Section I

Computational Analysis of Enzymatic Phosphoryl Transfer

1. Empirical Valence Bond Simulations of Organophosphate Hydrolysis: Theory and Practice	3
Miha Purg and Shina Caroline Lynn Kamerlin	
1. Introduction	4
2. The Empirical Valence Bond Approach	8
3. Empirical Valence Bond Simulations in Practice	14
4. Empirical Valence Bond Simulations: Sample Results	31
5. Technical Considerations	36
6. Overview and Conclusions	46
References	46
2. Analysis of Phosphoryl-Transfer Enzymes with QM/MM Free Energy Simulations	53
Daniel Roston, Xiya Lu, Dong Fang, Darren Demapan, and Qiang Cui	
1. Introduction	54
2. Background on Computational Methods	55
3. Case Studies	64
4. Concluding Remarks	80
Acknowledgments	81
References	81

Section II

Structure, Mechanism and Evolution of Phosphatases

3. Defining Dynamics of Membrane-Bound Pyrophosphatases by Experimental and Computational Single-Molecule FRET	93
Steven P.D. Harborne, Jannik Strauss, Ainoleena Turku, Matthew A. Watson, Roman Tuma, Sarah A. Harris, and Adrian Goldman	
1. Introduction	95
2. Combining Experimental and Computational Methods for Optimizing the Attachment of Fluorescent Dyes for Single-Molecule FRET	99

v

3. Summary and Conclusions	121
Acknowledgment	128
References	128
4. A Simple Strategy to Determine the Dependence of Membrane-Bound Pyrophosphatases on K^+ as a Cofactor	131
Jannik Strauss, Craig Wilkinson, Keni Vidilaseris, Steven P.D. Harborne, and Adrian Goldman	
1. Introduction	132
2. Preliminary Sequence-Based Determination of K^+ Dependency	141
3. Summary and Conclusion	152
Acknowledgments	153
References	153
5. Crystallization of Liganded Phosphatases in the HAD Superfamily	157
Christine M. Harvey, Katherine H. O'Toole, and Karen N. Allen	
1. Introduction	159
2. Substrate and Product Complexes	164
3. Ground-State, Intermediate, and Transition-State Mimic Complexes	171
4. Inhibitors	177
5. Summary and Conclusion	180
References	181
Section III	
Substrate Specificity and Enzyme Conformational States	
6. Structure, Mechanism, and Substrate Profiles of the Trinuclear Metallophosphatases from the Amidohydrolase Superfamily	187
Swapnil V. Ghodge and Frank M. Raushel	
1. Introduction	188
2. L-Histidinol Phosphate Phosphatase	190
3. Cyclic Phosphate Dihydrolase	198
4. 3',5'-Adenosine Bisphosphate-3'-Phosphatase	204
5. RNase AM	209
References	213
Further Reading	216

7. Affinities and Comparisons of Enzyme States by Principal Component Analysis of NMR Spectra, Automated using TREND Software	217
Jia Xu and Steven R. Van Doren	
1. Introduction	218
2. Insights Available Semiautomatically using TREND NMR Software	219
3. Capabilities of TREND NMR Suite with Examples	220
4. NMR Data	228
5. Layout and Usage of TREND NMR Software	229
6. Conclusions	237
Acknowledgments	238
References	238
8. Assessment and Impacts of Phosphorylation on Protein Flexibility of the α-D-Phosphohexomutases	241
Kyle M. Stiers and Lesa J. Beamer	
1. Introduction	242
2. Assessment and Modulation of the Phosphorylation State of the Catalytic P-Ser	244
3. Straightforward Assays to Characterize Differences between the Phosphorylated and Unphosphorylated Enzyme States	251
4. Crystallographic Refinement of Partial Occupancy P-Ser	261
5. Summary and Conclusion	264
Acknowledgments	264
References	264
9. Chemical Tools for Studying the Impact of <i>cis/trans</i> Prolyl Isomerization on Signaling: A Case Study on RNA Polymerase II Phosphatase Activity and Specificity	269
Nathaniel Tate Burkholder, Brenda Medellin, Seema Irani, Wendy Matthews, Scott A. Showalter, and Yan Jessie Zhang	
1. Introduction	270
2. Using <i>cis/trans</i> -Locked Serine-Proline Isosteres to Study Activity and Specificity of CTD Phosphatases	274
3. Determination of Phosphatase Proline Conformation Specificity using ^{13}C NMR	289
4. Selective Regulation of Phosphatase Activity by PIN1 Prolyl Isomerization	292

5. Summary and Conclusion	294
Acknowledgments	295
References	295
Further Reading	297

Section IV

Delineating the Action of Phosphatases in Signaling and Regulation

10. Quantitative Analysis of Intracellular Response Regulator Phosphatase Activity of Histidine Kinases	301
Rong Gao and Ann M. Stock	
1. Introduction	302
2. Phos-Tag Gel Analyses of RR Dephosphorylation	305
3. Transcription Reporter Assays	307
4. Modeling the RR Dephosphorylation Kinetics	313
5. Summary	318
References	318
11. Measuring the Activities of Two-Component Regulatory System Phosphatases	321
Robert B. Bourret and Ruth E. Silversmith	
1. Overview	322
2. Relevant Properties of Chemotaxis TCS	328
3. In Vitro Assays of Chemotaxis TCS Phosphatases	329
4. Relevant Properties of Nonchemotaxis TCS	340
5. Assay Modifications for Nonchemotaxis TCS Phosphatases	342
Acknowledgments	347
References	347
12. Assembly of PGAM5 into Multimeric Complexes Provides a Mechanism for Allosteric Regulation of Phosphatase Activity	353
Peter Tipton, Tong Su, and Mark Hannink	
1. Introduction	354
2. Expression and Purification of PGAM5	355
3. Isolation of Different PGAM5 Complexes using Size-Exclusion Chromatography	360
4. Phosphatase Assay using Synthetic Phosphopeptides	363

5. Analysis of Kinetic Data	366
6. Summary and Conclusion	369
References	371
13. Purification of Lipin and Measurement of Phosphatidic Acid Phosphatase Activity from Liposomes	373
Mitchell E. Granade and Thurl E. Harris	
1. Introduction	374
2. Purification of Lipins	375
3. PAP Assay	380
4. Summary and Conclusion	385
References	386
14. Combining SAMDI Mass Spectrometry and Peptide Arrays to Profile Phosphatase Activities	389
Lindsey C. Szymczak, Che-Fan Huang, Eric J. Berns, and Milan Mrksich	
1. Introduction	390
2. Preparation of SAMDI Peptide Arrays	394
3. Profiling Phosphatase Activity using SAMDI-MS	397
4. Summary and Conclusion	401
Acknowledgments	402
References	402
15. Protein Chemical Approaches to Understanding PTEN Lipid Phosphatase Regulation	405
Daniel R. Dempsey and Philip A. Cole	
1. Introduction	406
2. Production of Semisynthetic PTENs	408
3. C-Terminal Phosphorylation Impact on Enzymatic Function of PTEN	412
4. Structural Analysis of Phospho-PTEN	414
5. Phospho-PTEN and Protein Ubiquitination	417
6. Summary and Future Directions	418
Acknowledgments	419
References	419
Further Reading	422
