Contributors	xv
Preface.....	xvii
CHAPTER 1	Discovery to Diagnosis 1
Krutika Deuchande and Dominic J. Harrington	
Essential Nutrients for Life	1
The Advent of Biochemistry	2
Germ Theory and the Great Diversion.....	3
Nutrition at the Beginning of the 20th Century	4
Biological Assays and the Path to Discovery.....	4
Fat- and Water-Soluble Vitamins	8
Standardization of the Novel Methods.....	13
Historic Methods 1912–80—A Journey Toward	
Clinical Utility.....	14
Biological Methods	14
Microbiological Methods	14
Physiochemical Methods	15
The Arrival of High Performance Liquid	
Chromatography.....	15
Sample Type.....	16
References.....	16
CHAPTER 2	Methods for Assessment of Vitamin A (Retinoids) and Carotenoids 21
Neal E. Craft and Harold C. Furr	
Introduction.....	22
Background	22
Structure and Function	22
Human Requirements and Recommendations	25
Chemical and Physical Properties.....	25
Handling and Storage.....	29
Biological Activities.....	30
Vision	30
Control of Gene Expression.....	31
Clinical Application of Measurement	32
Human Vitamin A Deficiency	32
Other Complications of Vitamin A Deficiency	32
Assessing Vitamin A Status.....	33

Analytical Methods	34
Sample Preparation	34
Techniques for Qualitative and Quantitative Analysis.....	36
Biological Assay	37
Carr-Price Assay.....	37
Fluorometry.....	37
Thin-Layer Chromatography	37
Gas Chromatography	37
High Performance Liquid Chromatography	38
Analyses for Retinol-Binding Protein.....	42
Anticipated Directions	43
References.....	43
Further Reading.....	47

CHAPTER 3 Methods for Assessment of Vitamin D 49

Graham Carter and David J. Card

Structure and Function	49
Nomenclature	51
Dietary Intake.....	51
Clinical Application of Measurement	51
Analytical Methods.....	52
Total 25-hydroxyvitamin D.....	52
Preanalytical.....	53
Analytical.....	55
Historical Methods.....	57
Functional Markers	63
Postanalytical	63
Best Practice.....	64
Choice of Method.....	64
Standardization and External Quality Assessment.....	65
Accuracy and Precision of 25-OHD Assays	67
Summary	70
Appendix	71
Commonly Used Commercial Automated Assays	
for Total 25-OHD.....	71
Abbott.....	71
DiaSorin	71
Immunodiagnostic Systems (IDS)	72
Roche	72
Siemens Healthineers.....	72
References.....	73
Further Reading.....	77

CHAPTER 4	Methods for Assessment of Vitamin E	79
	Scott W. Leonard and Maret G. Traber	
	Introduction	80
	Structure and Function	80
	Structure	80
	Function	81
	Clinical Application of Measurements	82
	Measuring Vitamin E Status in Humans	83
	Sample Types and Sample Stability	83
	Precanalytical Sample Selection	84
	Blood	84
	Urine	85
	Tissue	85
	Sample Preparation and Extraction	85
	Blood and Tissue Vitamin E	86
	Vitamin E Catabolites	87
	Measures to be Used as Outcome Denominators	89
	Analytical (Vitamin E & Carboxyethyl-6-Hydroxychromanol)	90
	Chromatographic Instruments	90
	Columns and Mobile Phases	91
	Detectors	92
	Interpretation of Results	95
	Antagonists and Interfering Compounds	96
	Standardization	96
	Conclusions	97
	References	98
CHAPTER 5	Methods for Assessment of Vitamin K	107
	Renata M. Górska	
	Structure and Function	108
	Chemical Properties	108
	Nutritional Sources	109
	Vitamin K Absorption and Metabolism	110
	Intestinal Absorption and Entry Into Circulation	110
	Uptake by Liver	112
	Uptake by Bone	112
	Excretion	112
	Clinical Application of Measurement	112
	Classical Role of Vitamin K in Hemostasis	112
	Antagonists of Vitamin K Action	114

Patient Groups at Increased Risk of Vitamin K	
Deficiency	114
Genotypes Influencing Vitamin K Status	115
Analytical Methods	115
Historical Methods	115
Laboratory Assessment of Vitamin K	
Status—Clinical Aspects	116
Laboratory Assessment of K Vitamins	
Status—Technical Aspects	116
Preanalytical Sample Preparation	118
Sample Collection	118
Internal Standardization	118
Chromatography	121
Detection	126
Example Protocol for Sample Preparation	128
Standardization	129
Reference Range for Phylloquinone	130
External Quality Assurance Scheme	130
Functional Markers for Assessment of Vitamin K Status	130
Osteocalcin	136
Matrix Gla Protein	137
Best Practice	138
Conclusions	138
Summary of the Laboratory Test for Vitamin K	
Investigation	140
Acknowledgments	140
References	140

CHAPTER 6

Methods for Assessment of Thiamine (Vitamin B₁)	149
Martin A Crook	
Introduction	150
Structure and Function	150
Physiology	150
Sources	151
Functions	151
Clinical Application of Measurement	151
Deficiency Treatment	155
Analytical Methods	155
Historical Methods	155
Direct Assay Measurement of Thiamine Compounds	156

Preanalytical.....	156
Analytical.....	156
Postanalytical.....	157
Standardization.....	157
External Quality Assurance.....	157
Summary.....	158
References.....	158
Further Reading.....	164

CHAPTER 7 Methods for Assessment of Vitamin B₂..... 165

Roy A. Sherwood

Structure and Function.....	165
Structure.....	165
Function.....	166
Dietary Intake.....	167
Clinical Application of Measurement.....	167
Riboflavin Deficiency in Humans.....	167
Analytical Methods.....	168
Assessment of Riboflavin Status in Humans.....	168
Microbiological Assays.....	168
Fluorometric Assays.....	168
Functional Assays.....	168
Enzymatic Assay.....	169
Capillary Electrophoretic Methods.....	169
Chromatographic Methods.....	169
Standardization.....	170
External Quality Assurance.....	170
References.....	170

CHAPTER 8 Methods for Assessment of Pantothenic Acid (Vitamin B₅)..... 173

Rick Huisjes and David J. Card

Structure and Function.....	173
Dietary Intake.....	175
Absorption, Transport, Kinetics, and Storage.....	175
Clinical Application of Measurement.....	175
Analytical Methods.....	176
Historical Methods.....	176
Best Practice.....	176
High Performance Liquid Chromatography.....	177
Enzyme-Linked Immunosorbent Assay.....	177

	Standardization.....	178
	References.....	178
	Further Reading.....	179
CHAPTER 9	Methods for Assessment of Vitamin B₆	181
	Roy A. Sherwood	
	Structure and Function.....	181
	Dietary Intake.....	182
	Clinical Applications of Measurement.....	182
	Indices of Vitamin B ₆ Status.....	183
	Analytical Methods.....	184
	Pyridoxal-5-Phosphate.....	184
	Pyridoxal.....	184
	4-Pyridoxic Acid.....	184
	Indirect Functional Indices of Vitamin B ₆ Status.....	185
	Transaminases.....	185
	Kynurenines.....	185
	Plasma Amino Acids.....	186
	Standardization.....	187
	Standard Reference Materials.....	187
	Conclusions.....	187
	References.....	187
	Further Reading.....	191
CHAPTER 10	Methods for Assessment of Biotin (Vitamin B₇)	193
	Rachel S. Carling and Charles Turner	
	Introduction.....	194
	Structure and Function.....	194
	Biotin Requirements and Recommended Daily Allowance.....	195
	Functions of Biotin.....	195
	Pyruvate Carboxylase.....	196
	Propionyl CoA Carboxylase.....	196
	Multiple CoA Carboxylase.....	196
	Acetyl CoA Carboxylase I and II.....	196
	Biotin Homeostasis.....	197
	Biotin Metabolism.....	198
	Clinical Application of Measurement.....	200
	Biotin Insufficiency.....	200
	Biotin Toxicity.....	202
	Biotin Supplementation.....	202

Analytical Methods	203
Direct Methods for Measurement of Biotin in Biological Fluids	203
Indirect Methods: Functional Markers for the Assessment of Biotin Status	205
Standardization	209
Biotin	209
Indirect Markers	210
Best Practice	210
Conclusion	211
References	211
CHAPTER 11 Methods for Assessment of Folate (Vitamin B₉)	219
Agata Sobczyńska-Malefora	
Historical Overview	220
Structure and Function	220
Absorption, Cellular Uptake, and Catabolism	223
Distribution and Tissue Concentration	223
Sources and Stability	224
Requirements and Recommendations in Humans	225
Causes and Clinical Signs of Deficiency	226
Homocysteine	226
Clinical Application of Measurement	229
Serum/Plasma Folate	231
RCF	231
Individual Folate Forms in Serum/Plasma and Red Cells	232
5-MTHF in Cerebrospinal Fluid (CSF)	232
Total Plasma Homocysteine	233
Analytical Methods	234
Brief Historical Overview of Folate Method Development	234
Microbiological Folate Assays	235
FBP Assays	237
High Performance Liquid Chromatography and Gas Chromatography Folate Assays	239
Liquid Chromatography-Mass Spectrometry Folate Assays	241
Analytical Methods for Homocysteine Assessment	242

Sample Types and Sample Stability	248
Total Plasma Serum and Plasma Folate	248
Total Red Cell/Whole-Blood Folate	248
Cerebrospinal Fluid 5-Methyltetrahydrofolate Analysis.....	249
Total Plasma/Serum Homocysteine	249
Reference Ranges.....	250
Serum and RCF	250
MultiMarker Status Evaluation	250
Total Plasma Homocysteine	253
External Quality Assurance (EQA), Standardization, and Reference Materials.....	253
Acknowledgments.....	254
References	255

CHAPTER 12 Methods for Assessment of Vitamin B₁₂ 265

Dominic J. Harrington	
Structure and Function	266
Dietary Intake.....	267
Absorption.....	269
Clinical Application of Measurement	270
Megaloblastic Anemia.....	271
Response to Treatment.....	272
Analytical Methods	273
Historical Methods	273
Microbiological Assays.....	273
Radioisotope-Based Dilution Assays for Serum Vitamin B ₁₂	274
Contemporary Methods.....	274
Laboratory Markers of Vitamin B ₁₂ Status	274
Preanalytical Sample Preparation	275
Electrochemiluminescence Immunoassay	276
Chemiluminescence	277
Enzyme-Linked Fluorescence.....	277
Standards, Accuracy, and Precision of Cobalamin Assays	277
Internal Adjustment Calibration.....	279
Reference Range	279
Holotranscobalamin	281
Calibration.....	282
Comparison of Active B ₁₂ Assays From Abbott and Siemens	283

Contributors

Comparison of Active B ₁₂ Assays From Abbott and Roche.....	283
Limitations of Active B ₁₂ Assays.....	283
Holotranscobalamin External Quality Assurance.....	283
Reference Range.....	283
Methylmalonic Acid.....	284
Methylmalonic Acid Measurement.....	284
Total Homocysteine.....	286
Homocysteine Measurement.....	286
Identifying the Etiology of Vitamin B ₁₂ Deficiency.....	286
Best Practice.....	288
First-Line Assessment of Vitamin B ₁₂ Status.....	288
Utility of Serum B ₁₂ Assays.....	288
Utility of Holotranscobalamin Assays.....	290
Comparison of Holotranscobalamin and Serum B ₁₂ Assays.....	290
Second-Line Testing.....	290
Utility of Homocysteine Assays.....	291
Utility of Methylmalonic Acid.....	291
Multiassay Approaches to the Laboratory Diagnosis of Vitamin B ₁₂ Status.....	291
Recommended Approaches for the Laboratory Assessment of Vitamin B ₁₂ Status.....	292
Recommended "Three-Variable" Analysis: Serum Vitamin B ₁₂ , Holotranscobalamin, and Methylmalonic Acid.....	292
Recommended "Two-Variable" Analysis: Holotranscobalamin and Methylmalonic Acid.....	292
Example Laboratory Assessment Algorithm.....	292
Acknowledgments.....	293
References.....	294

CHAPTER 13 Methods for Assessment of Vitamin C..... 301

David J. Card

Structure and Function.....	301
Dietary Intake.....	303
Absorption, Transport, Kinetics, and Storage.....	303
Clinical Application of Measurement.....	305
Analytical Methods.....	307
Historical Methods.....	307
Functional Markers.....	308

Matrix Variations.....	309
Sample Stability.....	310
Best Practice.....	311
Standardization.....	313
Acknowledgments.....	314
References.....	314
Index	317
