1. Zoonotic Potential of Emerging Paramyxoviruses: Knowns and Unknowns	1
Patricia A. Thibault, Ruth E. Watkinson, Andres Moreira-Soto, Jan F. Drexler, and Benhur Lee	
1. Introduction	2
2. Known Highly Lethal Emergent Paramyxoviruses: Nipah Virus and Hendra Virus	6
3. Unknown Zoonotic Potential of Paramyxoviruses	14
4. Ecological Factors Driving Zoonotic Paramyxovirus Emergence	18
5. Virus-Host Molecular Interactions Affecting Paramyxovirus Emergence	26
6. Summary	39
Acknowledgments	40
References	40
2. Metabolomics: Strategies to Define the Role of Metabolism in Virus Infection and Pathogenesis	57
Marianne Manchester and Anisha Anand	
1. Introduction	58
2. Metabolomics Analytical Strategy and Study Design	59
3. Using Metabolomics to Characterize Viral Infections	62
4. Metabolomics to Discover Target Networks for Broad Spectrum Antivirals	74
5. Conclusions and Future Trends	75
References	75
3. The Envelope Proteins of the <i>Bunyavirales</i>	83
Pablo Guardado-Calvo and Félix A. Rey	
1. Introduction	84
2. Bunyavirus Entry Into Cells	87
3. Bunyavirus Gc Is a Class II Fusion Protein	89
4. The Target Membrane-Interacting Region	95
5. pH-Sensing Mechanisms	97
6. Lipid Sensing	100
7. The Stem Region	100
8. Newly Identified pGc-Like Envelope Proteins	102

9. Projections for Gc From Other Members of the <i>Bunyavirales</i> Order	103
10. Hantavirus Gn Is Homologous to Alphavirus E2	104
11. Discussion	107
References	113
4. Insect-Specific Viruses: A Historical Overview and Recent Developments	119
Christopher M. Roundy, Sasha R. Azar, Shannan L. Rossi, Scott C. Weaver, and Nikos Vasilakis	
1. Introduction	120
2. Background	122
3. Biological Characteristics of Value	125
4. Specific Viral Families	127
5. Conclusions and Future Perspectives	138
Acknowledgments	140
References	140
