<i>Contributors</i>	ix
<i>Preface</i>	xi
1. Chromatin regulation and dynamics in stem cells	1
David C. Klein and Sarah J. Hainer	
1. Chromatin compaction, structure, and function	3
2. Chromatin dynamics regulate gene expression	8
3. ATP-dependent nucleosome remodeling complexes establish and maintain chromatin state	9
4. Histone modifications provide an additional layer of gene regulation	18
5. Histone chaperones and histone variants regulate chromatin structure	25
6. Histone H2A variants	29
7. Histone H3 variants	31
8. Histone chaperones	32
9. Chromatin structure is dynamic and highly regulated	36
10. Stem cell chromatin is dynamic and tuned to regulate cell fate	36
11. ES cells carefully regulate their chromatin via specialized transcription factors	37
12. Embryonic stem cell chromatin is poised for action	39
13. Histone modifications are specifically regulated in stem cells to maintain pluripotency and facilitate differentiation	39
14. Chromatin state is precisely regulated by nucleosome remodeling factors in ES cells	42
15. Long-range chromatin interactions are critical for regulation of pluripotency	51
16. ES cells regulate chromatin by common processes to preserve pluripotency	54
Acknowledgments	55
References	55
2. Role of lncRNAs in stem cell maintenance and differentiation	73
Meghali Aich and Debojyoti Chakraborty	
1. Introduction	74
2. Origin of noncoding RNAs	75
3. Core regulatory circuit in ESCs	76
4. lncRNAs: New determinants of ES cell fate	78

5. Long noncoding RNAs (lncRNAs) and their biological function	78
6. Discovery of lncRNAs: From sequences to function	80
7. Long noncoding RNAs and epigenetic regulation	80
8. Dissecting functional lncRNAs from transcriptional noise	81
9. lncRNAs in ESC pluripotency and somatic cell reprogramming	81
10. lncRNAs play a role in the differentiation of pluripotent stem cells	87
11. lncRNAs regulating the epigenome	88
12. The role of lncRNAs in dosage composition	89
13. lncRNAs implicated in imprinting developmentally associated genes	90
14. lncRNAs regulating signaling pathways in ESCs	91
15. lncRNAs regulating organ development	92
16. lncRNAs affecting neural development	93
17. lncRNAs regulating organogenesis	94
18. Cellular localization and maturation of lncRNAs	95
19. lncRNAs regulating the stability and functions of other RNAs	95
20. lncRNAs functioning in protein modification pathways	96
21. Mechanisms of lncRNA:DNA/RNA interaction	96
22. Allosteric regulation of proteins by lncRNAs	98
23. Single cell analysis of lncRNA functions	99
24. lncRNAs in disease progression	100
25. lncRNA knockouts often show lack of phenotype: The importance of context and redundancy	101
26. Conclusions	102
References	102
Further reading	111
3. Regulation of pluripotency and reprogramming by RNA binding proteins	113
Dan Li, Mohamed S. Kishta, and Jianlong Wang	
1. Pluripotency and reprogramming	114
2. RNA binding proteins	115
3. RNA helicases and DEAD-box helicase family	124
4. Conclusions	130
Acknowledgments	130
References	130
4. Generating primed pluripotent epiblast stem cells: A methodology chapter	139
Milan Samanta and Sundeep Kalantry	
1. Introduction	140
2. Materials	141

3. Methods	149
4. Discussion	166
5. Recipes	166
6. Notes	171
Acknowledgments	173
References	173
5. Differentiation of human pluripotent stem cells toward pharyngeal endoderm derivatives: Current status and potential	175
Margaret E. Magaletta, Richard Siller, and René Maehr	
1. Introduction	176
2. Overview of the pharyngeal apparatus formation within the gut tube	178
3. Pharyngeal endoderm development and lineage specification within the pharyngeal pouches	180
4. Pharynx derivative pluripotent stem cell differentiation protocols: Current status	182
5. Applications of hPSCs for studying pharyngeal endoderm development and disease	195
6. Future directions for hPSC differentiation approaches toward pharyngeal derivatives	196
7. Concluding remarks	199
Acknowledgments	199
References	199
6. Epigenetic metabolites license stem cell states	209
Logeshwaran Somasundaram, Shiri Levy, Abdiasis M. Hussein, Devon D. Ehnes, Julie Mathieu, and Hannele Ruohola-Baker	
1. Introduction	210
2. Stem cell energetics	210
3. Metabolism of quiescent stem cells	212
4. Metabolism of active stem cells	217
5. HIF, the master regulator of metabolism	222
6. Epigenetic signatures and epigenetic metabolites	224
7. Conclusion	229
Acknowledgments	230
References	230
Further reading	240
