2.13 Summary 53
2.14 Questions 53

1. On the Nature of Cells

1.1 Introduction: What Is a Cell?	1
1.2 The Basic Unit of Life	4
1.3 The Chemical Composition of Cells	7
1.4 A Sense of Cellular Scale	8
1.5 The Energetics of Cells	9
1.6 Are There Limits to the Mechanistic View?	11
1.7 The Mechanistic Viewpoint and God	12
1.8 What Is Cell Biology?	13
1.9 Summary	14
1.10 Questions	15

2. Plasma Membrane

2.1 The Cell Boundary	17
2.2 Topology of the Cell	17
2.3 Evidence for the Existence of a Plasma Membrane	18
2.4 Structure of the Plasma Membrane	22
2.5 Isolation of the Plasma Membrane	25
2.6 Chemical Composition of the Plasma Membrane	27
2.7 Transport Physiology	33
2.8 Electrical Properties of the Plasma Membrane	41
2.9 Characterization of Two Transport Proteins of the Plasma Membrane	43
2.9.1 Proton-Pumping ATPase	43
2.9.2 The K ⁺ Channel	46
2.10 Plasma Membrane—Localized Physiological Responses	50
2.10.1 Guard Cells	50
2.10.2 Motor Organs	50
2.10.3 Action Potentials	51
2.10.4 Cell Polarization	51
2.11 Structural Specializations of the Plasma Membrane	51
2.12 The Cytoskeleton—Plasma Membrane—Extracellular Matrix Continuum	52

3. Plasmodesmata

3.1 The Relationship Between Cells and the Organism	55
3.2 Discovery and Occurrence of Plasmodesmata	57
3.3 Structure of Plasmodesmata	57
3.4 Isolation and Composition of Plasmodesmata	60
3.5 Permeability of Plasmodesmata	61
3.6 Summary	65
3.7 Questions	65

4. Endoplasmic Reticulum

4.1 Significance and Evolution of the Endoplasmic Reticulum	67
4.2 Discovery of the Endoplasmic Reticulum	67
4.3 Structure of the Endoplasmic Reticulum	69
4.4 Structural Specializations That Relate to Function	70
4.5 Isolation of RER and SER	71
4.6 Composition of the Endoplasmic Reticulum	72
4.7 Function of the Endoplasmic Reticulum	73
4.7.1 Lipid Synthesis	73
4.7.2 Protein Synthesis on the Endoplasmic Reticulum	74
4.7.3 Protein Glycosylation (Carbohydrate Synthesis)	78
4.7.4 Calcium Regulation	80
4.7.5 Phenylpropanoid and Flavonoid Synthesis	81
4.8 Summary	81
4.9 Questions	81

5. Peroxisomes

5.1 Discovery of Microbodies	83
5.2 Isolation of Peroxisomes	83
5.3 Composition of Peroxisomes	83

5.4 Function of Peroxisomes	84	8. Movement Within the Endomembrane System	
5.4.1 β -Oxidation	84	8.1 Discovery of the Secretory Pathway	133
5.4.2 Photorespiration	85	8.2 Movement to the Plasma Membrane and the Extracellular Matrix	138
5.5 Relationship Between Glyoxysomes and Peroxisomes	89	8.2.1 Movement Between the Endoplasmic Reticulum and the Golgi Apparatus	139
5.6 Metabolite Channeling	92	8.2.2 Movement From the Golgi Apparatus to the Plasma Membrane	140
5.7 Other Functions	94	8.3 Movement From the Endoplasmic Reticulum to the Golgi Apparatus to the Vacuole	141
5.8 Biogenesis of Peroxisomes	95	8.4 Movement From the Endoplasmic Reticulum to the Vacuole	142
5.9 Evolution of Peroxisomes	97	8.5 Movement From the Plasma Membrane to the Endomembranes	142
5.10 Summary	97	8.5.1 Fluid-Phase Endocytosis	142
5.11 Questions	98	8.5.2 Receptor-Mediated Endocytosis	146
		8.5.3 Piggyback Endocytosis	147
6. Golgi Apparatus		8.6 Disruption of Intracellular Secretory and Endocytotic Pathways	147
6.1 Discovery and Structure of the Golgi Apparatus	99	8.7 Summary	148
6.2 Polarity of the Golgi Stack	101	8.8 Questions	149
6.3 Isolation of the Golgi Apparatus	103		
6.4 Composition of the Golgi Apparatus	103	9. Cytoplasmic Structure	
6.5 Function of the Golgi Apparatus	103	9.1 Historical Survey of the Study of Cytoplasmic Structure	151
6.5.1 Processing of Glycoproteins	104	9.2 Chemical Composition of Protoplasm	155
6.5.2 Synthesis of Carbohydrates	104	9.3 Physical Properties of Cytoplasm	156
6.5.3 Transport of Sugars	105	9.3.1 Viscosity of the Cytoplasm	157
6.6 The Mechanism of Movement From Cisterna to Cisterna	105	9.3.2 Elasticity of the Cytoplasm	166
6.7 Positioning of the Golgi Apparatus	110	9.4 Microtrabecular Lattice	167
6.8 Summary	111	9.4.1 Function of the Microtrabecular Lattice in Polarity	167
6.9 Questions	111	9.5 Summary	168
7. The Vacuole		9.6 Questions	169
7.1 Discovery of the Vacuole	113		
7.2 Structure, Biogenesis, and Dynamic Aspects of Vacuoles	113	10. Actin- and Microfilament-Mediated Processes	
7.3 Isolation of Vacuoles	119	10.1 Discovery of Actomyosin and the Mechanism of Muscle Movement	171
7.4 Composition of Vacuoles	120	10.2 Actin in Nonmuscle Cells	174
7.5 Transport Across the Vacuolar Membrane	120	10.2.1 Temporal and Spatial Localization of Actin in Plant Cells	175
7.5.1 Proton-Translocating Pumps	122	10.2.2 Biochemistry of Actin	176
7.5.2 ATP-Binding Cassette Transporters or Traffic ATPases	123	10.2.3 Biochemistry of Myosins	177
7.5.3 Slowly Activated Vacuolar Channels	123		
7.5.4 Water Channels	124		
7.6 Functions of the Vacuole	124		
7.6.1 Proteolysis and Recycling	124		
7.6.2 Taking up Space	126		
7.6.3 Storage and Homeostasis	126		
7.6.4 Role in Turgor Generation	129		
7.6.5 Other Functions	131		
7.7 Biotechnology	131		
7.8 Summary	131		
7.9 Questions	131		

10.3 Force-Generating Reactions Involving Actin	178	11.8 Intermediate Filaments	205
10.3.1 Actomyosin	178	11.9 Centrin-Based Motility	205
10.3.2 Polymerization of Actin Filaments	179	11.10 Tensegrity in Cells	205
10.4 Actin-Based Motility	180	11.11 Summary	206
10.4.1 Cytoplasmic Streaming	180	11.12 Questions	206
10.4.2 Chloroplast Movements	184		
10.4.3 Cell Plate Reorientation in <i>Allium</i>	185	12. Cell Signaling	
10.4.4 Secretion of Vesicles Involved in Tip Growth and Auxin-Induced Growth	185	12.1 The Scope of Cell Regulation	207
10.4.5 Contractile Vacuoles	185	12.2 What Is Stimulus-Response Coupling?	208
10.5 Role of Actin in Membrane Transport	185	12.3 Receptors	210
10.6 Summary	185	12.4 Cardiac Muscle as a Paradigm for Understanding the Basics of Stimulus-Response Coupling	211
10.7 Questions	186	12.5 A Kinetic Description of Regulation	214
		12.5.1 Early History of Kinetic Studies	214
11. Tubulin and Microtubule-Mediated Processes		12.5.2 Kinetics of Enzyme Reactions	215
11.1 Discovery of Microtubules in Cilia and Flagella and the Mechanism of Movement	187	12.5.3 Kinetics of Diffusion and Dehydration	218
11.2 Microtubules in Nonflagellated or Nonciliated Cells and the Discovery of Tubulin	191	12.5.4 A Thermodynamic Analysis of the Signal-To-Noise Problem	221
11.2.1 Temporal and Spatial Localization of Microtubules in Animal and Plant Cells	193	12.6 Ca²⁺ Signaling System	221
11.2.2 Characterization of Microtubule-Associated Motor Proteins	197	12.7 Mechanics of Doing Experiments to Test the Importance of Ca²⁺ as a Second Messenger	223
11.3 Force-Generating Reactions Involving Tubulin	198	12.8 Specific Signaling Systems in Plants Involving Ca²⁺	225
11.3.1 Sliding	198	12.8.1 Double Fertilization	225
11.3.2 Polymerization/Depolymerization	199	12.8.2 Ca ²⁺ -Induced Secretion in Barley Aleurone Cells	225
11.4 Tubulin-Based Motility	199	12.8.3 Excitation-Cessation of Streaming Coupling in Characean Internodal Cells	225
11.5 Microtubules and Cell Shape	199	12.8.4 Regulation of Turgor in Cells	226
11.5.1 Apical Meristems	200	12.9 Phosphatidylinositol Signaling System	231
11.5.2 Tracheary Elements	200	12.9.1 Components of the System	231
11.5.3 Guard Cells	201	12.9.2 Phosphatidylinositol Signaling in Guard Cell Movement	232
11.5.4 Extracellular Matrix of <i>Oocystis</i>	202	12.10 The Role of Ions in Cells	234
11.5.5 Mechanism of Microtubule-Mediated Cellulose Orientation	202	12.11 Summary	234
11.5.6 Tip-Growing Cells	204	12.12 Questions	234
11.6 Various Stimuli Affect That Microtubule Orientation	204		
11.7 Microtubules and Cytoplasmic Structure	205	13. Chloroplasts	
		13.1 Discovery of Chloroplasts and Photosynthesis	235
		13.1.1 Discovery of Photosynthesis	236
		13.1.2 Discovery and Structure of Chloroplasts	239
		13.2 Isolation of Chloroplasts	243
		13.3 Composition of the Chloroplasts	243

13.4 Thermodynamics and Bioenergetics in Photosynthesis	244	15. Origin of Organelles	
13.4.1 Laws of Thermodynamics	245	15.1 Autogenous Origin of Organelles	293
13.4.2 Molecular Free Energy of Some Photosynthetic Processes	246	15.2 Endosymbiotic Origin of Chloroplasts and Mitochondria	294
13.4.3 Molecular Free Energy of Oxidation-Reduction Reactions	247	15.3 Origin of Peroxisomes, Centrioles, and Cilia	296
13.5 Organization of the Thylakoid Membrane and the Light Reactions of Photosynthesis	250	15.4 Ongoing Process of Endosymbiosis	297
13.5.1 Photosystem Complexes	252	15.5 Primordial Host Cell	298
13.5.2 Cytochrome _{b6-f} Complex	253	15.6 Symbiotic DNA	299
13.5.3 ATP Synthase	253	15.7 Summary	299
13.5.4 Light Reactions of Photosynthesis	255	15.8 Questions	299
13.6 Physiological, Biochemical, and Structural Adaptations of the Light Reactions	257	16. The Nucleus	
13.7 Fixation of Carbon	258	16.1 The Discovery of the Nucleus and Its Role in Heredity, Systematics, and Development	301
13.8 Reduction of Nitrate and the Activation of Sulfate	260	16.2 Isolation of Nuclei	306
13.9 Chloroplast Movements and Photosynthesis	261	16.3 Structure of the Nuclear Envelope and Matrix	306
13.10 Genetic System of Plastids	262	16.4 Chemistry of Chromatin	309
13.11 Biogenesis of Plastids	265	16.5 Morphology of Chromatin	314
13.12 Summary	266	16.6 Cell Cycle	316
13.13 Questions	267	16.7 Chromosomal Replication	318
14. Mitochondria		16.8 Transcription	320
14.1 Discovery of the Mitochondria and Their Function	269	16.9 Nucleolus and Ribosome Formation	325
14.1.1 History of the Study of Respiration	269	16.10 Summary	326
14.1.2 History of the Structural Studies in Mitochondria	271	16.11 Questions	327
14.2 Isolation of Mitochondria	273	17. Ribosomes and Proteins	
14.3 Composition of Mitochondria	273	17.1 Nucleic Acids and Protein Synthesis	329
14.3.1 Proteins	273	17.2 Protein Synthesis	331
14.3.2 Lipids	274	17.3 Protein Activity	335
14.4 Cellular Geography of Mitochondria	274	17.4 Protein Targeting	337
14.5 Chemical Foundation of Respiration	274	17.5 Protein-Protein Interactions	337
14.5.1 Fitness of Adenosine Triphosphate as a Chemical Energy Transducer	275	17.6 Protein Degradation	338
14.5.2 Glycolysis	278	17.7 Structure of Proteins	339
14.5.3 Cellular Respiration	280	17.8 Functions of Proteins	340
14.6 Other Functions of the Mitochondria	288	17.9 Techniques of Protein Purification	340
14.7 Genetic System in Mitochondria	288	17.10 Plants as Bioreactors to Produce Proteins for Vaccines	341
14.8 Biogenesis of Mitochondria	289	17.11 Summary	341
14.9 Summary	290	17.12 Questions	341
14.10 Questions	291	18. The Origin of Life	
		18.1 Spontaneous Generation	343
		18.2 Concept of Vitalism	344
		18.3 The Origin of the Universe	345
		18.4 Geochemistry of the Early Earth	348
		18.5 Prebiotic Evolution	349

18.6 The Earliest Darwinian Ancestor and the Last Common Ancestor	354	20.9 Summary	408
18.7 Diversity in the Biological World	360	20.10 Epilog	408
18.8 The Origin of Consciousness	361	20.11 Questions	410
18.9 Concept of Time	362		
18.10 Summary	363	21. Omic Science: Platforms and Pipelines	
18.11 Questions	364		
19. Cell Division		21.1 One, Two, Three, Infinity	411
19.1 Mitosis	365	21.2 Genomics	414
19.1.1 Prophase	367	21.2.1 The Relationship Between a Trait and the Sequence of DNA	415
19.1.2 Prometaphase	369	21.2.2 Sequencing DNA by Synthesis	417
19.1.3 Metaphase	371	21.2.3 Gene Discovery and Annotation	438
19.1.4 Anaphase	374	21.2.4 Targeted Characterization of the Genome	446
19.1.5 Telophase	380	21.2.5 The Postgenomic Era: Functional Genomics	448
19.2 Regulation of Mitosis	380	21.3 Transcriptomics	448
19.3 Energetics of Mitosis	380	21.3.1 Microarrays	449
19.4 Division of Organelles	381	21.3.2 RNA-Seq	452
19.5 Cytokinesis	381	21.4 Proteomics	454
19.5.1 Cell Plate Formation	381	21.4.1 Characterizing the Proteome Using Polyacrylamide Gel Electrophoresis	454
19.5.2 Isolation of Cell Plates	384	21.4.2 Sequencing of a Polypeptide by Stepwise Degradation	455
19.5.3 Orientation of the Cell Plate	385	21.4.3 Sequencing of a Polypeptide by Mass Spectrometry	456
19.6 Summary	387	21.4.4 Characterizing the Proteome by Mass Spectrometry	458
19.7 Questions	388	21.5 Interactomics	461
20. Extracellular Matrix		21.6 Metabolomics	462
20.1 Relationship of the Extracellular Matrix of Plant and Animal Cells	389	21.7 Phenomics	464
20.2 Isolation of the Extracellular Matrix of Plants	391	21.8 Pan-Omics	465
20.3 Chemical Composition and Architecture of the Extracellular Matrix	392	21.9 Single-Cell Omics	465
20.4 Extracellular Matrix—Plasma Membrane—Cytoskeletal Continuum	394	21.10 One, Two, Three...Infinity Revisited	466
20.5 Biogenesis of the Extracellular Matrix	395	21.11 Summary	467
20.5.1 Plasma Membrane	395	21.12 Questions	470
20.5.2 Cytoskeleton	396	Appendix 1. SI Units, Constants, Variables, and Geometric Formulae	473
20.5.3 Endomembrane System	396	Appendix 2. A Cell Biologist's View of Non-Newtonian Physics	477
20.5.4 Self-Assembly of the Extracellular Matrix	397	Appendix 3. Calculation of the Total Transverse Force and Its Relation to Stress	485
20.6 Permeability of the Extracellular Matrix	397	Appendix 4. Laboratory Exercises	487
20.7 Mechanical Properties of the Extracellular Matrix	398	Bibliography	497
20.8 Cell Expansion	401	Index	719
20.8.1 Forces, Pressures, and Stresses and Their Relationship to Strain	401
