Preface

xv

Section I

Computational Approaches

1. Physical Accuracy Leads to Biological Relevance: Best Practices For Simulating Ligand-Gated Ion Channels Interacting With General Anesthetics **3**

Sruthi Murlidaran and Grace Brannigan

- | | |
|--|----|
| 1. Introduction | 4 |
| 2. MD Simulation Involving pLGICs | 4 |
| 3. Discovery of Candidate Sites | 5 |
| 4. Calculation of Absolute and Relative Binding Affinities | 17 |
| 5. Summary | 22 |
| References | 23 |

2. Computational Approaches to Studying Voltage-Gated Ion Channel Modulation by General Anesthetics **25**

Eleonora Gianti and Vincenzo Carnevale

- | | |
|--|----|
| 1. Voltage-Gated Ion Channels | 26 |
| 2. Structural Approaches to Studying Functional States | 33 |
| 3. Detection of Binding Sites and Access Pathways | 34 |
| 4. Predicting Binding Affinity | 43 |
| 5. Summary and Future Perspectives | 46 |
| References | 47 |

3. Molecular Mechanics Parameterization of Anesthetic Molecules **61**

Thomas T. Joseph and Jérôme Hénin

- | | |
|--|----|
| 1. Introduction | 62 |
| 2. Overview of Parameterization Method | 64 |
| 3. Methods for Choosing Parameters | 67 |
| 4. Summary | 75 |
| Acknowledgments | 75 |
| References | 75 |

4. Insights Into Receptor-Based Anesthetic Pharmacophores and Anesthetic-Protein Interactions 77

Victoria S. Fahrenbach and Edward J. Bertaccini

- 1. Introduction 78
- 2. Homology Modeling 80
- 3. Receptor-Based Pharmacophore Based on Anesthetics Complexed With Non-LGIC Proteins 88
- 4. Summary and Conclusions 92
- References 93

5. Understanding Anesthetic Mechanisms: Analysis of the Complex Kinetics of Ligand-Gated Ion Channels 97

Robert S. Cantor

- 1. Introduction 98
- 2. Methods 99
- 3. Discussion 104
- 4. Conclusions 108
- Acknowledgment 109
- References 109

Section II Genetics and Model Organisms

6. General Genetic Strategies 113

Louise M. Steele and Philip G. Morgan

- 1. Introduction 114
- 2. Organisms 114
- 3. Endpoints 120
- 4. Strategies 123
- References 130

7. Approaches to Anesthetic Mechanisms: The *C. elegans* Model 133

Louise M. Steele and Margaret M. Sedensky

- 1. Introduction 134
- 2. Exposing Worms to Volatile Anesthetics 135
- 3. Behavioral Assays 142
- 4. Summary and Conclusion 150
- Acknowledgment 150
- References 150

8. Using <i>Drosophila</i> to Understand General Anesthesia: From Synapses to Behavior	153
Shanker Karunanithi, Michael Troup, and Bruno van Swinderen	
1. Multiple Levels of General Anesthetic Action: From Proteins to Circuits to Connectivity	154
2. <i>Drosophila melanogaster</i> : A Model for Anesthesia Research	156
3. Behavioral Endpoints: Startle-Induced Locomotion	159
4. Synaptic Endpoints: Recordings From Individual Boutons	163
5. Conclusion	172
References	173
9. High-Throughput Screening to Identify Anesthetic Ligands Using <i>Xenopus laevis</i> Tadpoles	177
Kellie A. Woll and Roderic G. Eckenhoff	
1. Introduction	177
2. <i>X. laevis</i> Model Organism	178
3. Ligand Physicochemical Properties and Dose Preparation	180
4. Behavioral Assessments	181
5. Screening of Nonvolatile Anesthetics	182
6. Screening of Volatile Anesthetics	183
7. Additional Considerations for Novel and/or Chemically Active Ligands	185
8. Conclusions	186
Acknowledgment	186
References	186
10. Zebrafish: A Pharmacogenetic Model for Anesthesia	189
Victoria Bedell, Elena Buglo, Daniel Marcato, Christian Pylatiuk, Ralf Mikut, Johannes Stegmaier, Will Scudder, Maxwell Wray, Stephan Züchner, Uwe Strähle, Ravindra Peravali, and Julia E. Dallman	
1. Introduction	190
2. Genetic Manipulation in the Zebrafish	192
3. Behaviors to Assess Sedation and Recovery From Anesthesia	195
4. Anesthesia in Zebrafish	199
5. Conclusions	204
References	205
11. The Mouse as a Model Organism for Assessing Anesthetic Sensitivity	211
Andrzej Z. Wasilczuk, Kaitlyn L. Maier, and Max B. Kelz	
1. Introduction	212
2. Anesthetic Dosing in Mice	212

3. Determination of Hypnotic Sensitivity in Mice	214
4. Assessing Sedation in Mice as a Measure of Anesthetic Sensitivity	219
5. Conclusions	225
References	225

Section III

Photolabeling

12. Identification of General Anesthetic Target Protein-Binding Sites by Photoaffinity Labeling and Mass Spectrometry 231

Kellie A. Woll, William P. Dailey, and Roderic G. Eckenhoff

1. Introduction	232
2. Photolabel Design and Synthesis	233
3. Physicochemical Characterization and Biological Validation	234
4. Photoaffinity Labeling	235
5. Mass Spectrometric Analysis	236
6. Additional Methodologies and Considerations	243
7. Conclusions	244
Acknowledgment	245
References	245

Section IV

Xenon

13. Xenon-Protein Interactions: Characterization by X-Ray Crystallography and Hyper-CEST NMR 249

Benjamin W. Roose, Serge D. Zemerov, and Ivan J. Dmochowski

1. Introduction	250
2. X-Ray Crystallography	254
3. Xe NMR	260
4. Summary and Conclusions	266
References	267
Further Reading	272

14. Methods for Defining the Neuroprotective Properties of Xenon 273

Richie Robel, Peter Caroccio, and Mervyn Maze

1. Introduction	274
2. Biological Action of a Chemically Nonreactive Monoatomic Gas	274

3. Methods to Explore the Action of Xenon on the <i>N</i> -Methyl-D-Aspartate Subtype of the Glutamate Receptor	274
4. Methods to Define Which Neuroprotective Indication to Pursue	275
5. Methods to Define the Neuroprotective Properties of Xenon in Postcardiac Arrest Syndrome	276
6. Methods to Define That Xenon Protects Against White Matter Brain Injury Following Cardiac Arrest (Hypotheca-Xe NCT00879892)	279
7. Methods to Define That Xenon Improves Survival With Good Functional Outcome Following Cardiac Arrest (NCT03176186)	279
8. Method for the Efficient Delivery of Xenon During the Phase 3 XePOHCAS Trial	282
9. Conclusion	286
References	286
15. Xenon Anesthesia and CT: Noninvasive Measures of Brain Anesthetic Concentration	289
Andrew McKinstry-Wu, Charles W. Carspecken, Alex Proekt, and Max B. Kelz	
1. Introduction	290
2. Relevant Properties and Uses of Xenon	291
3. Xenon Delivery	292
4. Synchronous Electroencephalographic (EEG), Behavioral, and Tissue Concentration Measures	293
5. General Method for Evaluating Anesthetic Pharmacokinetic-Pharmacodynamic Mismatch in Humans With EEG and Behavioral Testing	294
6. Data Analysis	295
7. Challenges and Potential Pitfalls	296
Acknowledgments	297
References	297

Section V

Electrophysiology

16. Native System and Cultured Cell Electrophysiology for Investigating Anesthetic Mechanisms	301
Paul Hoerbelt and Boris D. Heifets	
1. Introduction	302
2. Hippocampal Slice Electrophysiology	303
3. Cultured Cell Electrophysiology	323

4. Summary and Conclusion	335
References	335
Further Reading	338
17. Electrophysiological Analysis of Voltage-Gated Ion Channel Modulation by General Anesthetics	339
Elaine Yang, Lianteng Zhi, Qiansheng Liang, and Manuel Covarrubias	
1. Introduction	340
2. Investigating the Modulation of Nav Channels by Propofol	342
3. Investigating the Modulation of Kv Channels by Sevoflurane	354
4. Conclusion and Perspective	364
References	365
18. Combining Mutations and Electrophysiology to Map Anesthetic Sites on Ligand-Gated Ion Channels	369
Stuart A. Forman	
1. Introduction	370
2. Challenges for Identifying General Anesthetic Binding Sites	371
3. pLGIC Structural Models	371
4. Electrophysiological Approaches to Assessing pLGIC Function	373
5. Chimeric Subunits	375
6. Hydrophobic Point Mutations in nAChRs	376
7. Substituted Cysteine Accessibility Method	379
8. Disulfide Bond Formation Used to Probe Helix-Helix Interactions in GABA _A Receptors	380
9. Substituted Cysteine Modification and Protection	381
Acknowledgment	385
References	385
19. HCN and K_{2P} Channels in Anesthetic Mechanisms Research	391
Paul M. Riegelhaupt, Gareth R. Tibbs, and Peter A. Goldstein	
1. Introduction	392
2. HCN Channels	392
3. K _{2P} Channels	402
4. General Methodological Details and Considerations	408
References	410
