CHAPTER 1	Design principles for dynamic microphysiological systems	1
	Madeline Cooper, Joseph L. Charest and Jonathan Coppeta	
1	Introduction	1
1.1	What Are Microfluidic Multiorgan Cell Culture Systems? ...	2
1.2	General Principles for Multiorgan System Development	2
1.3	Value of Microfluidic Multiorgan Systems	3
2	Principles of Multiorgan System Development	4
2.1	Reconfigurability for Diverse, Dynamic Model Integration	4
2.2	Platform Scalability to Accommodate Organ System Complexity	6
2.3	Physiologic Tissue Perfusion	7
2.4	Physiologic Scaling of Tissues and Media	8
2.5	Common Media	9
2.6	Facile, In-Line, Noninvasive Tissue Monitoring	10
2.7	Materials and Methods of Construction	11
3	Multiorgan Systems	12
3.1	Electromagnetic Multiorgan Platform Technology	13
3.2	Demonstration of Platform Fidelity; Liver-Airway Multiorgan System	15
3.3	EVATAR; Multiorgan System Recapitulation of the Female Reproductive Tract	18
4	Limitations of Microfluidic Multiorgan Systems	21
4.1	Engineering and Technological Limitations	22
4.2	Biological Limitations	23
5	Future of Microfluidic Multiorgan Systems	25
	References	25

CHAPTER 2	Microfluidic systems for controlling stem cell microenvironments	31
	Šeila Selimović, Hirokazu Kaji, Hojae Bae and Ali Khademhosseini	
1	Introduction	31
2	Microfluidic Elements for Cell Culture	33
2.1	Cell Sorting and Filtering	33

2.2	Cell Isolation and Storage	36
2.3	Cell Lysis	39
2.4	Surface Patterning.....	39
2.5	Microfluidic Mixing, Concentration Gradients and Combinatorial Solutions	40
2.6	On-Chip Cell Culture	42
2.7	Cell Analysis On-Chip	43
3	Controlling Cellular Microenvironments	44
3.1	Soluble Factors and Chemical Stimuli.....	44
3.2	Mechanical Stimuli.....	46
3.3	Electrical Stimuli	48
3.4	Cell-Cell Contact and Co-Culture.....	49
3.5	Development and Mimicking of Extracellular Matrices	50
4	Challenges and Outlook	51
	Acknowledgments	52
	References.....	52
CHAPTER 3 Microfluidic platforms with nanoscale features.....		65
Yong Yang and Kam W. Leong		
1	Introduction.....	65
2	Engineering of Nanoscale Features.....	66
2.1	Fabrication of Irregular Nanoscale Features.....	67
2.2	Fabrication of Regular Nanoscale Features	68
3	Assembly of PDMS-Based Microfluidic Platforms.....	71
3.1	Reversible Assembly	71
3.2	Irreversible Bonding.....	72
3.3	Microtransfer Assembly	72
4	Microfluidic Platforms With Embedded Nanoscale Features for Cell Studies	74
4.1	Tumor Cell Isolation	74
4.2	Stem Cell Regulation.....	77
5	Summary	83
	Acknowledgment.....	84
	References.....	84
CHAPTER 4 Microfabricated kidney tissue models		91
Else M. Vedula and Joseph L. Charest		
1	Introduction.....	91
2	Significance of Microfabricated Kidney Tissue Models	92
3	Kidney Structure and Function Relationship	92
4	Traditional Kidney Tissue Models.....	95

5	Crucial Signaling Elements for Kidney Tissue Models	96
5.1	Signaling Elements Delivered via Cell Substrate	97
5.2	Signaling Elements Delivered via Fluid Flow	100
6	Review of Current Microfabricated Kidney Tissue Models	101
6.1	Microfabricated Kidney Models With Controlled Flow-Induced Shear Stress	103
6.2	Microfabricated Kidney Models With Porous Membranes and Scaffolds	105
6.3	Microfabricated Kidney Models With User-Defined Substrate Topography	109
6.4	Microfabricated Kidney Models With Physiological Function	109
7	Summary and Future Direction	111
	References	114
CHAPTER 5	Application of complex in vitro models (CIVMs) in drug discovery for safety testing and disease modeling	121
	Claire G. Jeong, Gianni Dal Negro, Spiro Getsios and Jason E. Ekert	
1	Introduction: General Concept (Overarching Theme) of Complex in vitro Models (CIVMs)	121
1.1	The CIVM Dawn in the Pharmaceutical Landscape	121
1.2	Expected Role of Complex in vitro Models in R&D	122
1.3	The Global Market of Complex in vitro Methods	123
1.4	Getting Closer to Human Patient Modeling: Current Gaps and Future Challenges	123
1.5	Qualification of CIVM	125
2	Complex in vitro Liver Models	125
2.1	Backgrounds	125
2.2	Liver Models	129
2.3	Remaining Challenges and Limitations of Liver in vitro Models and Future Perspectives	132
3	Complex in vitro Skin Models	134
4	Complex in vitro Oncology Models	135
4.1	Background on Tissue Microenvironment (TME) for Solid Tumors	135
4.2	Tumor Models	136
4.3	Challenges and Limitations	142

5	Multi Organ on a Chip Models	142
5.1	Description of the Types of Multi Organ on a Chip	142
5.2	Examples of MOOCs Linked to Drug Discovery	143
6	Conclusion	148
	References	149
CHAPTER 6	Hepatic microphysiological systems: Current and future applications in drug discovery and development.....	159
	Ajit Dash and William R. Proctor	
1	Introduction.....	159
2	Current Emerging Technologies	160
2.1	Overview	160
2.2	Complex Two-Dimensional (2D) Plated Coculture Systems	161
2.3	Three-Dimensional (3D) Static Hepatic Cultures.....	162
2.4	Flow Based 3D Mono or Coculture Systems	163
3	Current Applications and Scope.....	166
3.1	Overview	166
3.2	Using Microphysiological Systems for Drug-Disposition Studies.....	166
3.3	Drug Toxicity Testing With Hepatic Microphysiological Systems	169
3.4	Modeling Liver Disease in Microphysiological Systems.....	172
4	Considering Qualification and Contexts of Use for Liver MPS.....	177
5	Conclusion and Future Directions.....	181
	References.....	181
CHAPTER 7	Microphysiological models of human organs: A case study on microengineered lung-on-a-chip systems	187
	Jeongyun Seo and Dongeun Huh	
1	Introduction.....	187
2	Design Principle 1: Mimicking Structural and Multicellular Complexity.....	188
3	Design Principle 2: Recapitulating Mechanical and Biochemical Microenvironment.....	192
4	Case Study: Lung-on-a-Chip Technology.....	195
4.1	Early Demonstrations of Human Lung-on-a-Chip	197
4.2	Recent Advances in Lung-on-a-Chip Technology	200
5	Future Prospects and Important Challenges.....	204
	References.....	205

CHAPTER 8	Cardiac tissue models	209
	Joycelyn K. Yip and Megan L. McCain	
1	Introduction	209
2	Myocardial Tissue: The Minimal Functional Unit of the Human Heart	210
2.1	Cells in the Myocardium	210
2.2	Extracellular Matrix in the Myocardium	212
2.3	Physiology of the Myocardium	213
3	Sources of Cardiac Myocytes	214
3.1	Primary Cardiac Myocytes	214
3.2	Human Stem Cell-Derived Cardiac Myocytes	215
4	Engineering and Interrogating two-dimensional Cardiac Tissues	217
4.1	Fabrication Technologies for Two-Dimensional Cardiac Tissues	217
4.2	Sensing Technologies for Two-Dimensional Cardiac Tissues	220
5	Engineering and Interrogating three-dimensional Cardiac Tissues	223
5.1	Fabrication Technologies for Three-Dimensional Cardiac Tissues	224
5.2	Sensing Technologies for Three-Dimensional Cardiac Tissues	227
6	Screening Drug Safety and Efficacy in Cardiac Microphysiological Systems	228
6.1	Screening Cardiotoxicity	228
6.2	Modeling Acquired Cardiac Diseases	233
6.3	Modeling Inherited Cardiac Diseases	234
7	Outlook	236
7.1	Maturation of hiPSC-Derived Cardiac Myocytes	236
7.2	Integration of Non-Myocyte Cell Populations	236
7.3	Coupling With Other Organs	237
8	Conclusion	237
	References	238
CHAPTER 9	Neural Tissue Microphysiological Systems in the Era of Patient-Derived Pluripotent Stem Cells	249
	Alison E. Mungenast, Rebecca Aron, James D. White, Daniel F. Tardiff and Waseem K. Raja	
1	Introduction	249

2	Components of in vitro Neural Tissue Models	252
2.1	Cellular Components	252
2.2	Materials and Format of Cell Culture	255
2.3	Blood Brain Barrier/Neurovascular Unit	256
3	Neurodegenerative Disease Models	258
3.1	Alzheimer's Disease	258
3.2	Parkinson's Disease	261
3.3	Huntington's Disease	263
3.4	Amyotrophic Lateral Sclerosis	264
3.5	Microfluidic Platform to Model Neurodegenerative Disease	265
4	Neurodevelopmental and Neuropsychiatric Disease Models	266
4.1	Autism Spectrum Disorders (ASD)	267
4.2	Prenatal Exposure to Environmental Hazards	270
4.3	Rare Neurodevelopmental Disorders	270
4.4	Down Syndrome	271
4.5	Schizophrenia and Bipolar Disease	272
5	Nerve Injury Models	272
5.1	Brain and Spine Injury Models	273
5.2	Neural Toxicity Models	274
5.3	Microfluidic Lab on a Chip Platform for Studying Neural Injury	276
6	Conclusion	277
	References	277
CHAPTER 10	A high-throughput system to probe and direct biological functions driven by complex hemodynamic environments	297
	Peter Mack, Ahmad S. Khalil, Eli J. Weinberg, Luigi Adamo, Bendix R. Slegtenhorst, Jeffrey T. Borenstein and Guillermo García-Cardena	
1	Introduction	297
2	Models for Vascular Diseases and Toxicities	298
3	Engineering a High-Throughput Flow System	301
3.1	System Overview	301
3.2	Mechanical System Design and Construction	303
3.3	Finite Element Analysis of Wall Shear Stress	305
3.4	Endothelial Cell Culture	306
3.5	Endothelial Cell Staining and Morphological Studies	306
3.6	RNA Isolation and Gene Expression Measurement	307

3.7 Embryo Isolation and Colony Forming Unit (CFU) Assay.....	307
3.8 Statistical Analysis	308
4 Application of the HTFS System	308
4.1 Design and Characterization of the High-Throughput Flow System	308
4.2 Biological Validation of HTFS With Morphological and Gene Expression Indicators of Endothelial Response to Shear Stress.....	309
4.3 Endothelial Cell-Based Screening Under Atheroprotective Flow Environments	311
4.4 Hematopoietic Stem Cell-Based Screening Under Embryonic Flow Environments.....	312
5 Discussion	313
Acknowledgments	319
References.....	319

CHAPTER 11 Body-on-a-chip systems: Design, fabrication, and applications 323

Mandy B. Esch and Gretchen J. Mahler

1 Introduction.....	323
2 A Primer on Body-on-a-Chip Systems	324
2.1 Body-on-a-Chip Devices and PBPK Models.....	324
2.2 Body-on-a-Chip Design.....	328
2.3 Fabricating Tissue-on-a-Chip and Body-on-a-Chip Devices.....	334
2.4 Measuring Tissue Responses Within Body-on-a-Chip Platforms.....	335
2.5 Operating Body-on-a-Chip Devices	337
3 Mimicking the Metabolism of the Human Body: Examples of Proof-of-Concept Studies.....	338
3.1 Development of Cell Culture Analogs (CCAs).....	338
3.2 μ CCA-Based Body-on-a-Chip Systems for Toxicity Testing	340
3.3 Other Multiorgan Culture Systems	342
4 What is the Future of Body-on-a-Chip Systems?	343
4.1 Potential	343
4.2 Needs.....	343
4.3 In Vitro to in vivo Extrapolation (IVIVE).....	344
4.4 Commercialization.....	345

5	Conclusions.....	345
	Disclaimer	346
	References.....	346
CHAPTER 12	On-chip disease models of the human retina	351
	Li-Jiun Chen, Bibek Raut and Hirokazu Kaji	
1	Introduction.....	351
2	Retina Structure, Diseases and Ocular Drugs.....	353
2.1	Anatomical Structure.....	353
2.2	The Barriers of the Retina.....	353
2.3	Retinal Diseases.....	354
2.4	Treatments for Retinal Diseases.....	356
3	Engineering the Vascular Environment	357
3.1	Fabrication of Biomimetic Microvascular Models	359
3.2	Evaluation of the Blood-Retinal Barrier Function	361
3.3	Effect of Shear Stress	363
3.4	Thrombosis Studies	364
3.5	Neovascularization Studies.....	364
3.6	Signaling Studies	365
4	Outlook and Future Challenges.....	366
	References.....	368
	Index	373
