Preface	ix
Acknowledgments	xiii
1. From Mendelian Genetics to 4D Genomics	
1.1 Summary	1
1.2 The Emergence of Genomics	2
1.3 Diminishing Power of Gene-Based Genomics	15
1.4 New Genomic Science on the Horizon	37
2. Genes and Genomes Represent Different Biological Entities	
2.1 Summary	53
2.2 The Definition of the Genome	53
2.3 "Parts Versus the Whole": The Emergent Relationship (Which Challenges Reductionism)	57
2.4 ReExamining Gene Theory Predictions	60
2.5 The Conflicting Relationship Between the Gene and the Genome	83
2.6 Genome Context Determines Gene Function	92
2.7 Action Needed	93
3. Genome Chaos and Macrocellular Evolution: How Evolutionary Cytogenetics Unravels the Mystery of Cancer	
3.1 Summary	95
3.2 SOS: We Need a New Conceptual Framework for Cancer Research	96
3.3 Genome Chaos: Rediscovery of the Importance of the Karyotype in Cancer	134
3.4 A New Genomic Model for Cancer Evolution	161
4. Chromosomal Coding and Fuzzy Inheritance: The Genomic Basis of Bio-information and Heterogeneity	
4.1 Summary	169
4.2 Chromosomal or Karyotype Coding	170
4.3 Fuzzy Inheritance	202
4.4 Overlooked Genome Variations	242

5. Why Sex? Genome Reinterpretation Dethrones the Queen	
5.1 Summary	261
5.2 What Is the Purpose of Sex? The Answer Is Not Obvious	262
5.3 Surprise! Asexual Reproduction Does Not Generate Clonal Progenitors!	267
5.4 The Search for the Main Function and Common Mechanism of Sex	273
5.5 The Battle Is On: Changing Concepts	277
5.6 Simulation: Ask the Simplest Question About the Function of Sex	286
5.7 Case Studies: Reinterpretation Using New Framework	289
5.8 Lessons Learned	292
 6. Breaking the Genome Constraint: The Mechanism of Macroevolution	
6.1 Summary	299
6.2 Pattern of Cellular Evolution Challenges Current Evolutionary Theory	300
6.3 Artificial Selection and Natural Selection Are Fundamentally Different	316
6.4 Both Isolated Cases and Isolated Natural Environments Represent Exceptions That Fail to Demonstrate the Relationship Between Micro- and Macroevolution	323
6.5 Maintaining Genome Integrity: The Major Evolutionary Constraint	332
6.6 Implications of Genome Theory to Evolutionary Concepts	338
6.7 Evolution Is True but Its Mechanism Must Be Reexamined	358
6.8 Implications: Creating Artificial Species by Shattering the Genome Followed by Artificial Mating/Genome Selection	381
 7. The Genome Theory: A New Framework	
7.1 Summary	383
7.2 The Rationale for Establishing a Genome-Based Genomic Theory	383
7.3 Unique Considerations for Genome Theory	387
7.4 Outline of the Genome Theory	392
7.5 The Predictions, Implications, Limitations, and Falsifiability of the Genome Theory	413
7.6 Challenges Ahead	421
 8. The Rationale and Challenges of Molecular Medicine	
8.1 Summary	427
8.2 A Brief History: The Promises of Molecular Medicine	427
8.3 The Challenges and Opportunities for Precision Medicine	430
8.4 Future Direction	458
 Epilogue (or Why We Did What We Did)	481
Bibliography	489
Index	535
