in Eulerian Local Form	801
A.6.2	Balance Laws in Lagrangian Local Form	802
	Bibliography	805
	Index	819
