

Preface to Third Edition Acknowledgments

xiii
xv

UNIT I BASIC CHEMICAL AND BIOLOGICAL PRINCIPLES 1

CHAPTER 1 *Cells and Organisms* 2

1. What Is Life?	3
2. Living Creatures Are Made of Cells	4
3. Eubacteria and Archaea Are Genetically Distinct	9
4. Eukaryotic Cells Are Subdivided Into Compartments	10
5. The Diversity of Eukaryotes	13
6. Haploidy, Diploidy, and the Eukaryote Cell Cycle	13
7. Organisms Are Classified	15
8. Some Widely Studied Organisms Serve as Models	16
9. Basic Characteristics of a Model Organism	28
10. Purifying DNA From Model Organisms	28
11. Viruses Are Not Living Cells	30
12. Bacterial Viruses Infect Bacteria	31
13. Human Viral Diseases Are Common	33
14. A Variety of Subcellular Genetic Entities Exist	33
Review Questions	36
Further Reading	37

CHAPTER 2 *Basic Genetics* 38

1. Gregor Mendel, the Father of Classical Genetics	38
2. Genes Determine Each Step in Biochemical Pathways	40
3. Mutants Result From Alterations in Genes	41
4. Phenotypes and Genotypes	42
5. Chromosomes Are Long, Thin Molecules That Carry Genes	43
6. Dominant and Recessive Alleles	46
7. Genes From Both Parents Are Mixed by Sexual Reproduction	49
8. Neighboring Genes Are Linked During Inheritance Unless the DNA Recombines	54
9. Identifying Genes That Cause Human Diseases	58
Review Questions	61
Further Reading	62

CHAPTER 3 *Nucleic Acids and Proteins* 63

1. History of DNA as the Genetic Material	63
2. Nucleic Acid Molecules Carry Genetic Information	64
3. Chemical Structure of Nucleic Acids	64
4. Double-Stranded DNA Forms a Double Helix	68
5. Constituents of Chromosomes	76
6. The Central Dogma Outlines the Flow of Genetic Information	79
7. Ribosomes Read the Genetic Code	81
8. Various Classes of RNA Have Different Functions	84
9. Proteins Carry Out Many Cell Functions	86
Review Questions	93
Further Reading	94

CHAPTER 4 *Genes, Genomes, and DNA* 95

1. Overview of Genome Organization	95
2. The Eukaryotic Genome	101
3. Palindromes, Inverted Repeats, and Stem and Loop Structures	108
4. Purine Rich DNA Structures	110
5. Supercoiling Is Necessary to Package Bacterial DNA	112
6. Separation of DNA Fragments by Electrophoresis	117
7. Alternative Helical Structures of DNA Occur	120
8. Packaging DNA in Eukaryotic Nuclei	123
Review Questions	129
Further Reading	130

CHAPTER 5 *Manipulation of Nucleic Acids* 132

1. Cutting and Rejoining DNA	132
2. Chemical Synthesis of DNA	141
3. Measuring DNA and RNA Concentration With Ultraviolet Light	152
4. Radioactive Labeling of Nucleic Acids	151
5. Fluorescence in the Detection of DNA and RNA	154
6. The Electron Microscope	158
7. Hybridization of DNA and RNA	159
Review Questions	165
Further Reading	166

UNIT 2 THE GENOME**167****CHAPTER 6 Polymerase Chain Reaction 168**

1. Fundamentals of PCR	169
2. Preventing Mispriming	179
3. Adding Sequences to PCR Amplicons	179
4. Degenerate PCR Primers	180
5. Inverse PCR	182
6. Reverse Transcriptase PCR	183
7. PCR in Genetic Engineering	185
8. Directed Mutagenesis	186
9. Engineering Deletions and Insertions by PCR	187
10. Real-Time PCR or Quantitative PCR (qPCR)	189
11. Molecular Beacons	192
12. Use of PCR in Forensics	193
13. PCR in Medical Diagnosis	194
14. Environmental DNA (eDNA) Analysis by PCR	194
15. Rescuing DNA from Extinct Life Forms by PCR	195
Review Questions	197
Further Reading	198

CHAPTER 7 Cloning Genes for Synthetic Biology 199

1. Properties of Cloning Vectors	200
2. Adding Inserts to a Vector	204
3. Adding Vectors to Host Organisms With Transformation	213
4. Detecting Inserts in Vectors	214
5. Types of Cloning Vectors	220
6. Synthetic Biology Standardizes Vector Construction	231
7. A DNA Library Is a Collection of Genes	231
Review Questions	238
Further Reading	239

CHAPTER 8 DNA Sequencing 240

1. DNA Sequencing—Overview of Chain Termination Sequencing	241
2. Automated Sequencing	246
3. Next-Generation Sequencing	247
4. Targeted Sequencing	262
5. Third-Generation Sequencing	264
6. DNA Microarrays for Sequence Analysis	266
Review Questions	268
Further Reading	269

CHAPTER 9 Genomics and Systems Biology 270

1. Large Scale Mapping With Sequence Tags	271
2. Assembling Genomes by Shotgun Sequencing	272
3. Assembling the Human Genome	273
4. Survey of the Human Genome	276
5. Personal Genomics and Pharmacogenomics	282
6. Bioinformatics and Computer Analysis	284
7. Metagenomics and Community Sampling	287
Review Questions	292
Further Reading	293

UNIT 3 THE CENTRAL DOGMA OF MOLECULAR BIOLOGY 295**CHAPTER 10 Cell Division and DNA Replication 296**

1. Cell Division and Reproduction Are Not Always Identical	297
2. DNA Replication Occurs at the Replication Fork	297
3. Properties of DNA Polymerase	301
4. Nucleotides Are the Precursors for DNA Synthesis	302
5. DNA Polymerase Elongates DNA Strands	304
6. The Complete Replication Fork Is Complex	308
7. Discontinuous Synthesis of the Lagging Strand	306
8. Chromosome Replication Initiates at <i>oriC</i>	310
9. Chromosome Replication Terminates at <i>terC</i>	314
10. Cell Division in Bacteria Occurs After Chromosome Replication	315
11. The Concept of the Replicon	318
12. Replicating Linear DNA in Eukaryotes	319
13. Cell Division in Higher Organisms	326
Review Questions	330
Further Reading	330

CHAPTER 11 Transcription of Genes 332

1. Genes Are Expressed by Making RNA	333
2. How Is the Beginning of a Gene Recognized?	335
3. Manufacturing the Message	337
4. RNA Polymerase Knows Where to Stop	340
5. How Does the Cell Know Which Genes to Turn On?	342
6. Transcription in Eukaryotes Is More Complex	347
7. Transcription in Archaea	357
Review Questions	360
Further Reading	361

CHAPTER 12 Processing of RNA	362	CHAPTER 14 Protein Structure and Function	445
1. RNA Is Processed in Several Ways	362	1. The Structure of Proteins Reflects Four Levels of Organization	445
2. Coding and Noncoding RNA	364	2. Determining Protein Structures	456
3. Processing of Ribosomal and Transfer RNA	364	3. Nucleoproteins, Lipoproteins, and Glycoproteins are Conjugated Proteins	458
4. Eukaryotic Messenger RNA Contains a Cap and a Tail	366	4. Proteins Serve Numerous Cellular Functions	460
5. Introns Are Removed From RNA by Splicing	370	5. Protein (Nano)-Machines	461
6. Alternative Splicing Produces Multiple Forms of RNA	374	6. Enzymes Catalyze Metabolic Reactions	465
7. Intrins and Protein Splicing	378	7. Binding of Proteins to DNA Occurs in Several Different Ways	476
8. Base Modification of tRNA Requires Guide RNA	381	8. Denaturation of Proteins	480
9. RNA Editing Alters the Base Sequence	383	Review Questions	482
10. Transport of RNA Out of the Nucleus	387	Further Reading	483
11. Degradation of mRNA	389		
Review Questions	395		
Further Reading	395		
CHAPTER 13 Protein Synthesis	397	CHAPTER 15 Proteomics: The Global Analysis of Proteins	484
1. Overview of Protein Synthesis	398	1. The Proteome	485
2. Proteins Are Chains of Amino Acids	399	2. Antibodies Are Essential Proteomics Tools	489
3. Decoding the Genetic Information	403	3. Western Blotting of Proteins	490
4. The Ribosome: The Cell's Decoding Machine	409	4. Isolating Proteins With Chromatography	491
5. Three Possible Reading Frames Exist	412	5. Mass Spectrometry for Protein Identification	493
6. The tRNA Occupies Three Sites During Elongation of the Polypeptide	418	6. Protein-Tagging Systems	495
7. Bacterial mRNA Can Code for Several Proteins	421	7. Selection by Phage Display	499
8. Some Ribosomes Become Stalled and Are Rescued	424	8. Protein Interactions	502
9. Differences Between Eukaryotic and Prokaryotic Protein Synthesis	425	9. Protein Arrays	514
10. Protein Synthesis Is Halting When Resources Are Scarce	429	10. Metabonomics	516
11. A Signal Sequence Marks a Protein for Export From the Cell	430	Review Questions	519
12. Protein Synthesis Occurs in Mitochondria and Chloroplasts	432	Further Reading	520
13. Mistranslation Usually Results in Mistakes in Protein Synthesis	435		
14. Many Antibiotics Work by Inhibiting Protein Synthesis	435	UNIT 4 REGULATING GENE EXPRESSION	521
15. Post-Translational Modifications of Proteins	436	CHAPTER 16 Regulation of Transcription in Prokaryotes	522
16. Selenocysteine and Pyrrolysine: Rare Amino Acids	436	1. Gene Regulation Ensures a Physiological Response	522
17. Degradation of Proteins	439	2. Regulation at the Level of Transcription Involves Several Steps	524
Review Questions	442	3. Alternative Sigma Factors Recognize Different Sets of Genes	525
Further Reading	443	4. Activators, Repressors and Operons	532
		5. Two-Component Regulatory Systems	542

6. Specific Versus Global Control	554	Review Questions	619
7. Accessory Factors and Nucleoid-Binding Proteins	552	Further Reading	620
8. Antitermination As a Control Mechanism	555		
Review Questions	558		
Further Reading	559		
CHAPTER 17 Regulation of Transcription in Eukaryotes	560	CHAPTER 20 Genome Defense	622
1. Transcriptional Regulation in Eukaryotes Is More Complex Than in Prokaryotes	560	1. Introduction to Genome Defense	622
2. Specific Transcription Factors Regulate Protein-Encoding Genes	561	2. The Multifaceted Approach to Defending the Genome	623
3. Negative Regulation of Transcription in Eukaryotes	566	3. Principles of RNA Interference (RNAi)	624
4. Heterochromatin Blocks Access to DNA in Eukaryotes	568	4. Delivery of siRNA and Applications of RNAi	629
5. Methylation of Eukaryotic DNA Controls Gene Expression	575	5. CRISPR: Antiviral Defense in Bacteria	632
Review Questions	579	6. CRISPR Systems Are Functionally and Structurally Classified	636
Further Reading	580	7. Applications Using CRISPR	639
		8. Other Genome Editing Tools	648
		Review Questions	653
		Further Reading	655
CHAPTER 18 Regulation of Protein Synthesis	581	CHAPTER 21 Analysis of Gene Expression	654
1. Regulation at the Level of mRNA	582	1. Monitoring Gene Expression	654
2. Regulation by Cleavage of mRNA	582	2. Reporter Genes for Monitoring Gene Expression	655
3. Regulation by siRNA-Binding Proteins	585	3. Deletion Analysis of the Upstream Region	659
4. Regulation by Antisense RNA	589	4. DNA-Protein Complexes Can Be Isolated by Chromatin Immunoprecipitation	666
5. Regulation by mRNA Upstream and Downstream Regions	592	5. Location of the Start of Transcription by Primer Extension	670
6. Premature Termination Causes Attenuation of Transcription	595	6. Transcriptome Analysis	671
7. Riboswitches—RNA Acting Directly As a Control Mechanism	597	7. DNA Microarrays for Gene Expression	677
8. Regulation of mRNA by Methylation	600	8. TaqMan Quantitative PCR to Assay Gene Expression	682
Review Questions	602	9. Serial Analysis of Gene Expression (SAGE)	686
Further Reading	603	Review Questions	689
		Further Reading	690
CHAPTER 19 Noncoding RNA	604	CHAPTER 22 Epigenetics and Epigenomics	691
1. Survey of RNA Classes	604	1. Defining Epigenetics and Epigenomics	691
2. Ribozymes and the Enzyme Activity of RNA	608	2. Epigenetics of Bacteria	692
3. RNA in Prokaryotes Versus Eukaryotes	609	3. Methylation of DNA	692
4. Short Regulatory RNA	611	4. Protein and RNA-Based Epigenetic Regulation	694
5. tRNA Fragments	614	5. Structural Inheritance	697
6. Long Noncoding RNA	615	6. Epigenetics of Humans and Other Mammals	699
7. Circular RNA	617	7. Epigenetics of Insects	703
		8. Epigenetics of Plants	704
		9. Epigenetics of Protists	705
		Review Questions	709
		Further Reading	710

**UNIT 5 SUBCELLULAR GENETIC
ELEMENTS**
711
CHAPTER 23 Plasmids
712

1. Plasmids As Replicons 713
2. General Properties of Plasmids 715
3. Plasmid DNA Replicates by Two Alternative Methods 718
4. Many Plasmids Help Their Host Cells 725
5. Plasmids May Provide Aggressive Characters 733
6. Ti Plasmids Are Transferred From Bacteria to Plants 739
7. The 2 Micron Plasmid of Yeast 741
8. Certain DNA Elements May Behave As Viruses or Plasmids 744
- Review Questions 746
- Further Reading 747

**CHAPTER 24 Viruses, Viroids, and
Prions**
749

1. Viruses Are Infectious Packages of Genetic Information 750
2. The Classification of Viruses 757
3. The Great Diversity of Viruses 760
4. Giant Viruses 765
5. Viruses With RNA Genomes Have Very Few Genes 767
6. Retroviruses Use Both RNA and DNA 774
7. Subviral Infectious Agents 779
8. Prions Are Infectious Proteins 784
- Review Questions 790
- Further Reading 792

CHAPTER 25 Mobile DNA
793

1. Subcellular Genetic Elements As Gene Creators 793
2. Most Mobile DNA Consists of Transposable Elements 794
3. Retroelements Make an RNA Copy 811
4. The Multitude of Transposable Elements 817
5. Hybrids Combine Properties of Multiple Genetic Elements 818
6. Mobile DNA That Is Not Transposable 821
7. Junk DNA and Selfish DNA 824
- Review Questions 828
- Further Reading 829

**UNIT 6 CHANGING THE DNA
BLUEPRINT**
831
CHAPTER 26 Mutations and Repair
832

1. Mutations Alter the DNA Sequence 832
2. The Major Types of Mutation 833
3. Chemical Mutagens Damage DNA 845
4. Overview of DNA Repair 853
5. Reversions Are Genetic Alterations That Change the Phenotype Back to Wild Type 872
6. Site-Directed Mutagenesis 877
- Review Questions 878
- Further Reading 879

CHAPTER 27 Recombination
880

1. Overview of Recombination 880
2. Molecular Basis of Homologous Recombination 882
3. Site Specific Recombination 886
4. Recombination in Higher Organisms 889
5. Gene Conversion 891
- Review Questions 894
- Further Reading 894

CHAPTER 28 Bacterial Genetics
896

1. Reproduction Versus Gene Transfer 896
2. Fate of the Incoming DNA After Uptake 897
3. Transformation Is Gene Transfer by Naked DNA 898
4. Gene Transfer by Virus—Transduction 904
5. Transfer of Plasmids Between Bacteria 908
6. Gene Transfer Among Gram-Positive Bacteria 915
7. Artificial Genetics 917
8. Whole-Genome Sequencing 918
- Review Questions 923
- Further Reading 924

CHAPTER 29 Molecular Evolution
925

1. Getting Started—Formation of the Earth 925
2. The Chemical Origin of Life 927
3. Origin of Informational Macromolecules 931
4. Ribozymes and the RNA World 934
5. The Autotrophic Theory of the Origin of Life 938
6. Evolution of DNA and Encoded Proteins 941

7. Ribosomal RNA and the Three Domains	949	Review Questions	967
8. Symbiotic Origin of Eukaryotic Cells	953	Further Reading	968
9. DNA Sequencing and Biological Classification	957		
10. Evolving Sideways: Horizontal Gene Transfer	963	Index	971
