vii

Preface

ix

1. Intestinal Stem Cells and Their Defining Niche

1

Coralie Trentesaux and Béatrice Romagnolo

1. The Mammalian Intestinal Epithelium 1
2. ISC and Their Markers 3
3. Signaling Pathways Regulating Crypt Homeostasis 9
4. Organoid Culture and the Experimental Niche 17
5. The Epithelial Niche: Paneth Cells and Deep Crypt Secretory Cells 19
6. The Mesenchymal Niche 23
7. The Microbial Niche 25
- References 27

2. Multitasking Paneth Cells in the Intestinal Stem Cell Niche

41

Matthias Schewe and Riccardo Fodde

1. Paneth Cells: From Schwalbe and Paneth to the Discovery of Their Secretory Role 41
2. The Intestinal Crypt Stem Cell Niche 46
3. PCs, Dysbiosis, and IBD 60
4. Conclusive Remarks 67
- References 68

3. Intestinal Stem Cells and Their Niche at Homeostasis and Under Stress

77

Lucie Peduto, Philippe J. Sansonetti, and Giulia Nigro

1. The Gut: From Structure to Regeneration 77
2. Concept of Niche 83
3. Conclusions 92
- References 93

4. Extracellular Matrix Remodeling in Intestinal Homeostasis and Disease	99
Sang-Eun Lee, Isobel Massie, Laween Meran, and Vivian S.W. Li	
1. Mammalian Intestine and the Surrounding Niche	100
2. ECM Dynamics in Intestinal Homeostasis and Regeneration	105
3. ECM Dynamics in IBD	111
4. ECM Dynamics in CRC	115
5. Tissue Engineering	122
6. Conclusion	127
Acknowledgments	128
References	128
