Preface

xv

1. Atlas of the Radical SAM Superfamily: Divergent Evolution of Function Using a "Plug and Play" Domain

1

Gemma L. Holliday, Eyal Akiva, Elaine C. Meng, Shoshana D. Brown, Sara Calhoun, Ursula Pieper, Andrej Sali, Squire J. Booker, and Patricia C. Babbitt

1. Introduction: Overview of the Radical SAM Superfamily

3

2. Results and Discussion: Structural Overview, A New Classification of the RSS, A Large-Scale View of Sequence-Structure-Function Relationships, Ancient Lineage of the RSS, Classification of the RSS Based on Sequence Similarity versus Chemical Similarity, Targeting Unknowns for Experimental Characterization

8

3. Methods

64

Acknowledgments

66

Author Contributions

66

Competing Financial Interests Statement

66

References

66

2. Purification and Characterization of the Choline Trimethylamine-Lyase (CutC)-Activating Protein CutD

73

Smaranda Bodea and Emily P. Balskus

1. Introduction

74

2. Overproduction and Purification of CutD

77

3. Characterization of the Iron-Sulfur Clusters in CutD

81

4. Activity of CutD Toward CutC

86

5. Conclusions

92

Acknowledgments

92

References

92

3. QueE: A Radical SAM Enzyme Involved in the Biosynthesis of 7-Deazapurine Containing Natural Products

95

Julia K. Lewis, Nathan A. Bruender, and Vahe Bandarian

1. Introduction

96

2. Expression and Purification of QueE

101

v

3. Expression and Purification of YkuN	105
4. Expression and Purification of FPR	107
5. Enzymatic Synthesis of CPH ₄ With GCH I and QueD From GTP	109
6. Typical Assay Conditions for QueE	114
7. LC-MS Analysis of Turnover by CDG synthase	114
8. Conclusions	115
Acknowledgments	115
References	115
4. TYW1: A Radical SAM Enzyme Involved in the Biosynthesis of Wybutosine Bases	119
Anthony P. Young and Vahe Bandarian	
1. Introduction	120
2. Expression and Purification of TYW1	125
3. Expression and Purification of TEV Protease	133
4. Expression and Purification of TRM5	135
5. Synthesis of Substrate for TYW1 via in vitro Transcription	138
6. Expression and Purification of T7 RNA Polymerase	139
7. Isolation of Substrate for TYW1 From <i>S. cerevisiae</i> Deletion Strain	141
8. Synthesis of S-adenosyl-L-methionine	143
9. Assay Conditions for TYW1	146
10. Conclusions	151
Acknowledgments	151
References	151
5. Mechanistic Studies on the Radical SAM Enzyme Tryptophan Lyase (NosL)	155
Dhananjay M. Bhandari, Dmytro Fedoseyenko, and Tadhg P. Begley	
1. Introduction	156
2. Cloning, Overexpression, and Purification of the Enzymes	159
3. Enzymatic Reactions of NosL	163
4. Summary and Conclusions	174
Funding Sources	176
References	176
6. Aminofutalosine Synthase (MqnE): A New Catalytic Motif in Radical SAM Enzymology	179
Sumedh Joshi, Dmytro Fedoseyenko, Nilkamal Mahanta, and Tadhg P. Begley	
1. Introduction	180
2. Cloning, Overexpression, and Purification of MqnE	182

3. Enzyme Activity Assay	186
4. Synthesis of $^2\text{H}_4$ -SAM	187
5. Radical Trapping Strategies for MqnE	191
6. Substrate Analog Synthesis	193
7. Conclusions	194
Acknowledgments	196
References	196
7. Iterative Methylations Resulting in the Biosynthesis of the t-Butyl Group Catalyzed by a B₁₂-Dependent Radical SAM Enzyme in Cystobactamid Biosynthesis	199
Yuanyou Wang, Bastien Schnell, Rolf Müller, and Tadhg P. Begley	
1. Introduction	200
2. Overexpression and Purification of CysS	201
3. Identification of the CysS Substrate	203
4. Identification of the Minimal CysS Substrate	207
5. Conclusions	212
Acknowledgments	214
References	214
8. Biochemical Approaches for Understanding Iron-Sulfur Cluster Regeneration in <i>Escherichia coli</i> Lipoyl Synthase During Catalysis	217
Erin L. McCarthy and Squire J. Booker	
1. Introduction	218
2. Overproduction and Isolation of <i>E. coli</i> LipA and <i>E. coli</i> NfuA	220
3. Initial Characterization of As-Isolated Protein	224
4. Methods for Isotopically Labeling Iron-Sulfur Clusters to Monitor Cluster Transfer	228
5. Strategies for Analyzing Protein Complex Formation	230
6. Monitoring Iron-sulfur Cluster Transfer Using Quantitative Analysis	233
7. Conclusions	237
Acknowledgments	237
References	237
Further Reading	239
9. Using Peptide Mimics to Study the Biosynthesis of the Side-Ring System of Nosiheptide	241
Bo Wang, Joseph W. LaMattina, Edward D. Badding, Lauren K. Gadsby, Tyler L. Grove, and Squire J. Booker	
1. Introduction	242
2. Overproduction and Purification of NosN	246

3. Preparation of Peptide Substrates	251
4. Quantitative Analysis of NosN Turnover	262
5. Conclusions	265
Acknowledgments	266
References	266
10. Mechanistic Studies of Radical SAM Enzymes: Pyruvate Formate-Lyase Activating Enzyme and Lysine 2,3-Aminomutase Case Studies	269
Amanda S. Byer, Elizabeth C. McDaniel, Stella Impano, William E. Broderick, and Joan B. Broderick	
1. Introduction	271
2. Preparation and Characterization of Radical SAM Enzymes	276
3. Synthesis of SAM and SAM Analogs	301
4. Conclusion	314
References	314
11. Determining Redox Potentials of the Iron-Sulfur Clusters of the AdoMet Radical Enzyme Superfamily	319
Stephanie J. Maiocco, Lindsey M. Walker, and Sean J. Elliott	
1. Introduction	320
2. Technical Details	330
3. Conclusion	336
Acknowledgment	336
References	336
12. Radical S-Adenosyl-L-Methionine (SAM) Enzyme Involved in the Maturation of the Nitrogenase Cluster	341
Lee Rettberg, Kazuki Tanifuji, Andrew Jasniewski, Markus Walter Ribbe, and Yilin Hu	
1. Introduction	343
2. Preparation of Functional, Recombinant NifB ^{Ma} Expressed in <i>E. coli</i>	348
3. SAM-related Biochemical Analysis of the Reconstituted NifB ^{Ma}	353
4. Summary and Conclusion	358
Acknowledgments	359
References	359
13. Purification, Characterization, and Biochemical Assays of Biotin Synthase From <i>Escherichia coli</i>	363
Julia D. Cramer and Joseph T. Jarrett	
1. Introduction	364
2. Expression and Purification of Recombinant BioB	367

3. Characterization and Manipulation of BioB Cofactor Composition	373
4. Determination of BioB Enzyme Activity	378
5. Conclusions and Future Directions	385
Acknowledgment	386
References	386
14. Methods for Expression, Purification, and Characterization of PqqE, a Radical SAM Enzyme in the PQQ Biosynthetic Pathway	389
Wen Zhu, Ana M. Martins, and Judith P. Klinman	
1. Introduction	390
2. Protein Expression, Purification, and Reconstitution	393
3. Protein Characterization	404
4. Summary and Conclusions	417
References	418
15. Methods for Studying the Radical SAM Enzymes in Diphthamide Biosynthesis	421
Min Dong, Yugang Zhang, and Hening Lin	
1. Introduction	422
2. Protein Expression, Purification, and Characterization	423
3. In Vitro Analysis of SAM Cleavage by Dph1-Dph2 With High-Performance Liquid Chromatography	432
4. In Vitro Reconstitution of the First Step of Diphthamide Biosynthesis	432
5. Conclusion	436
Acknowledgments	436
References	436
16. Guidelines for Determining the Structures of Radical SAM Enzyme-Catalyzed Modifications in the Biosynthesis of RiPP Natural Products	439
Leah B. Bushin and Mohammad R. Seyedsayamdost	
1. Introduction	440
2. Strategies for Characterizing PTMs in RaS RiPP Biosynthesis	442
3. Expression, Purification, and Reconstitution of RaS Enzymes	444
4. Solid-Phase Synthesis of Peptide Substrates	450
5. Enzymatic Activity Assays	452
6. Conclusions	458
Acknowledgments	458
References	459

17. Identification of the Radical SAM Enzymes Involved in the Biosynthesis of Methanopterin and Coenzyme F₄₂₀ in Methanogens 461

Kylie D. Allen and Robert H. White

1. Introduction 462
2. Overexpression of Methanogenic Proteins in *E. coli* 464
3. Identification of the Radical SAM Enzyme Involved in the Biosynthesis of Methanopterin 465
4. Identification of the Radical SAM Enzymes Involved in the Biosynthesis of F₀ 476
- References 480
- Further Reading 483

18. Lessons From the Studies of a C—C Bond Forming Radical SAM Enzyme in Molybdenum Cofactor Biosynthesis 485

Haoran Pang and Kenichi Yokoyama

1. Introduction 487
2. Preparation and Characterization of MoaA 491
3. Preparation and Characterization of MoaC 504
4. Isolation and Characterization of 3'- β -CH₂GTP 508
5. Summary and Conclusion 519
- References 520
