

CONTENTS

<i>Preface</i>	<i>xiii</i>
<i>Acknowledgments</i>	<i>xv</i>
1. Why Study Continental Aquatic Systems?	1
Human Use of Water: Pressures on a Key Resource	5
What is the Value of Water?	9
Advanced: Methods for Assigning Values to Ecosystem Services	14
The Anthropocene: Climate Change and Water Resources	15
Politics, Citizens, Science, and Water	17
Summary	19
Questions for Thought	20
2. Properties of Water	21
Chemical and Physical Properties	22
Advanced: The Nature of Water	28
Relationships Among Water Viscosity, Inertia, and Physical Parameters	29
Movement of Water	34
Advanced: Equations Describing Properties of Moving Water	40
Forces That Move Water	45
Summary	47
Questions for Thought	48
3. Movement of Light, Heat, and Chemicals in Water	49
Diffusion of Chemicals in Water	50
Movement of Gases Between Atmosphere and Water	56
Light in Water	57
Heat Balance in Water	70
Summary	71
Questions for Thought	72
4. The Hydrologic Cycle and Physiography of Groundwater Habitats	73
Habitats and the Hydrologic Cycle	74
Advanced: Prediction of Amount and Variability of Runoff with Global Climate Change	77
Movement of Water Through Soil and Aquifers	79
Groundwater Habitats	85

Interaction of Groundwaters with Surface Waters	89
Summary	92
Questions for Thought	93
5. Hydrology and Physiography of Wetland Habitats	95
Definition of Wetlands	97
Wetland Conservation and Mitigation	100
Wetland Types	101
Wetland Hydrology	111
Restoration Ecology and Wetland Restoration	115
Wetlands and Global Change	117
Wetlands as Key Habitat for Wildlife	119
Summary	119
Questions for Thought	120
6. Physiography of Flowing Water	121
Characterization of Streams	122
Streamflow and Geology	130
Human Influences on Physical Aspects of Rivers	138
River and Stream Restoration	141
Transport of Materials by Rivers and Streams	144
Advanced: Characterizing the Movement of Dissolved Materials in Rivers and Streams	150
Summary	152
Questions for Thought	153
7. Lakes and Reservoirs: Physiography	155
Formation: Geological Processes	156
Lake Habitats and Morphometry	167
Unique Properties of Reservoirs	172
Geomorphological Evolution of Lakes and Reservoirs	173
Stratification	174
Advanced: Heat Budgets of Lakes	180
Water Movement and Currents in Lakes	181
Summary	185
Questions for Thought	186
8. Types of Aquatic Organisms	189
The Species Concept	190
Chemical Taxonomic Methods	193
Molecular Approaches for Assessing Taxonomy and Diversity in Natural Environments	195
Molecular Methods for General Aquatic Ecology	198

Major Taxonomic Groups	199
Classification of Organisms by Function, Habitats, and Interactions	202
Organisms Found in Freshwaters	206
Summary	208
Questions for Thought	209
9. Microbes and Plants	211
Viruses	212
Archaea	216
Bacteria	218
Protoctista	225
Fungi	238
Plantae	241
Summary	248
Questions for Thought	249
10. Multicellular Animals	251
Invertebrates	252
Phylum Chordata, Subphylum Vertebrata	287
Summary	292
Questions for Thought	293
11. Evolution of Organisms and Biodiversity of Freshwaters	295
Measures of Diversity	297
Temporal and Spatial Factors Influencing Evolution of Freshwater Organisms	300
Short-Term Factors Influencing Local Distribution of Species	307
Genetics and Populations of Species	312
Global Change and Shifts in Biodiversity	315
Nonnative Species	317
Extinction	323
What is the Value of Freshwater Species Diversity?	330
Summary	332
Questions for Thought	333
12. Aquatic Chemistry and Factors Controlling Nutrient Cycling: Redox and O₂	335
Chemicals in Freshwaters	336
Redox Potential, Potential Energy, and Chemical Transformations	340
Oxygen: Forms and Transformations	347
Photosynthesis	349
Respiration	358
Metabolic Balance of Photosynthesis and Respiration, and Temperature Effects	358

Controls of Distribution of Dissolved Oxygen in the Environment	360
Summary	367
Questions for Thought	368
13. Carbon	371
Forms of Carbon	372
Transformations of Carbon	377
Global Emission of Methane and Carbon Dioxide Related to Inland Aquatic Habitats and Climate Change	386
A Conceptual Introduction to Nutrient Cycling	389
The Carbon Cycle	391
Summary	393
Questions for Thought	393
14. Nitrogen, Sulfur, Phosphorus, and Other Nutrients	395
Nitrogen	396
Sulfur	405
Phosphorus	411
Silicon and Iron	414
Cycling of Other Elements	419
Gradients of Redox and Nutrient Cycles and Interactions Among the Cycles	420
Summary	422
Questions for Thought	423
15. Adaptations to Extreme and Unusual Habitats	425
Adaptations to Extremes	426
Saline Lakes	430
Hot Springs	433
Cold Habitats	436
Temporary Waters and Small Pools	440
Ultraoligotrophic Habitats	446
Hypertrophic Habitats	446
Deep Subsurface Habitats	447
The Water Surface Layer	449
Summary	451
Questions for Thought	451
16. Responses to Stress, Toxic Chemicals, and Other Pollutants in Aquatic Ecosystems	453
Basic Toxicology	456
Bioassessment	462

Organic Pollutants	464
Acid Precipitation	476
Metals and Radioactive Pollutants	485
Nanomaterials	491
Salt Pollution	493
Suspended Solids	495
Thermal Pollution	496
Anthropogenic Increases in UV Radiation	499
Urbanization	499
Summary	500
Questions for Thought	501
17. Nutrient Use and Remineralization	503
Use of Nutrients	504
Nutrient Limitation and Relative Availability	511
Resource Ratios and Stoichiometry of Primary Producers	521
Nutrient Remineralization	522
Stoichiometry of Heterotrophs, Their Food, and Nutrient Remineralization	528
Summary	533
Questions for Thought	534
18. Trophic State and Eutrophication	537
Definition of Trophic State	539
Advanced: Determining Reference Nutrient Conditions in Freshwater Environments	543
Why Does Alteration of Trophic State by Nutrient Pollution Matter in Lakes?	544
Natural and Cultural Processes of Eutrophication	547
Relationships Among Nutrients, Water Clarity, and Phytoplankton: Managing Eutrophication in Lakes	553
Advanced: Empirical Relationships Used to Predict Control of Eutrophication	556
Mitigating Lake Eutrophication	559
Managing Eutrophication in Streams and Rivers	567
Case Studies of Eutrophication in Lakes and Lotic Systems	569
Managing Eutrophication in Wetlands	577
Summary	580
Questions for Thought	581
19. Behavior and Interactions Among Microorganisms and Invertebrates	583
Behavior of Microorganisms	585
Interaction Types in Communities	590
Predation and Parasitism, Including the Microbial Loop	590
Competition	609

Mutualism: Facilitation and Syntrophy	614
Chemical Mediation of Microbial Interactions	617
Summary	617
Questions for Thought	618
20. Predation and Food Webs	621
Herbivory	622
Detritivory	625
Omnivory	627
Adaptation to Predation Pressure	631
Adaptations of Predators	635
Nonlethal Effects of Predation	639
Trophic Levels, Food Webs, and Food Chains	640
The Trophic Cascade	641
Summary	650
Questions for Thought	650
21. Nonpredatory Interspecific Interactions Among Plants and Animals in Freshwater Communities	653
Competition	654
Mutualism and Facilitation	663
Other Species Interactions	668
Summary	669
Questions for Thought	669
22. Complex Community Interactions	671
Disturbance	672
Succession	677
Indirect Interactions	683
Strong Interactors	686
Theoretical Community Ecology and Aquatic Food Webs	688
Thresholds and Alternative Stable States	689
Invasion and Extinction Revisited	692
Summary	696
Questions for Thought	696
23. Fish Ecology, Fisheries, and Aquaculture	699
Biogeographical and Environmental Determinants of Fish Assemblage Diversity	700
Physiological Aspects Influencing Growth, Survival, and Reproduction	704
Population Dynamics of Fishes	710
Regulating Exploitation of Fish Stocks	715

Stocking for Fisheries	717
Aquaculture	719
Summary	721
Questions for Thought	722
24. Freshwater Ecosystems	723
General Approaches to Ecosystems	724
Secondary Production	726
Energy Fluxes and Nutrient Cycling	730
Nutrient Budgets	731
Biodiversity and Ecosystem Function	733
Groundwater Ecosystems	737
Streams and Rivers	739
Lakes and Reservoirs	748
Advanced: Reservoirs as Unique Ecosystems	752
Wetlands	753
Whole-Ecosystem Experiments	757
Comparison of Freshwater Ecosystems	760
Summary	762
Questions for Thought	763
25. Scaling, Landscapes, Macroecology, and Macrosystems in Freshwaters	765
Scaling	766
Landscape Ecology	768
Macroecology	777
Macrosystems	780
Summary	788
Questions for Thought	789
26. Conclusions	791
<i>Appendix: Experimental Design in Aquatic Ecology</i>	795
Glossary	805
References	833
Taxonomic Index	949
Geographic Index	961
Subject Index	965
