Preface xv

Section I

Structural Approaches

1. Structural Analysis of Anesthetics in Complex with Soluble Proteins 3

Patrick J. Loll

- 1. Introduction 4
- 2. Crystallographic Issues Relevant to Analysis of Anesthetic Binding 5
- 3. Crystallizing Apoferritin with Isoflurane and Propofol 11
- 4. Protocol 12
- 5. Analysis of the Structure 15
- 6. Summary 18
- Acknowledgment 18
- References 19

2. X-Ray Crystallographic Studies for Revealing Binding Sites of General Anesthetics in Pentameric Ligand-Gated Ion Channels 21

Qiang Chen, Yan Xu, and Pei Tang

- 1. Introduction 22
- 2. Production of Monodisperse pLGICs with High Purity 23
- 3. Crystallization of pLGICs in the Absence and Presence of General Anesthetics 28
- 4. Functional Validation of the Bound Anesthetics 38
- 5. Case Studies 38
- Acknowledgments 41
- References 41

3. Solution NMR Studies of Anesthetic Interactions with Ion Channels 49

Vasyl Bondarenko, Marta Wells, Yan Xu, and Pei Tang

- 1. Introduction 50
- 2. Preparation of Ion Channels for Solution NMR 52
- 3. NMR Methods to Identify Anesthetics Binding Sites and Detect Anesthetic-Induced Dynamics Changes 55

4. Case Studies	58
Acknowledgments	61
References	61
4. Time-Resolved Neutron Interferometry and the Mechanism of Electromechanical Coupling in Voltage-Gated Ion Channels	67
J. Kent Blasie	
1. Introduction	68
2. Methods	71
3. Results	82
4. Discussion	85
5. Conclusions and Future Prospects	87
Acknowledgments	88
References	89
Section II	
Evolving Biophysical Technologies	
5. Fluorescent Anesthetics	93
Daniel J. Emerson and Ivan J. Dmochowski	
1. Introduction	94
2. Value of 1-AMA for Studying General Anesthetic Mechanisms	95
3. Value of 1-AZA for Studying General Anesthetic Mechanisms	96
4. Experiments	98
References	101
6. Investigation of Anesthetic-Protein Interactions by a Thermodynamic Approach	103
Hasan Babazada and Renyu Liu	
1. Introduction	104
2. ITC Measurements	105
3. Conclusion	111
References	111
7. Electron Spin Resonance (EPR) in <i>Drosophila</i> and General Anesthesia	115
Luca Turin and Efthimios M.C. Skoulakis	
1. Introduction	116
2. Electron Spin Resonance Primer	117

3. Quantitation	119
4. Sample Preparation	119
5. Measurements	120
6. Origin of the Spin Signal in <i>Drosophila</i>	122
7. Conclusions	127
References	127
8. Giant Plasma Membrane Vesicles: An Experimental Tool for Probing the Effects of Drugs and Other Conditions on Membrane Domain Stability	129
Zoe Gerstle, Rohan Desai, and Sarah L. Veatch	
1. Introduction	130
2. GPMV Formation	133
3. Measuring GPMV Miscibility Transition Temperatures	138
4. Summary and Conclusion	146
Acknowledgments	147
References	147

Section III

In vivo Technologies; Established and Evolving

9. Anesthetic Drug Discovery and Development: A Case Study of Novel Etomidate Analogs	153
Megan McGrath and Douglas E. Raines	
1. Introduction	154
2. Etomidate Analog Design Strategies	155
3. Testing Novel Etomidate Analogs for Hypnotic Activity Using Loss of Righting Reflexes Assays	157
4. Testing Novel Etomidate Analogs for Adrenocortical Inhibitory Activity	161
5. Summary and Conclusion	166
Acknowledgments	167
References	167
10. Optoanesthesia: Use of Anesthetic Photolabels In Vivo	171
Andrew R. McKinstry-Wu and Max B. Kelz	
1. Introduction	171
2. Anesthetic Photolabel Availability	173
3. Anesthetic Effects in a Circumscribed Region	173
4. Slice Electrophysiology	174
5. Photoaddition in Intact Animals	176

6. Potential Limitations and Pitfalls	178
Acknowledgments	179
References	179
11. Optogenetics and Chemogenetics	181
Ksenia Vlasov, Christa J. Van Dort, and Ken Solt	
1. Introduction	182
2. Using Genetic Tools to Target Specific Neurons	183
3. Optogenetics	185
4. Chemogenetics	187
5. Stereotaxic Surgery	189
6. Control Experiments	193
7. Histology and Verification of Receptor Function	194
8. Summary and Conclusion	194
References	195
12. Genetic Reporters of Neuronal Activity: c-Fos and G-CaMP6	197
Andrew E. Hudson	
1. Introduction	198
2. Difficulties with Electrophysiology	202
3. c-fos as a Reporter of Neuronal Activity	205
4. Approaches to Use c-Fos as a Reporter of Neuronal Activation	207
5. Limitations of c-fos as a Reporter of Neuronal Activation	209
6. Reporting Calcium Influx with GECIs	209
7. Experimental Design with GCaMP6	213
8. Limitations of GCaMP6	215
9. Conclusions	216
Acknowledgment	217
References	217
13. Genomics and Proteomic Techniques	221
Jonathan Z. Pan	
1. Introduction	221
2. Procedures and Results	223
3. Summary and Conclusion	234
References	235
14. Neurochemistry of Anesthetic States	237
Ralph Lydic, Helen A. Baghdoyan, and Amanda L. May	
1. Introduction	238
2. Microdialysis for Analyte Acquisition and Drug Delivery	240

3. Application of Metabolomics for Anesthesiology Research	246
4. Conclusion	252
References	252
15. Brief Introduction to Electroencephalography	257
Alex Proekt	
1. What Does EEG Measure?	257
2. Technical Considerations for Recording EEG Signals	260
3. Brief Introduction to Spectral Analysis of the EEG	265
4. Multivariate Spectral Analysis: Coherence and Phase Lag Index	268
5. Effects of Anesthetics on the EEG	270
6. Concluding Remarks	273
References	273
16. Using Positron Emission Tomography in Revealing the Mystery of General Anesthesia: Study Design Challenges and Opportunities	279
Harry Scheinin, Emilee C. Alkire, Annalotta Scheinin, Michael T. Alkire, Oskari Kantonen, and Jaakko Långsjö	
1. Introduction	280
2. Anesthetic Induced Unconsciousness	282
3. Principles of PET	284
4. Imaging General Anesthesia with PET	285
5. Summary and Conclusion	298
Funding Statement	299
Conflict of Interest	299
References	299
17. Brain Imaging Using Hyperpolarized ^{129}Xe Magnetic Resonance Imaging	305
Simrun Chahal, Braedan R.J. Prete, Alanna Wade, Francis T. Hane, and Mitchell S. Albert	
1. Introduction	305
2. Experimental Protocol for HP ^{129}Xe Brain Imaging in Rodents	308
3. Experimental Protocol for HP ^{129}Xe Brain Imaging in Humans	316
4. Conclusion	318
Acknowledgments	318
References	318
