1. Advancement of Metabolomics Techniques and Their Applications in Plant Science: Current Scenario and Future Prospective

Ashok Panda, Asish K. Parida and Jaykumar Rangani

1. Introduction	1
2. Recent Advancements in Metabolomics Study	2
2.1 Advances in the Techniques of Nuclear Magnetic Resonance	7
2.2 Advances in the Techniques of Mass Spectroscopy	10
3. Importance of Sample Preparation in Metabolomics	12
4. Processing of Metabolomics Data	13
5. Applications of Metabolomics in Plant Science	15
5.1 Metabolomics in Deciphering Abiotic Stress Tolerance Mechanisms of Plants	16
5.2 Metabolomics in Deciphering Biotic Stress Tolerance Mechanisms of Plants	19
5.3 Metabolomics in Characterization of Herbal Medicines and Natural Products	20
5.4 Role of Metabolomics in Chemotaxonomy and Differentiation of Ecotypes	24
6. Conclusion and Future Prospects	25
Acknowledgments	26
References	26

2. Metabolomics of Seaweeds: Tools and Techniques

Bhakti Tanna and Avinash Mishra

1. Introduction	37
1.1 Seaweeds	37
1.2 Metabolomics: An Overview	37

2. Sampling	39
2.1 Sampling and Sample Storage	39
2.2 Sample Preparation	39
3. Analytical Techniques	39
3.1 Mass Spectrometry	40
3.2 Nuclear Magnetic Resonance	43
4. Spectral Processing	43
5. Biological Activity of Algal Metabolites	46
6. Conclusion and Future Prospects	47
Acknowledgments	47
References	47

3. Environmental Stresses and Metabolomics—Deciphering the Role of Stress Responsive Metabolites

Mohammad A. Ahanger, Fahima Gul, Parvaiz Ahmad and Nudrat A. Akram

1. Introduction	53
2. Stresses: Reactive Oxygen Species Production and Significance	54
3. Metabolites and Plant Growth	54
4. Metabolites and Antioxidant Activity—Revisiting the Redox Buffers	55
4.1 Carotenoids	55
4.2 Tocochromanols—Vitamin E Family	56
4.3 Glutathione	57
4.4 Ascorbate	58
4.5 Osmotic Constituents	59
4.6 Pyridine Nucleotides—Versatile Role of Small Molecules	61
5. Conclusion and Future Prospects	62
References	62

4. Differential Responses of Plants to Biotic Stress and the Role of Metabolites

Maham Saddique, Muhammad Kamran and Muhammad Shahbaz

1. Biotic Stress in Plants	69
1.1 Bacterial Infection	69
1.2 Viral Infection	69
1.3 Fungal Infection	69

1.4 Herbivory: Insects and Nematodes	70	2.1 Water Stress	135
1.5 Weeds	70	2.2 Salt Stress	138
2. Responses of Plants to Biotic Stresses	71	3. Common Metabolic Plant Responses to Drought and Salt Stresses	140
2.1 Plant Responses to Viral Infections	71	4. Conclusion	141
2.2 Plant Responses to Fungal Infection	72	5. Future Prospects	141
2.3 Plant Responses to Herbivory	72	References	141
3. Plant Direct Defenses	73	Further Reading	144
3.1 Morphological Structures	73		
3.2 Trichomes	73		
4. Plant Metabolites	73	7. Vitamins and Environmental Stresses in Plants	
4.1 Primary Metabolites	73	<i>David Jiménez-Árias, Francisco J. García-Machado, Saray Morales-Sierra, Cristina Garrido-Orduña, Andrés A. Borges, Francisco V. González and Juan Cristo Luis Jorge</i>	
4.2 Secondary Metabolites	73		
5. Indirect Defenses	78	1. Introduction	145
5.1 Herbivore-Induced Plant Volatiles	78	2. Vitamin Biosynthesis, Developmental and Environmental Regulation	145
5.2 Defense Elicitors (Insect Oral Secretion)	79	3. Antioxidant Action	147
References	80	4. Vitamins Protection Under Biotic Stress	147
		4.1 Vitamin B ₁	148
		4.2 Vitamin B ₂	149
		4.3 Menadione Sodium Bisulfite	149
		4.4 Folic Acid	150
		5. Vitamin Biofortification	150
		6. Conclusion and Future Prospects	150
		References	150
		Further Reading	152
5. Metabolomics-Guided Elucidation of Abiotic Stress Tolerance Mechanisms in Plants		8. Environmental Stress and Secondary Metabolites in Plants: An Overview	
<i>Asish K. Parida, Ashok Panda and Jaykumar Rangani</i>		<i>Muhammad A. Ashraf, Muhammad Iqbal, Rizwan Rasheed, Iqbal Hussain, Muhammad Riaz and Muhammad Saleem Arif</i>	
1. Introduction	89	1. Introduction	153
2. Advances in the Techniques for Metabolomics Study	90	2. Nitrogen-Containing Compounds	153
3. Metabolomics Workflow	91	2.1 Phenolics	154
4. Data Analysis	92	2.2 Terpenes	154
5. Role of Metabolites in Plant's Tolerance to Various Abiotic Stresses	93	2.3 Other Plant Secondary Metabolites	156
5.1 Salinity-Induced Alteration in Various Metabolites	94	3. Functions of Plant Secondary Metabolites	157
5.2 Drought-Induced Alteration in Different Metabolites	101	4. Role of Secondary Metabolites Under Environmental Stresses	157
5.3 Waterlogging-Induced Alteration in Different Metabolites	107	4.1 Biotic Stresses	158
5.4 Alteration of Metabolites in Response to Temperature Extremes	109	4.2 Abiotic Stresses	158
5.5 Metabolic Alterations in Response to High Light Intensity	114	5. Conclusion and Future Prospects	163
5.6 Alterations of Different Metabolites Associated With Nutrient Deficiency	115	References	163
5.7 Heavy Metal-Induced Alteration in Different Metabolites	118		
6. Conclusion and Future Prospects	120	9. Engineering of Biomass Accumulation and Secondary Metabolite Production in Plant Cell and Tissue Cultures	
Acknowledgment	121	<i>Pinar Nartop</i>	
References	121	1. Introduction	169
		2. Classification of Secondary Metabolites	169
6. Metabolomic Approach to Understand Plant Adaptations to Water and Salt Stress			
<i>Analia Llanes, Andrea Andrade, Sergio Alemano and Virginia Luna</i>			
1. Introduction	133		
2. Metabolic Responses of Plants to Abiotic Stress	134		

3. Steps of Plant Secondary Metabolite Production in In Vitro Conditions	171	2.2 Changes Associated with Carbohydrate Molecules	218
4. Optimization of Medium Composition and Culture Conditions	173	2.3 Amino Acid Changes Accompanying a Pathogen Encounter	218
4.1 Medium Type	173	3. Impact of Primary Metabolic Variations in Plant Physiology	219
4.2 Sucrose Content	175	3.1 Generation of Reactive Oxygen Species	219
4.3 Nitrate and Phosphate Content	175	3.2 Cytoskeleton Manipulations	220
4.4 Plant Growth Regulators	175	3.3 Signaling Associated with Cell Apoptosis	221
5. Elicitation and Precursor Feeding	176	3.4 PR Proteins Dependent Transformations	222
5.1 Elicitation	176	4. Variations in Secondary Metabolite	222
5.2 Precursor Feeding	178	4.1 SA- and JA-Centric Regulation of Plant Immunity	222
6. Biotransformation and Metabolic Engineering	180	4.2 Role of Abscissic Acid (ABA) in Plant Defense	222
7. Immobilization	181	4.3 Role of Ethylene	223
8. Hairy Root Cultures	183	4.4 Role of Nitric Oxide in Plant Defense	223
9. Bioreactors	185	5. Transcriptional Regulation of Pathogenesis	224
10. Combinatorial Biosynthesis	189	6. Conclusion and Future Prospects	224
11. Conclusion	189	Acknowledgments	225
References	189	References	225
Further Reading	194		
10. Metabolic Responses of Plants Upon Different Plant-Pathogen Interactions		12. Effect of Root-Associated Bacteria on Soluble Sugar Metabolism in Plant Under Environmental Stress	
<i>Miguel A. Matilla</i>		<i>Yachana Jha and R.B. Subramanian</i>	
1. Introduction	195	1. Introduction	231
2. Plant-Pathogen Interactions	196	2. Isolation and Identification of Root-Associated Bacterial Isolates	231
2.1 Recognition Process	196	3. Effect of Root-Associated Bacteria on Soluble Sugar in Plant Growth Response	233
2.2 Elicitors and Plant Innate Immunity	197	4. Effect of Root-Associated Bacteria on Plant Vascular Tissue and Sugar Metabolism	234
3. Metabolic Aspects Involved in Pathogenesis	200	4.1 Effect on Lignin	234
3.1 Participation of 14-3-3 Proteins	200	5. Effect of Root-Associated Bacteria on Soluble Sugar in Plant Under Biotic Stress	235
3.2 Oxidative-Burst	201	6. Effect of Root-Associated Bacteria on Accumulation of Soluble Sugar in Plant Under Abiotic Stress	237
3.3 Ca ²⁺ Burst	202	7. Effect of Root-Associated Bacteria on Sugar Signaling for Differential Gene Expression in Plant Under Abiotic Stress	237
4. Calmodulin in Plant Defense	203	8. Conclusion and Future Prospects	238
5. Root Exudates and Pathogenicity in Plants	203	References	239
5.1 Root Exudates Constitute a Convuluted Cocktail	204		
5.2 Exudation Mechanisms	204		
5.3 Phytoalexins	205		
6. Concluding Remarks	206		
Acknowledgments	206		
References	206		
11. Primary Plant Metabolism During Plant-Pathogen Interactions and Its Role in Defense			
<i>Belur S. Kumudini, Nellickal S. Jayamohan, Savita V. Patil and Mallu Govardhana</i>			
1. Introduction	215		
2. Variations in Primary Metabolites	216		
2.1 Photosynthesis Reduction During Plant Defense	216		

13. Metabolic Responses of Sugarcane Plants Upon Different Plant-Pathogen Interactions

María E. Legaz, Elena Sánchez-Elordi, Rocío Santiago, Roberto de Armas, Blanca Fontaniella, Ana M. Millanes, María Blanch and Carlos Vicente

1. Introduction	241
1.1 Production of Soluble Polysaccharides by Sugarcane Plants as a Response to Stress, Mechanical Injuries, or Impairment	242
1.2 Chemical Structure of Soluble Polysaccharides of Sugarcane Plants	243
1.3 Soluble Polysaccharides of Sugarcane Plants Are Usually Associated with Proteins	244
2. Sugarcane Plants Produce Glycoproteins as a Response to Invasion by Several Endosymbionts: <i>Gluconacetobacter</i> , <i>Xanthomonas</i> , <i>Sporisorium</i>	247
3. Sugarcane Plant Glycoproteins Produce Endosymbiont Cytoagglutination: Identification of Their Ligands	247
3.1 Cytoagglutination of <i>Gluconacetobacter diazotrophicus</i>	247
3.2 Cytoagglutination of Smut Teliospores	249
4. Cytoagglutination Is Followed by Modifications of Infectivity of <i>Xanthomonas albilineans</i>	250
4.1 Sugarcane Can Regulate Xanthan Production by <i>Xanthomonas albilineans</i>	250
4.2 Albicidin: a Unique Feature of <i>Xanthomonas albilineans</i>	251
4.3 Purification and Properties of an Unusual UDP-Glucose Dehydrogenase, NADPH-Dependent, From <i>Xanthomonas albilineans</i>	252
4.4 Sugarcane Glycoproteins Are Required for the Production of an Active UDP-Glucose Dehydrogenase by <i>Xanthomonas albilineans</i>	253
4.5 Modifications of Sucrose Crystallization by Xanthans Produced by <i>Xanthomonas albilineans</i>	253
4.6 Inhibition of the Germination of <i>Sporisorium</i> Teliospores	254
5. Enzymatic Nature of the Sugarcane Glycoproteins	257
5.1 Arginase	257
5.2 Fungal Cell Wall Hydrolytic Enzymes	257
5.3 Dirigent Proteins	258

6. Chemotactic Role of the Sugarcane Glycoproteins: False Quorum Effect on <i>Sporisorium</i> Teliospores	258
6.1 Quorum Sensing: Cell-to-Cell Communication	258
6.2 "Unity Makes Strength": Cytoagglutination of Smut Teliospores by the Action of a Fungal Arginase	259
6.3 Arginase Role in Sugarcane Plant Defense	260
6.4 Both Plant and Fungal Arginases Compete for Binding to Teliospore Cell Wall Ligands	262
7. Role of the Cytoskeleton in the Chemotaxis of <i>Sporisorium scitamineum</i>	262
7.1 Chemotactic Strategy	262
7.2 Role of the Cytoskeleton in Chemotaxis	263
7.3 Motility of Smut Teliospores in Chemotaxis	264
7.4 The Role of Cytoskeleton in <i>Sporisorium scitamineum</i> Chemoattraction During Fungus-Sugarcane Interaction	265
8. Sugarcane Plants Develop Alternative Defense Pathways: Synthesis of Phenols, Lignans, and Lignins	265
8.1 Factors Affecting the Development of <i>Sporisorium</i> Mycelium: Growth of <i>Sporisorium scitamineum</i>	269
8.2 Caffeic Acid as a Possible Mycotoxin	269
8.3 Pinoresinol as a Possible Mycotoxin	270
9. Sugarcane Develop Alternative Defense Pathways: Polyamines	270
9.1 Polyamines: Nature, Metabolism, and Biological Functions	270
9.2 Polyamines in Sugarcane as Defense Against Pathogens	273
10. Conclusions	274
11. Future Prospects	274
References	275
Further Reading	280

14. Coordinated Regulation of Photosynthesis in Plants Increases Yield and Resistance to Different Types of Environmental Stress

Hans-Werner Koyro and Bernhard Huchzermeyer

1. Introduction	281
2. Influence of Stress on Water Relations	282
3. Impact on Gas Exchange	282
4. Ionic and Osmotic Load	283
5. Stress Effects on Structure and Function of Thylakoid Membranes	284
5.1 Harvesting Light Energy	284
5.2 Conversion of Harvested Energy to Drive Metabolism	285

6. Stress Effects on CO ₂ Assimilation and Export of Carbohydrates	288	3. Proline Accumulation Alters Homeostasis in Plant Tissues Under Environmental Constraints	327
6.1 Adaptation to Light Supply	290	3.1 Apoptosis Regulation Is Associated With the Pyrroline-5-carboxylic Acid Cycle	329
6.2 Stress Effects Specific to C ₄ Plants	291	3.2 Proline Acts as an Antioxidant	329
7. Reactive Oxygen Species Production and Detoxification	293	3.3 Transporters of Proline	330
8. Stress-Induced Changes in Metabolite Patterns	294	3.4 Proline Mediates Flower Transition	330
8.1 Production of Compatible Solutes	296	4. Whether or Not Ornithine Aminotransferase Mediates Nitrogen Recovery	330
8.2 Production of Antioxidants	297	5. Proline Plays Essential Role in Pollen Development	331
8.3 Reactive Oxygen Species and Metabolites Controlling Metabolic or Physiological Functions	298	6. Proline Mediates Seed Development	331
9. Developing Concepts to Improve Stress Resistance and Increase Crop Yield	300	7. Conclusions and Future Perspectives	332
9.1 Measuring Chlorophyll Fluorescence	301	References	332
9.2 Parameters to Monitor Plant Performance	303		
9.3 Improvement of the Habitat	304		
10. Conclusions	305	17. Mechanism of Proline Biosynthesis and Role of Proline Metabolism Enzymes Under Environmental Stress in Plants	
References	305	<i>Ágnes Szepesi and Réka Szöllösi</i>	
15. Physiological and Biochemical Mechanisms of Drought Stress Tolerance in the Argan Tree		1. Introduction	337
<i>Abdelghani Chakhchar, Mouna Lamaoui, Salama Aissam, Abderrahim Ferradous, Said Wahbi, Abdelhamid El Mousadik, Saad Ibensouda-Koraichi, Abdelkarim Filali-Maltouf and Cherkaoui El Modafar</i>		2. Proline Biosynthesis and Degradation in Plants	337
1. Introduction	311	3. Proline and Abiotic Stress Factors	338
2. Materials and Methods	312	3.1 Salinity	339
2.1 Plant Materials and Experimental Design	312	3.2 Drought	339
2.2 Physiological and Biochemical Traits	313	3.3 Chilling and Heat Stress	339
2.3 Statistical Analysis	314	3.4 Heavy Metals	342
3. Results and Discussion	314	4. Proline Metabolism During Plant Biotic Stress	346
4. Conclusion	319	5. Proline and Redox Signaling in Plants	347
Acknowledgments	320	6. Posttranscriptional Modification Processes of Proline Metabolism Enzymes	347
References	320	7. Proline and Other Signal Pathways in Plants	347
		8. Future Perspectives	348
		List of Abbreviations	348
		References	348
		Further Reading	353
16. Dynamic Proline Metabolism: Importance and Regulation in Water-Limited Environments		18. Flooding Stress in Plants and Approaches to Overcome	
<i>Muhammad A. Ashraf, Muhammad Iqbal, Rizwan Rasheed, Iqbal Hussain, Shagufta Perveen and Saqib Mahmood</i>		<i>Sakshi Tewari and Anurag Mishra</i>	
1. Introduction	323	1. Introduction	355
2. Enzymes Involved in the Regulation of Proline Metabolism	327	2. Impact of Flooding	356
		3. Mechanisms Underlying Flood Tolerance	356
		3.1 Shift in Metabolism	357
		3.2 Antioxidative Activity	357
		3.3 Heat Shock Transcription Factors	358
		3.4 Osmoprotectants	358

4. Role of Metabolomics in Flood Tolerance	359	21. Involvement of Mitogen-Activated Protein Kinases in Abiotic Stress Responses in Plants	
5. Metabolomic Resources	361	<i>Rinukshi Wimalasekera and Günther F.E. Scherer</i>	
6. Conclusion and Future Prospects	362	1. Introduction	389
Acknowledgments	362	2. Plant MAPK Cascades	389
References	362	3. MAPK Cascades in Abiotic Stress Signaling	390
		3.1 Drought Tolerance	390
19. Small Heat Shock Proteins: Structural Assembly and Functional Responses Against Heat Stress in Plants		3.2 Salt Tolerance	391
<i>Aditya Banerjee and Aryadeep Roychoudhury</i>		3.3 Cold and Heat Tolerance	391
1. Introduction	367	3.4 Reactive Oxygen Species and Ozone	392
2. Small Heat Shock Proteins: Structural Significance	368	3.5 Wounding	392
2.1 Structural Evidences of Dimeric Small Heat Shock Proteins: Building Blocks	368	4. Perspectives	392
2.2 Oligomeric Structures Formed by Small Heat Shock Proteins	368	References	392
2.3 The Dynamic Subunit Exchange Model in Small Heat Shock Proteins	369	22. Sugar Signaling Under Abiotic Stress in Plants	
3. Functional Aspects of Small Heat Shock Proteins: Chaperone Activities	370	<i>Giselle M.A. Martínez-Noël and Jorge A. Tognetti</i>	
4. Evidences of Plant Small Heat Shock Proteins Conferring Protection Against Heat Stress	371	1. Introduction	397
5. Conclusion	373	2. Variation in Sugar Levels in Plants Under Abiotic Stress	397
6. Future Perspectives	373	3. Sugars Acting as Signals, and Their Sensors	398
Acknowledgments	374	3.1 Monosaccharides: Glucose and Fructose Sensing	398
References	374	3.2 Disaccharides: Sucrose and Trehalose Sensing	399
		3.3 Other Sugars	399
20. Silicon-Mediated Alleviation of Stresses in Plants		4. Sugar Signaling Networks	399
<i>Abbu Zaid, Fahima Gul, Mohammad A. Ahanger and Parvaiz Ahmad</i>		4.1 Sucrose Nonfermenting Related Kinases	399
1. Introduction	377	4.2 Target of Rapamycin	400
2. Silicon Occurrence, Uptake, and Role in Plant Metabolism	377	4.3 SnRK—Target of Rapamycin Interplay	401
3. Role in Plant Metabolism	378	5. Interactions Between Sugar Signals and Hormones or Other Stimuli in Plants Under Stress	401
4. Silicon-Mediated Alleviation of Stresses	379	5.1 Abscissic Acid	401
4.1 Silicon and Antioxidant System	380	5.2 Ethylene	401
4.2 Silicon and Osmotic Stress	380	5.3 Auxin	402
4.3 Silicon and Phytohormones	381	5.4 Cytokinin	402
4.4 Silicon and Enzyme Activity	381	5.5 Gibberellins	402
4.5 Silicon and Cell Wall Synthesis/Protection	382	5.6 Brassinosteroids	402
5. Conclusion and Future Prospects	382	5.7 Reactive Oxygen Species	403
References	382	5.8 Environmental Stimuli	403
		6. Concluding Remarks and Future Prospects	403
		References	404

23. Gene Expression Analysis in Medicinal Plants Under Abiotic Stress Conditions

Sanchita and Ashok Sharma

1. Introduction	407
2. Gene Expression Analysis and Its Impact	408
3. Abiotic Stresses and Its Effects	408
4. Medicinal Plants and Secondary Metabolism	410
5. Studies on Change in Gene Expression Patterns in Medicinal Plants due to Abiotic Stresses	410
6. Conclusion and Future Prospects	411
Acknowledgments	412
References	412

3. Relationship Between Nutrient Solution and Gas Exchange	417
4. Relationship Between Nutrient Solution and Ionic Accumulation	418
5. Relationship Between Nutrient Solution and Growth Analysis	420
6. Conclusion	421
7. Future Prospects	421
Acknowledgments	421
References	421

Index	427

24. Plant Physiological Responses to Nutrient Solution: An Overview

Daniel Baron, Amanda C.E. Amaro, Felipe G. Campos, Carmen S.F. Boaro and Gisela Ferreira

1. Introduction	415
2. Relationship Between Nutrient Solution and Hydroponic System	416
